EDITORIAL NOTES.

While the report which the Amalgamated Copper Company has just published for the fiscal year ending April 30, 1907, is by no means full, it is at any rate gratifying that the organization in question has abandoned the policy of complete silence as to the business and finances of the combination. The statement of revenue for the year, which is as follows, does not in all probability include anything beyond the dividends which the parent company received from its subsidiary concerns:

Year ending April 30	1907	1906	*Increase*
Net income	$14,154,400	$9,161,537	$4,992,863
Dividends	11,926,312	8,848,554	3,077,758
Surplus	2,228,088	312,983	1,915,105
Previous surplus	9,255,695	8,942,712	312,983
Total surplus	11,483,783	9,255,675	2,228,088

It will be noted that the net income was equivalent to only about 9 per cent. on the outstanding capital stock, as compared with 6 per cent. in the preceding year. This accordingly falls far short of showing 15 or 20 per cent. earned by the Amalgamated Company, as was widely heralded as being the case when the price of Amalgamated stock was booming in the share market. It is, however, highly probable that if the full proportion of the earnings of its subsidiaries to which the Amalgamated might be entitled were included, the showing as to earnings of the latter would be considerably better.

Visible wheat supplies in this country and Canada decrease slowly from month to month. This is partly due to the enlarged receipts from the farms, and while, perhaps, the large interior movement in April may have been due to improved transportation facilities, it seems only fair to assume that the advance of 10 to 15 cents per bushel in prices in May had a loosening up effect upon farmers. Whatever the cause, it is significant that the movement in the five weeks ending with June 1 was more than double the movement in the same period of 1906, and showed an even greater gain over the same period of 1905. Thus the movement for this year (five weeks) was 18,665,912 bushels, against 9,012,962 bushels in 1906 and 7,833,298 bushels in 1905. There was a decrease of 8,222,000 bushels shown in United States and Canadian stocks for the month just passed, as against a decrease of 11,485,000 bushels a year ago, 9,508,000 bushels in 1905 and 13,042,000 bushels in 1904. The statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on June 1, 1907, compare with the same period of the three preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
June 1, 1907	71,325,000	1,844,000	73,169,000
June 1, 1906	40,347,000	3,349,000	43,696,000
June 1, 1905	27,532,000	1,461,000	28,993,000
June 1, 1904	27,985,000	2,078,000	30,063,000

When the figures for the United States and Canada are displayed separately, however, it is found that practically the entire decrease in visible stocks occurred in Canada, as the following figures show:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,403,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	53,112,000	30,385,000	83,497,000
May 1	54,450,000	26,941,000	81,391,000
June 1	53,633,000	19,536,000	73,169,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,180,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	49,082,000	21,482,000	70,564,000
May 1	42,878,000	12,303,000	55,181,000
June 1	34,996,000	8,700,000	43,696,000

The decrease in the United States from May 1 to June 1 was only 817,000 bushels, while the decrease in Canada was 7,405,000 bushels, or fully nine times as great. Taking the combined supply in both countries as a whole, also, it will be seen that stocks have decreased only 10,000,000 bushels from January 1 to June 1, while a year ago they fell off 33,449,000 bushels. Thus it is that the combined North American wheat supply on June 1 was fully 73,169,000 bushels, a gain of 29,473,000 bushels over a year ago at that date, and an increase of 44,176,000 bushels over the same date in 1905.

Improved conditions in the transatlantic freight and passenger business during the year 1906 naturally had a very favorable effect upon the position of the International Mercantile Marine Company, as is shown by the annual report of that organization for the year in question, which appeared this week. The following compares the results exhibited in the report with those of the preceding year:

	1906	1905	*Increase*
Gross voyage earnings	$35,931,412	$32,435,512	$3,495,900
Miscellaneous earnings	1,256,307	927,406	328,901
Total earnings	37,187,809	33,362,918	3,824,891
Gross expenses	29,155,178	27,456,174	1,699,004
Net earnings	8,032,631	5,906,744	2,125,887
Credits to insurance fund	791,959	864,159	*72,300
Total	8,824,590	6,770,903	2,053,687
Charges	3,795,836	3,880,055	*84,219
Surplus	5,028,754	2,890,848	2,137,906
Amount transferred from insurance fund	....	897,052	*897,052
Balance	5,028,754	3,787,900	1,240,854
Depreciation on steamships	5,000,000	2,000,000	3,000,000
Balance	28,754	1,787,900	*1,759,146
Previous surplus	250,152	†1,537,748	1,787,900
Profit and loss surplus	278,906	250,152	28,754

* Decrease. † Deficit.

While the increase in the total voyage earnings of $3,495,000 is eminently satisfactory, the principal feature of the report is that practically the entire surplus of over $5,000,000 was charged off for depreciation, and that the earnings were used in reducing loans. As shown by the balance sheet, the latter item, which at the end of 1905 aggregated over $6,300,000, was reduced on December 31 last to only about $768,000, and as this indebtedness was largely in the form of obligations created in connection with contracts for the construction of new vessels, the report would show a substantial increase in the aggregate value of the properties owned or controlled by the parent company.

The crop report of the Bureau of Statistics of the Department of Agriculture was responsible for some diverse movements in cotton prices this week, because of the issuance at one and the same time of an estimate of condition of the crop on May 25 and of a revision of acreage figures of a year ago in connection with an estimate of this year's planting. The large increase shown in the acreage this year over the published area of last year, coming without adequate explanation upon a nervous market, was responsible for a break in prices, which was partly regained when the large gain in acreage was explained in the later advices. It would seem as if the better plan would have been to have announced the revision in last year's acreage earlier in the month and to have confined the telegraphed crop report to a simple statement of crop conditions. The average condition of the growing crop on May 25 was 70.5, as compared with 84.6 per cent. and 77.2 per cent. at the corresponding dates in 1906 and 1905 respectively, and a ten-year average of 83.6 per cent. The following table shows, by states and for the United States, the revised figures of the area planted in 1906, in acres; the percentage of the area estimated to be planted in 1907 as compared with that planted in 1906; the area planted or to be planted in 1907, in acres, and the condition of the crop on May 25, in per cent.:

	Revised area of 1906	*Area in 1907 comp'd with 1906*	*Area in 1907*	*Condition May 25*
Virginia	37,000	100	37,000	80
North Carolina	1,409,000	102	1,437,000	80
South Carolina	2,463,000	100	2,463,000	77
Georgia	4,728,000	102	4,823,000	74
Florida	294,000	95	279,000	80
Alabama	3,733,000	94	3,509,000	65
Mississippi	3,460,000	94	3,252,000	65
Louisiana	1,778,000	96	1,707,000	64
Texas	9,076,000	104	9,439,000	70
Arkansas	2,139,000	94	2,011,000	65
Tennessee	822,000	93	765,000	63
Missouri	94,000	79	74,000	65
Oklahoma	1,102,000	120	1,322,000	80
Indian Territory	914,000	103	942,000	78
United States	32,049,000	100	32,060,000	70.5

The condition of the cotton crop on or about May 25 for a period of years is reported by the Agricultural Department as follows:

1907	70.5	1899	85.7
1906	84.6	1898	89.0
1905	77.2	1897	83.5
1904	83.0	1896	97.2
1903	74.1	1895	81.0
1902	95.1	1894	88 3
1901	81.5	1893	85.6
1900	82.5		

The May 25 condition of 70.5 is therefore the lowest with one exception—that of 1903—since 1893, fourteen years ago.

It will be remembered that when the denatured alcohol measure, so called, was up for consideration in the last Congress its advocates made great predictions for the future of the industry. Well, production in January started off with figures that promised much for the new line of domestic endeavor, but the output in subsequent months declined rather sharply. Thus, while the output in January amounted to 574,493 gallons, the production in March was only 240,778 gallons, and in April it was 270,206 gallons, to which sum Illinois contributed 240,787 gallons and Indiana 29,418 gallons. The reduced output is ascribed to what are regarded as drastic internal revenue regulations, but it is now understood that the bureau is engaged in revising the code, which covers the denatured industry along very liberal lines. It is said that the revisions will work a complete revolution in the industry, in that they will provide for the enforcement of the supplemental legislation enacted at the last session of Congress. Under the new revisions small distributers of completely denatured alcohol will be relieved of the necessity of keeping books and making periodical returns to the Internal Revenue Department. The use of tank wagons for local distribution will be permitted, and the cost of the container, which now constitutes a heavy ad valorem tax on the product, amounting to several cents per gallon, will be completely eliminated.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Labor—Lien—Artesian Well.

The Supreme Court of South Dakota held, in the case of Rolewitch vs. Harrington, that the drilling of an artesian well was within the meaning of a statute giving a lien for labor on any building or other improvement on land.

Illegal Agreement—Sale—Recovery.

The Supreme Court of South Carolina held, in the case of Packard vs. Bird, that the fact that an agreement for an exclusive agency for a certain class of goods was illegal under a statute prohibiting contracts in restraint of trade, did not prevent a recovery for a bill of goods sold under it.

Child's Wages—Father's Assent.

The Supreme Court of Georgia held, in the case of Culberson vs. Alabama Construction Company, that where a minor son without his father's consent makes a contract for his services with a third person, and the father knows that he is in the employment of such person, and neither makes any objections nor demands payment for his child's services from such employer, there is an implied assent by the father that the son shall receive his earnings in such employment.

Taxation—Brokers' Licenses.

The Supreme Court of Louisiana held, in the case of State of Louisiana vs. Pinckard et al., that the license tax levied on the business of cotton and stock brokerage by section 2 of act 214 of 1906 was graduated so as to make the smaller business pay in proportion 100 per cent. more than the larger business, and that such a classification was not the equitable graduation required by article 229 of the constitution of 1898 for the protection of the citizen against arbitrary taxation.

Insurance—Rebate—Premiums—Validity.

The Supreme Court of Wisconsin held, in the case of Laun vs. Pacific Mutual Life Insurance Company of California, that a life policy issued pursuant to an agreement to give the insured a rebate on the premiums payable thereon was valid notwithstanding the Wisconsin statute of 1898 prohibiting a life-insurance company from offering as an inducement to insurance any rebate of premium and authorizing a revocation of the license issued to any company violating the statute, and that the insured could not recover the premium paid.

Contract—Married Woman—Equity.

The Supreme Court of Minnesota held, in the case of Laythe et al. vs. Minnesota Land & Investment Company et al., that the mere fact that a transfer of a land contract to a mother by a married daughter was invalid because not also signed by the latter's husband did not entitle the husband and wife to have the deed set aside in equity and the title confirmed in the wife, where it appeared that the mother in fairness should have held the legal title. Equitable relief, the court said, is not granted as a matter of course, but only when an adequate appeal has been made to the court and such facts have been shown as to bring the case within some recognized principle of equitable jurisdiction.

West Virginia Debt Case.

The Supreme Court of the United States recently overruled the demurrer filed by the state of West Virginia in the original proceeding against that state by the state of Virginia, in which the latter state sought to compel the former to assume a portion of the indebtedness contracted by the latter before the creation of West Virginia. The court said: "When this court has ascertained and adjudged the proportion of the debt of the original state it would be equitable for West Virginia to pay, it is not to be presumed on demurrer that West Virginia would refuse to carry out the decree of this court. If such repudiation should be absolutely asserted, we will then consider by what means the decree may be enforced."

Fire Insurance—Explosives—Waiver.

A fire-insurance policy provided that it should be void if, without written permission indorsed thereon, there should be allowed or kept on the insured premises any one of certain enumerated substances "or other explosives," and that no officer or agent of the insured should have power to waive such provision except in writing indorsed thereon or attached thereto. No indorsement was made on the policy. Blasting powder, which was not one of the explosives enumerated, was kept on the premises by tenants, and from an explosion thereof the building took fire and burned. The United States Circuit Court of Appeals held, in the case of St. Paul Fire & Marine Insurance Company vs. Penman, that the phrase "other explosives" must be construed to include blasting powder, and that in an action on the policy it was error to admit parol evidence to show that the agent who placed the insurance knew that the building was to be occupied by miners as tenants; that they customarily kept blasting powder in their dwellings, and that he charged more than the usual premium on that account, the tendency of such evidence being to establish a waiver contrary to the terms of the policy.

Partnership—Sale of Interest—Debts.

In the case of Reddington vs. Franey, decided recently by the Supreme Court of Wisconsin, it appeared that a third person bought a partner's interest in a firm composed of the partner and a copartner. The partner on selling his interest agreed to pay the debts of the old firm. The new partner advanced money for discounting bills for goods for the new firm, but the copartner wrongfully used the same to discharge the debts of the old firm. There was nothing to show whether the new partner owed the firm, or the copartner owed it, or what would be the condition of the mutual accounts on the settlement of the business. The court held that the new partner was not entitled to recover from the retiring partner on the theory of subrogation, but that the new partner's right must be worked out by subrogation of the new firm.

State Banks—Federal Control.

Judge Ray, of the United States Circuit Court for the Northern District of New York, has rendered a decision on demurrer in the case of Lyons, Receiver, vs. Bank of Discount of New York, to the effect that the Comptroller of the Currency at Washington has the same power over state banks with branches in the District of Columbia as he has over national banks. This decision was based upon an amendment to the District of Columbia Code passed in June, 1906, providing that all banks organized in any state of the Union but having an office in which banking business is conducted in the District of Columbia shall make reports to the Comptroller of the Currency, and that the latter shall have power to take possession of any such bank or company for the same reasons, in the same manner and to the same extent as are provided in the laws of the United States with regard to national banks.

Taxation—Exemption—Manufacture.

In the case of The Shreveport Creosoting Company vs. The City of Shreveport, recently decided by the Supreme Court of Louisiana, the plaintiff company, claiming that it was exempted from parochial and municipal taxation for 1906 and three years thereafter under article 230 of the state constitution as manufacturers of articles of wood, brought suit to enjoin the assessing and tax collecting officers from assessing its property and collecting taxes thereon. The court found that the creosoting process on which the company's right to exemption was predicated was applied to crossties already existing as articles of wood and which it had purchased from a company that had already made them, and it held that the process in question was not creative in character but merely preservative. It therefore dissolved an injunction granted to the plaintiff company and dismissed its demand without prejudice.

Porto Rico's Land Laws.

The case of Romeu vs. Todd, decided recently by the Supreme Court of the United States, arose out of a contest over land in Porto Rico which the appellant sought to prevent the appellee from selling to satisfy a debt. In reversing a decision against the appellant by the District Court for Porto Rico, the Supreme Court said that in providing a government for Porto Rico Congress evidently intended to preserve to the people of that island the system of local law to which they had been accustomed, and that the court could not consistently with that enlightened purpose assent to the conclusion that the mere provision of the act by which a court was created to enforce the local law empowered the court so created to set at naught the local law by disregarding fundamental rules of real property governing in the island, thereby creating confusion and uncertainty and tending to the destruction of the rights of innocent third parties.

BUSINESS NOTES.

World's Silk Production.

The syndicate of the Lyon (France) Silk Dealers' Union has published an estimate of last year's production of silk throughout the world. The total is given as 20,160,000 kilos (kilo=2 1-5 pounds), as against 18,830,000 kilos in 1905, or a quinquennial average of 19,668,000 for the period of 1901-05. European production was 5,750,000 kilos of raw silk, compared with 5,495,000 in 1905; France produced 605,000 kilos, as against 632,000 in the preceding year. Indian exports—ports of Bombay and Calcutta—totaled 295,000 kilos in 1906, as compared with 280,000 in 1905, while shipments from Shanghai reached 3,980,000 and 4,010,000 kilos respectively, and Canton consignments 1,850,000 and 2,000,000 kilos. The Shanghai statistics include tussah and native-spun silks, while the Canton figures cover consignments to Bombay and British India.

The Missing Gold.

Of the great production of gold in the past ten years a surprisingly large amount cannot be located. The New York *Journal of Commerce* has prepared the following table giving the world's gold production since 1896, together with the gold holdings of government treasuries and banks of the leading countries, including the national banks of the United States:

	Gold production	*Held by banks*
1897	$238,810,000	$2,197,845,000
1898	287,430,000	2,265,515,000
1899	306,725,000	2,260,540,000
1900	254,575,000	2,458,950,000
1901	260,990,000	2,645,440,000
1902	296,740,000	2,841,545,000
1903	325,960,000	2,930,565,000
1904	346,890,000	3,288,105,000
1905	381,250,000	3,460,260,000
1906	400,000,000	3,600,000,000

This shows a total of $3,099,370,000 for the ten years, while banks and government treasuries have increased their holdings by only about $1,402,155,000. The Director of the Mint estimates world's consumption of gold in the arts at $80,000,000 yearly; ten years ago the estimate was around $60,000,000. This accounts for only $800,000,000 of a missing sum of nearly $1,700,000,000.

Japan's Economic Development.

Discussing Japan's economic development since peace with Russia was declared, Thomas F. Millard, in *Appleton's* for June, says there have been 314 new enterprises capitalized or old capitalizations increased, with an aggregate capital of $197,151,514 gold. This is nearly one-third the total capitalized industry of the country previous to the war. The enterprises represented in this enormous capitalization cover a wide field, but they nearly all belong in the category of what may be termed modern industries, in the sense applied in Japan. For instance, there are fifty-one new electrical companies, with an aggregate capital of $53,000,000 gold; ten new navigation and dock companies, with a total of $20,000,000; five new insurance companies, with a capital of $7,500,000. New banking concerns aggregate a capital of $11,000,000. There are eleven new steam railway companies, with $10,000,000 capital; fourteen new mining companies, with $6,500,000, while old corporations have increased their capital $34,000,000. To many of them direct government assistance is being given, while nearly all of them have had or hope to secure stimulation through the government by indirect methods. In addition to these activities, however, there is still a larger project in contemplation: a national corporation, with a proposed capital of $100,000,000 gold, to secure commercial control of Korea and Manchuria.

Canada's Progress.

P. T. McGrath, writing for the American *Review of Reviews*, points out that the population of the Canadian northwest has grown from 419,512 in 1901 to 808,863 in 1906, and that within the past five years 200,000 Americans have settled there, while of the 300,000 immigrants expected this year, one-third will be Americans. The fisheries of maritime Canada were valued last year at $14,200,000. During the past decade Canada's total foreign trade has grown from $239,000,000 to $552,000,000. Her railroads, in which $1,289,000,000 are invested, carried 30,000,000 passengers, 102,000,000 tons of freight and earned $106,000,000 last year. The paid-up capital of Canada's banks is $83,000,000 and the assets $767,000,000. The savings of her people, on deposit in the government and chartered banks, total $85 per capita, as against $4 in 1855, and the former amount does not include investments in private banks, loan and trust companies or kindred organizations. Mr. McGrath also states that 80 per cent. of the capital which is being invested in Canada's industries is coming from the United States. In another part of the magazine from which the foregoing statements have been extracted, we find that D. B. Dowling, of the Canadian Geological Survey, is credited with estimating that there is a possibility of extracting 150,000,000,000 tons of coal from the deposits of Alberta. In the southern portion of Saskatchewan it is figured that there are over 26,000,000,000 tons. At the same time a writer in the *World's Work* declares that only one-tenth of Canada's mineral regions have yet been explored. All Labrador, all Keewatin, all Mackenzie river, the most of the Peace river and Athabasca, nine-tenths of British Columbia, and the Yukon are still a terra incognita for the prospector. What these unknown mineralized regions may yield may only be inferred from discoveries daily being made. Two cases will illustrate—the uncovering of nickel and cobalt beds in northern Ontario.

Transactions on New York Stock Exchange

Transactions in stocks on the New York Stock Exchange for the month of May aggregated 15,755,363 shares, a decrease of 3,464,685 shares as compared with the previous month, and a decrease of 8,189,733 shares as compared with the corresponding month last year. Incidentally, the month's trading was the smallest recorded for any month since July, 1905. This table gives the sales of stocks and bonds during each of the last five months:

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	53,958,500
April	19,220,048	43,254,400
May	15,755,363	33,959,500
Total	106,724,202	216,379,900

Comparisons as regard stock sales follow:

Stocks (shares)	*May*	*January 1 to May 31*
1907	15,755,363	106,724,202
1906	23,945,096	127,807,113
1905	20,538,324	125,104,315
1904	5,260,135	45,649,876
1903	12,464,587	66,672,022
1902	13,485,777	79,734,271
1901	35,109,736	155,979,302
1900	9,487,084	58,653,854
1899	14,791,250	89,586,603
1898	9,174,552	43,314,382
1897	4,211,788	18,035,699

Bond dealings for the month and from January 1 make the following showing as compared with preceding years:

Bonds (par value)	*May*	*January 1 to May 31*
1907	$33,059,500	$216,370,000
1906	60,856,100	342,562,800

National Bank Organizations.

In May charters were granted to fifty-two national banking associations with aggregate capital of $2,746,000, and bonds deposited as security for circulation to the extent of $618,850. Thirty-seven of the banks chartered during the month were with capital of less than $50,000, the aggregate being $996,000, and fifteen with capital of $50,000 and over, aggregating $1,750,000. From March 14, 1900, to May 31, 1907, charters were granted to 3,455 banks with aggregate capital of $203,057,300, of which 2,242, with capital of $58,469,500, were organized under authority of the act of March 14, 1900, and 1,213, with capital of $144,587,800, under the act of 1864. The number of banks in existence in 1900 was 3,617, and on May 31, 1907, had been increased to 6,472. The authorized capital was increased from $616,308,095 to $892,970,275, and the circulation outstanding secured by bonds and by deposits of lawful money from $254,402,730 to $601,940,550. Summary, by geographical divisions, of national banks organized from March 14, 1900, to May 31, 1907:

	No. banks	*Capital*
New England states	40	$5,515,000
Eastern states	569	44,426,500
Southern states	873	49,383,500
Middle-western states	968	60,947,500
Western states	796	26,686,000
Pacific states	204	15,398,800
Island possessions	5	700,000

During the period from May 14, 1900, to May 31, 1907, the state of Texas organized 376 banks with a capital of $17,015,000, and Pennsylvania 334 banks with a capital of $24,402,000. These two states head the states in the number of banks and capital.

CURRENT BUSINESS NEWS.

Commercial.

It is believed by many that this year's continental wheat crop will show a deficit of 10 per cent. compared with last year's reduced yield, which was itself more than 100,000,000 bushels below 1905. In general, and in spite of the improved Russian outlook, European crop prospects are still distinctly unfavorable. Official indications and private reports guaranteed as reliable by Beerbohm indicate the possibility of a deficit in Europe's entire wheat crop of 30,000,000 quarters, or 240,000,000 bushels, compared with last year. The outlook for the yield of the United States and Canada is taken in London to suggest a further possible decrease from 1906 of 20,000,000 to 25,000,000 quarters.

Germany's total imports in 1906 were $2,008,482,000, as against $1,769,768,000 in 1905 and $1,633,632,000 in 1994; exports, $1,546,286,000, as against $1,390,158,000 in 1905 and $1,264,970,000 in 1904.

Following comparative figures of companies incorporated in the eastern states during May with an authorized capital of $1,000,000 or more are taken from returns published by the *Journal of Commerce*:

	1907	1906	1905
January	$267,340,000	$411,945,000	$116,250,000
February	210,700,000	202,650,000	98,600,000
March	195,650,000	105,374,000	192,645,000
April	134,250,000	232,080,000	180,111,111
May	122,250,000	135,300,000	249,250,000

According to the *American Agriculturist*, the outlook for the hay crop at the close of May was reasonably good throughout the middle and eastern states.

An agreement providing for the establishment of a Chinese maritime customs office at Port Dalny was signed May 31 by Sir Robert Hart, Director-General of the Chinese Customs, and M. Hayashi, Japanese minister to China.

The Missouri crop report makes the June 1 condition of wheat 80, against 82 last month and 77 last June, but improved later last year, and crop was 36,000,000 bushels. Some damage southeast and southwest by army worm and plant louse. Corn condition 74, against 76 last year, with October condition 90, and crop 234,000,000 bushels; 79 per cent. of acreage planted; acreage estimated at 99 per cent. of last year. Oats condition 75, against 75 last month and 48 last year, and crop only 15,000,000 bushels. Some damage from plant louse; warm showers needed.

Snow, the crop reporter, places the June 1 condition of winter wheat at 75.2, as against 76 1 on May 1. He estimates the total crop at 600,000,000 bushels, 250,000,000 bushels being spring wheat.

On Tuesday the Weather Bureau issued its weekly summary of conditions throughout the United States. It read as follows: "The Florida peninsula, the Pacific coast states and the western portions of the middle and northern plateau districts experienced a week of favorable temperatures. Elsewhere abnormally cold weather continued throughout, although the deficiency in temperature has been less marked in Minnesota and North Dakota, where the week was the most favorable of the season thus far. Abnormally cold weather also prevailed in the central valleys and the Atlantic coast and gulf districts. Light to heavy frosts were general in the lake region, Ohio valley, New England and middle Atlantic states, light frosts occurring as far south as western North Carolina, northern Alabama and Arkansas, portions of the lower Ohio valley, southern Louisiana, and a large part of Texas suffered from very heavy rains, which caused destructive freshets. Light snow and sleet occurred in the lower lake region on May 27. Unusual cloudiness prevailed in nearly all districts east of the Rocky mountains. There was, however, somewhat less cloudiness than in the northern districts west of the upper lake region."

The *Financial Chronicle* estimates the cotton acreage at 33,079,425 acres, the increase over last season being 4.82. The important gains were chiefly in the new cotton territory. This authority is of the opinion that there will be sufficient labor to handle the crop, despite reports to the contrary.

Telegraphic advices have been received by the Department of State from Minister Leishman to the effect that the agreements of the Sublime Porte in regard to the granting of customs immunities have been put into practical execution. It is expected that the removal of the restrictions upon cotton-seed oil will lead to a considerable extension of its use in Turkey.

The Appraiser of the Port of New York reports that the appraised value of imported precious stones and pearls for May, 1907, is $2,981,435, as compared with $4,021,405 for the same month last year. Also that 120 automobiles of the total value of $409,926 were imported in May, 1907, in comparison with 134 cars valued at $466,230 in May, 1906. Five hundred and four cars valued at $1,671,222 have been imported through New York since January 1, 1907, compared with 586 valued at $1,934,092 in the same period of 1906. The increase in total appraised value of general imports for May, 1907, over the same month in 1906 is approximately $10,000,000, or 17 per cent.

The Ohio crop report for June 1 shows an unexpected improvement, the condition of wheat being placed at 77, against 74 on May 1 and 95 last year, when the crop was 43,000,000 bushels, the largest on record. The condition of oats is placed at 81, against 73 a year ago, when the crop was 48,000,000 bushels.

A proposal has been made in the French Chamber of Deputies to suspend the duties on wheat and flour temporarily.

The following table, compiled by the *Journal of Commerce*, shows fire losses by months:

	1905	1906	1907
January	$16,378,100	$17,723,800	$24,064,000
February	25,591,000	18,249,350	19,876,600
March	14,751,400	18,727,750	20,559,700
April	11,901,350	292,501,150	21,925,900
May	12,736,250	16,512,850	16,286,300
Total, 5 months	81,358,100	363,714,900	102,712,500

The official Hungarian crop report makes a decrease in wheat acreage of 10.8 per cent.; indicated crop 113,600,000 bushels, against 189,600,000 last year. Rye, indicated crop 36,000,000, against 50,400,000 final last year. Corn shows an increase of 715,000 acres.

The N. K. Fairbank Company estimates stocks of lard held in the United States, Europe and afloat therefor on the dates mentioned: June 1, 1907, 290,662 tierces; May 1, 1907, 234,844; June 1, 1906, 248,229; June 1, 1905, 354,205; June 1, 1904, 276,025; June 1, 1903, 150,288.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News*: United Kingdom—Weather unseasonably cold, and further fears are expressed regarding crops. France—The outlook is satisfactory, although warm weather is wanted. Supplies are moderate. Germany—Weather is unseasonably cold and crops are backward. In some parts rye has commenced flowering. Hungary—Moderate improvement in crops. Roumania and Bulgaria — Further rains have fallen. Outlook for the corn crop is hopeful. It is expected, however, that there will be only half a wheat crop. Turkey — Crop outlook unfavorable. Russia—In the southwest the condition of winter crops is bad, while for spring crops it is moderate. In the south and central south the condition of both the winter and spring crops is medium, while in the southeast and east the timely rains have improved the outlook. In the west the condition is rather poor. Supplies at the ports are moderate. Italy and Spain — The outlook for crops continues favorable. North Africa—Harvest returns are rather disappointing.

The Kentucky June report makes the condition of wheat 82, against 89 May 1, and 76 in June, 1906.

Financial.

The *Evening Post* says: "The fact that scarcely half a dozen industrial companies have resorted to short-term borrowing this year, and that the notes issued by them aggregated less than $50,000,000, as against $300,000,000 put out by the railroads, has directed attention to the better position of these companies to-day than that which they showed when the reaction of 1903 set in."

On June 1 Governor Stuart, of Pennsylvania, signed the bill putting bucket shops out of business in that state.

The total coinage of the United States mints during May amounted in value to $8,463,410, and of this amount $7,208,568 was in gold eagles and double eagles. The silver coinage comprised 6,533,000 pieces, valued at $1,016,500. The minor coinage consisted of 4,771,000 nickels. For the Philippine government 2,424,000 pesos and centavo pieces, and for the Mexican government 1,800,000 50-centavo pieces, were also struck off.

At the annual election of the New York Cotton Exchange, James H. Parker, Edmund M. Weld and James F. Maury were elected president, vice-president and treasurer respectively. In addition, Marcus J. Parrott, Leopold S. Bache, George Brennecke, A. B. Gwathmey, Jr., J. A. Hartcorn, T. E. Hicks, S. T. Hubbard, George F. Jones, C. I. Long, L. Mandelbaum, William Mitchell, William Mohr, William S. Ray, R. Siedenburg and E. P. Walker were elected managers.

The output of gold from Transvaal mines in May is estimated by London Kaffir houses at 500,000 ounces fine, a decrease of 37,000 ounces from the April outturn, but inference and forecast are difficult, owing to the strike in the Rand. Comparison of the value of last month's output with previous months, and with May in other years, is as follows:

May, 1907	$10,625,000	May, 1906	$9,795,310
Apr., 1907	11,405,500	May, 1905	8,843,670
Mar., 1907	11,436,950	May, 1904	5,679,125
Feb., 1907	10,482,170	May, 1903	4,972,525
Jan., 1907	11,418,705	May, 1902	2,943,730
Dec., 1906	11,684,850	May, 1901	156,355
Nov., 1906	11,328,125	May, 1900	None
Oct., 1906	11,481,850	May, 1899	8,291,340

With the taking off of the dividend, British consols on Tuesday broke the previous low record of the year, reaching 83¾, the lowest point in sixty years.

On Monday the members of the New York Produce Exchange elected William H. Douglas president, W. H. Smith vice-president, and C. W. Bowring, T. S. Young, James Barker, Lyndon Arnold, Charles F. Coffin and A. R. Bradley, managers.

The directors of the American Car & Foundry Company on Monday declared a quarterly dividend of 1¾ per cent. on the preferred stock and 1 per cent. on the common. The preferred dividend remains unchanged on a 7 per cent. basis, as it has been since 1901, but the common dividend is an increase over last January, when one-half of 1 per cent. was declared. The most recent declaration puts the common stock on a 4 per cent. basis.

The receipts from the stock-transfer tax law during the month of May amounted to $318,194, a decrease of $78,911 from the returns of April, or 19 per cent., and a decrease of $185,377 from May, 1906, or 36 per cent. The appended table shows the returns from the stock-transfer tax law by months:

	1907	1906
January	$509,478	$911,321
February	309,048	490,498
March	683,271	427,498
April	397,105	560,300
May	318,194	503,571

Practically all the eighteen savings banks of Manhattan that paid depositors 4 per cent. last year will make a like allowance for the six months ending with June.

Three underwriting syndicates were dissolved Tuesday, and in each case the members of the syndicate were asked to take over a considerable number of bonds of which the syndicate managers were unable to dispose. The most important was the syndicate headed by J. P. Morgan & Co., which last July underwrote an issue of $10,000,000 4 per cent. bonds of the Atlanta, Knoxville & Cincinnati division of the Louisville & Nashville Railroad. They were underwritten at 98, and it is said that only 10 per cent. of the issue has been sold. Another syndicate dissolved is that headed by Brown Bros. & Co. It underwrote last year $5,000,000 Norfolk & Western 4 per cent. divisional general mortgage bonds of 1944. Only part of the issue has been disposed of. Mackay & Co. also headed a syndicate to float $3,000,000 6 per cent. debenture sinking fund bonds of Park & Tilford, issued last year, which has been dissolved. In this case, however, only about $100,000 is said to have been left on the hands of the members of the syndicate.

On Tuesday a seat on the New York Stock Exchange was sold for $75,000. The last previous sale was $79,000.

On Tuesday the Ohio Supreme Court decided the suit of the city of Cleveland against Reynolds, the so-called 3-cent fare case, the decision being a victory for the Cleveland Consolidated Railways Company, and a blow at low fares. The case involved the validity of the street car franchises in Cleveland. The Circuit Court upheld the validity of the franchises of the Consolidated Railways Company, and the Supreme Court sustained this decision.

Directors of the American Telephone & Telegraph Company at a meeting Tuesday voted to issue $21,925,200 of new stock at par to stockholders of record June 15. Holders will be entitled to subscribe to one new share for every six now held, but subscriptions must be for full shares. Rights to subscribe will expire June 25.

James B. Forgan, president of the First National Bank of Chicago, has resigned as a director of the Chicago & Alton Railroad.

It is said the new business of the United States Steel Corporation in May ran 2,500 tons per day ahead of the corresponding month last year. About 75,000 tons more new business was received in May, 1907, than in May, 1906.

The American Smelting & Refining Company has declared a quarterly dividend of 2 per cent. on its common stock, an increase of one-quarter of 1 per cent. quarterly, placing the dividend rate on a basis of 8 per cent. per annum.

The preferred and common stocks of the New Mexico Railway & Coal Company have been stricken from the New York Stock Exchange list.

The Hocking Valley has declared a semi-annual dividend of 2 per cent. on its common stock, an increase of one-half of 1 per cent. over the previous payment, and places the stock on a 4 per cent. basis.

Railroads.

At the annual meeting of the stockholders of the Pennsylvania Company in Pittsburgh, Tuesday, the old board of directors was reëlected.

The Pennsylvania Railroad Company has decided to adopt a flat 2-cent-a-mile rate to all suburban points in Pennsylvania, and the railroad will sell no commutation tickets at all. Even ten ride, package and workmen's tickets will be done away with. Excursion tickets will not be sold after September 30 either, if the road does not succeed in having the new Pennsylvania 2-cent fare law declared unconstitutional.

Industrial.

Statistics compiled for the Geological Survey by Edward W. Parker, coal mining expert of the survey, show a remarkable increase in the total production of coal in the United States during 1906 over the preceding year. The production in 1906 was 414,039,581 short tons of 2,000 pounds, valued at $512 610,744. In 1905 the output amounted to 392,919,341 tons, valued at $476,756,963. The increase in quantity was 5 per cent. and in value 7 per cent. West Virginia supplanted Illinois as the state second to Pennsylvania in coal production, attributed chiefly to the almost complete suspension of mining in Illinois during all of April and a part of May, when the miners and operators were in conflict over the wage scale.

A cablegram from Col. Goethals, chief engineer of the Isthmian Canal Commission on the Isthmus, says that the excavation in the Culebra Cut for the month of May was 690,365 cubic yards and at Gatun 70,360 cubic yards. While this shows a decrease from the excavation for March and April, due chiefly to the rainy season, it is a large increase over May, 1906, when the total excavation for the month was 194,645 cubic yards. This is, in fact, the largest total excavation for any single month, except for the months of March and April of this year.

The total output of platinum in Russia during recent years is given below, in ounces:

1894	203,250	1903	226,000
1896	200,000	1904	190,120
1898	203,100	1905	200,450
1900	212,500	1906	210,318

The *Wall Street Journal* reports that all the leading industrial interests have done an immense business this spring. The Standard Oil's business has been the largest in its history. The General Electric Company reports business in excess of the first quarter of 1906. The United States Steel's new business is 20 to 30 per cent. in excess of the first quarter of last year. The Railway Steel Spring, the Westinghouse Electric, the Republic Iron & Steel, the Tennessee Coal & Iron and the American Car & Foundry all report record-breaking orders. New business with the United States Rubber exceeds last year's by 30 to 40 per cent. The Allis-Chalmers people report that business in the last eight months is double that of a year ago, and orders on hand are the largest in its history. The International Harvester and Corn Products companies say business is in excess of the corresponding quarter in 1906.

R. W. Wallace, K. C., chairman of the Automobile Club, announces a remarkable scientific discovery which promises to solve the problem of substituting alcohol for petrol as the fuel for automobiles. The cost of alcohol, which is 18d. a gallon in London, has hitherto prohibited its general use in motor cars. It is said that a chemical investigation, which was carried on for years, has now resulted in finding means by which alcohol distilled from peat may be manufactured and sold at considerable profit for 3d. (6 cents) per gallon.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Cross currents in trade and crop conditions prevent generalization. There has been a further slight improvement in crop conditions, due to slightly higher temperatures west and south and a cessation of rain in the cotton belt. This has made for a more optimistic feeling as to ultimate yields and future trade in the sections enjoying even a small share of seasonable weather, but the great majority of cities, and particularly those in the eastern half of the country, complain of continued slow retail trade and collections. These unfavorable conditions are, in turn, reflected in more general complaints of the absence of the expected volume of reorder business from jobbers and manufacturers, who are also beginning to reëcho the reports of accumulating stocks of light spring and summer fabrics. Reduction sales are more in evidence in retail lines, and the feeling is that some of the trade lost in the past two months will not be regained. On the other hand, the reports as to fall trade are quite satisfactory, a reflection, possibly, of the fact that retail stocks of heavy goods were well cleaned up last winter. Crop uncertainties, and the fact that reorder business this spring has been practically absent in many lines, however, induce conservatism as to future ordering, and there is less disposition to embark freely in future commitments until the situation becomes clearer. Reflection of the rather better crop advices, particularly in spring wheat, is found in lower prices of the latter cereal, but confidence in smaller yields, both at home and abroad, has steadied prices after a smart early decline. Trade sentiment at present rather favors a government report pointing to about 600,000,000 bushels as the possible June 1 promise, but the lowest condition of cotton reported at this season for many years strengthens cotton prices. May statistics of failures point to only slight increases in failures and liabilities in that month over a year ago, while clearings totals, though reduced heavily by speculative dullness at New York, show good gains at most centers outside of the metropolis. Railway earnings returns for May point to very large gains in gross receipts, and advices are that car congestion has been largely relieved, but increased cost of operation has cut April net returns very heavily.

Crops have done better this week, but unseasonable temperatures retard progress, and final harvesting returns are needed to fix yields. No crop so far indicates a yield equal to last year's. Spring-wheat reports show continued improvement, but area is short 10 to 15 per cent. Winter wheat has improved, but Kansas reports are contradictory. Freeze damage on May 26 is reported now becoming visible, but extent cannot be estimated yet. Nebraska reports cold weather retarding progress. In the Pacific northwest all crops, except hops, are in excellent shape; the latter yield is reported curtailed by lack of rain. Corn is late and grows slowly, much replanting being necessary. Oats and hay will be short crops.

Long-expected and much-needed sunshine has helped cotton, and the feeling at the south is better. General complaint is, however, that the crops are small, weedy and late. Cool nights retard growth. Late heavy rains in Texas have put the plant back. Little or no gain in acreage is indicated and much replanting is necessary. Sugar cane and rice are in good condition in Louisiana and melon shipments from Florida are large, but the Georgia peach crop will be small.

Bad crop reports from the south during April and May find confirmation in the very low condition of 70.5 per cent., reported by the Department of Agriculture, on May 25, as against a condition of 84.6 per cent. on May 26 a year ago, 77.2 per cent. on the corresponding date in 1905, and a ten-year average of 83.6 per cent. The lowest condition heretofore reported for fourteen years past was 74.1, on June 1, 1903. The department report gives the acreage planted or to be planted as 32,060,000 acres, as against a revised estimate of 1906 planting of 32,049,000 acres. Other estimates of planting run as high as 4 to 5 per cent. in excess of a year ago.

Except for an increase in the number of failures at New York City, the May statistics of failures make a fairly good comparison with a year ago. There were 755 failures reported to BRADSTREET'S for that month, with liabilities of $10,542,895, an increase of 8.6 per cent. in the number and of 4.3 per cent. in the failure damage as compared with May a year ago. Two-thirds of the excess in number of failures over a year ago is found in New York City. There are more failures in New England, the middle group, the northwest and the far west, but fewer in the west and south.

Visible wheat supplies in this country and Canada decrease very slowly. This is probably due to higher prices and improved transportation facilities allowing a larger movement from the farms. Thus, in the United States receipts at primary points for five weeks ending with June 1 are more than double those of a year ago in the same period. Decreases in visible supplies are, in fact, confined almost entirely to Canada. Thus, the decrease in the United States from May 1 to June 1 was only 817,000 bushels, while the falling off in Canada was nine times as great. The aggregate visible supply on June 1 was only 10,000,000 bushels less than on January 1, while a year ago the decrease in the same period was 33,449,000 bushels. The total stock in the United States and Canada on June 1 was 29,473,000 bushels larger than a year ago, and 44,176,000 bushels heavier than on June 1, 1905.

Pig iron markets are very quiet, but furnaces are sold so far ahead that producers are not uneasy over the absence of business. New business in steel rails is of moderate proportions. Demand for structural material is only fair, though some large orders are said to be pending. An impression prevails that orders for cast-iron pipe will be reduced owing to the high level of prices. Sheet as well as plate producers are in a position to make better deliveries. Demand for tin plate is not quite so active, but the mills are very well fixed with orders. In the west demand for steel bars is still heavy. Coke continues weak, production being above demand. Electrolytic and casting grades of copper are easier in price and domestic business is light.

Reduced stock speculation at New York largely accounts for the smallest total of clearings in May reported since February, and, with that exception, the smallest month's total since last summer. The decrease at New York, in fact, explains the decrease shown in the country at large, because outside of New York the May total has been only exceeded five times in the country's history. Clearings at ninety-seven cities are 2 per cent. smaller than those of April, and 6.6 per cent. less than those of May a year ago. New York City's clearings are 4.3 per cent. smaller than April, and 16.5 per cent. smaller than May a year ago. Outside of New York the May total is 13.5 per cent. larger than in May, 1906.

Rather more favorable reports as to wheat, good rains in parts of the winter-wheat belt and higher temperatures, with advices that spring wheat was growing well, caused liquidation, and futures fell 1½ to 2 cents here, and Chicago cash wheat fell 4 cents up to Tuesday. Covering at the decline and reports of better export demand firmed prices slightly on Wednesday, and stories of frost damage in Kansas on Thursday caused further strengthening. Foreign reports confirmed earlier advices of poor European crops, particularly in the southeast. On Friday a sharp advance was engineered on a report, later denied, that the Kansas state crop bureau would show a condition of only 52 on June 1, as against 82 on May 1. The close found prices of options at New York 1½ cents below last Friday, while Chicago July was 3 cents off. Corn was steady without much change, but July oats fell 5 cents at Chicago on the week.

Cotton was very irregular, advancing and reacting daily with wide swings on alternate crop-damage reports and advices of better weather. The government report on Tuesday caused a break of 12 to 16 points. On Friday the market showed an excited spurt, July closing 40 points higher than Thursday, and 39 points higher than last Friday, on talk of heavy European buying and bad crop reports. Spots advanced 35 points on the week, 25 points of this on Friday.

The New York stock market is strong, with substantial advances due to covering of shorts, caused mainly by more favorable crop advices and the absence of reported trouble in the foreign markets. Dividend increases by industrial companies like American Car & Foundry and American Smelting common are favorably regarded. Bonds continue very dull, but Japanese government issues are notably strong. Foreign exchange is very high, demand sterling rising to 4.87.05. Gold exports from New York to Paris have continued on a large scale, amounting for the week to $7,100,000, and since the movement began, to $10,400,000.

Bank clearings for the week ending June 6 aggregate $3,039,828,000, 40 per cent. over last week (a holiday period) and 3 per cent. over this week last year. Outside of New York exchanges amount to $1,216,719,000, 39 per cent. more than last week and 12 per cent. over the corresponding week last year.

Business failures for the week ending June 6 number 155, against 142 last week, 162 in the like week of 1906, 194 in 1905, 171 in 1904 and 181 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending June 6 aggregated 5,263,138 bushels, against 2,401,994 bushels last week, 3,301,007 bushels this week last year, 1,476,840 bushels in 1905 and 4,600,055 bushels in 1902. For the past forty-nine weeks of the fiscal year the exports are 160,944,898 bushels, against 128,627,113 bushels in 1905-06, 60,012,250 bushels in 1904-05 and 239,288,446 bushels in 1901-02. Corn exports for the week are 1,135,065 bushels, against 864,255 bushels last week, 573,139 bushels a year ago and 1,108,146 bushels in 1905. For the fiscal year to date the exports are 68,748,026 bushels, against 103,506,840 bushels in 1905-06 and 75,987,211 bushels in 1904-05.

IN CANADA.

Weather and crop conditions are slightly better in Canada, and good reports come from the western wheat crop, which has been benefited by good rains. The area planted is smaller than a year ago, however. Past backward weather is reflected in reports of poor retail trade and of a lack of reorder business with jobbers and wholesalers. It is noted, however, that while immediate business is light with wholesalers, fall business is active, pointing to small stocks having been carried over from last winter. Industry and building are active and the hardware trade is good. The late strike of longshoremen has caused great congestion of inward-bound freight at Montreal. Unless weather warms up a light sorting trade is looked for at Toronto. More optimistic reports come from Winnipeg, and the wheat plant is well rooted, though the acreage planted is smaller. Trade is good on the Pacific coast and wheat-flour shipments to Asia are heavy. There were 88 failures in Canada, involving $680,582 in liabilities, in May this year, as against 93 failures, with liabilities of $747,082, in May a year ago. Canadian clearings for May exceed those of a year ago by 12.8 per cent., while for five months the excess is 10.7 per cent. Failures for the week number 18, as against 14 last week and 17 in this week a year ago. Clearings for the week aggregate $89,199,000, a gain of 22 per cent. on last week and of 7 per cent. over this week a year ago.

BETTER CROP REPORTS.

WEATHER STILL TOO COLD, BUT SOME PROGRESS MAKING. SPRING WHEAT DOING WELL. WINTER WHEAT MIXED. KANSAS REPORTS CONTRADICTORY. ESTIMATES OF TOTAL WHEAT CROP, 600,000,000 BUSHELS. CORN PROGRESS SLOW. MUCH REPLANTING. OATS SHORT. HAY HURT. FLAX AREA LARGE. HOPS IN OREGON SHORT. HOT WEATHER HELPS COTTON IN CENTRAL SOUTH. TOO MUCH RAIN IN TEXAS. NIGHTS COOL. GROWTH AND STANDS BEHIND LAST YEAR. ACREAGE WILL BE SMALLER. MUCH REPLANTING NECESSARY. SUGAR AND RICE DOING WELL. FLORIDA MELON CROP LARGE. GEORGIA PEACH CROP SMALL.

CHICAGO.—The weather continues irregular, but it is fairly favorable for crops. Winter wheat has improved in the central regions, but very bad reports come from Kansas as the result of a freeze on May 26, claims of damage of 25 to 60 per cent. being made, and it will take threshing returns to tell the extent of the injury. Reports regarding spring wheat in the northwest are more favorable, and another week of warm, growing weather will go far toward offsetting the effects of cold and backward conditions. Prospects are not so good as a year ago, and the acreage is estimated at 10 to 15 per cent. short. The government crop report, due Monday, is expected to show a condition around 78 for winter wheat and a yield of 385,000,000 bushels. The spring-wheat condition is estimated at 86, with the prospect of 235,000,000 bushels, or a total wheat yield of 620,000,000 bushels. More than the usual amount of replanting of corn has been necessitated, owing to cold, wet weather, and growth is slow, with prospects in the leading corn sections not so good as last year. Oats have slightly improved in best regions. The stand is somewhat irregular, but the crop will be largely short of last year's. Hay in Iowa, Illinois and Kansas promises to be short, and in Indiana and Ohio fair, but it is late. Seeding of flax is being finished in the northwest, with a good acreage, which is somewhat above last year's.

INDIANAPOLIS.—Crops are in good condition, though in several localities the green bug and army and cut worms are reported to be doing some damage.

CINCINNATI.—Corn planting is delayed by rain. Wheat looks well. Oats not so assuring. Low meadow lands are in poor shape.

DAVENPORT.—Frost is reported, but the weather is not what it should be for growing crops. Rain is plentiful.

DES MOINES.—Unfavorable and abnormal weather conditions indicate only fair corn-growing conditions. The stand is uneven and a large amount of replanting is necessary. Indications are that small grains will show yields 25 per cent. under last year's.

SIOUX CITY.—The weather is warmer. Corn is all planted and some of it is up. Sunshine is needed.

MINNEAPOLIS.—Reports from various sources throughout the northwest indicate very satisfactory conditions as to the growing crops.

ST. PAUL.—Crop reports from all over North Dakota and Minnesota are favorable, although the growth, which was becoming rapid, was retarded by recent cold weather, and moisture is lacking in places. Small grain is looking healthy and strong but is a little backward. Corn is up in places. Pastures are becoming plentiful. Fruit trees are loaded with blossoms. On the whole, conditions are hopeful.

ST. LOUIS.—Crop conditions are much unsettled. However, the weather has been more favorable for corn and wheat as well as cotton. Winter wheat has been heavily damaged, but

the amount cannot be determined with any degree of certainty until harvest.

ST. JOSEPH.—The condition of wheat in this territory is somewhat improved. Four counties are excellent, and the balance 50 to 80 per cent. of a crop.

OMAHA. — Crops have not improved, the weather being unseasonable.

WICHITA.—Corn is backward. Moisture is needed. With favorable conditions, wheat will make 50 to 70 per cent.

KANSAS CITY.—Reports as to the Kansas wheat crop are still varied, but are more favorable than a week ago. In many sections the crop is reported to be one to two weeks behind this time last year, but judges are of the opinion that if favorable weather ensues Kansas will yield between 60,000,000 and 70,000,000 bushels. While warm weather is needed for growing corn, the crop is starting out well, and the acreage is increased over last year's.

CHARLESTON.—Cool nights still retard the growth of cotton, which is now about two weeks late.

ATLANTA.—A few days of sunshine have helped cotton, which is still far from being in a healthy condition. The crop is very late, and it will take favorable weather to produce anything like a normal crop. The few peaches that escaped the early spring freeze are very faulty, and shipments will be small.

AUGUSTA.—Cotton is progressing slowly on account of unfavorable weather.

MACON.—Continued cold weather retards the growth of cotton.

MONTGOMERY.—Cotton appears to be in an unhealthy condition, owing to cold weather.

JACKSONVILLE.—Crops have improved under favorable weather. Melons are moving in good supply.

MEMPHIS.—Hot, sunshiny weather now favors growing crops. Cotton and corn are one month late. In some sections cotton has a good stand but is grassy. In other sections replanting is necessary.

LITTLE ROCK.—All crops are late and cotton is unusually small. Acreage is about same as last year.

NEW ORLEANS.—Clear, warm weather during the past few days has had a stimulating effect in the cotton section. Reports indicate a heavy curtailment of the acreage due to damage, and the crop is backward, but seasonable weather will improve the situation rapidly. Nights are still cool, but everything now indicates steady summer-like weather. Sugar cane and rice are in good condition.

DALLAS.—Continued rains have fallen throughout this district, causing a great deal of damage. Corn is not doing well. Cotton that is up is very weedy and not in good condition; in some sections it has been replanted several times, and considerable acreage has been abandoned.

FORT WORTH.—Excessive rains in some sections, with cool weather, are hurting cotton a great deal. The plant looks bad and hot sunshine is needed. The outlook is not encouraging.

WACO.—The past few days of dry weather will prove very beneficial to cotton farmers, who are behind with work. Much damage is expected from boll weevils.

PORTLAND, ORE.—Crops are reported in excellent condition, excepting hops, which lack moisture and consequent cultivation. This crop will be less than last year's.

TRADE REPORTS.

At New York business in the dry-goods trade continues satisfactory, but on account of weather conditions some departments have felt severely the loss of sales, notably in goods manufactured for men's and women's spring wear. With this exception trade has been good, cotton goods still leading. Silks and dress goods are in fair request. There has been some falling off in worsteds and woolens for men's wear, and the amount of business transacted for the week in this line has been only moderate; collections generally are reported good. Yarns, both cotton and worsted, continue scarce and dear, and spinners cannot keep up with manufacturers' demands; even those who placed their orders in advance find difficulty in obtaining requirements. The cloak, suit and waist trades are experiencing the worst season in years; collections are slow and orders for future delivery limited. Trade in men's furnishings continues brisk and of large volume, demand for shirts, gloves and neckwear being very active and business profitable. In knit goods and hosiery, business has declined, owing to weather conditions; collections are slow, and several small failures have been announced. There has been some inquiry for rags, but the amount of business transacted was of limited proportions. Trade in groceries at retail is fairly good, but money is not circulating so freely as it was. Butter is firm and receipts are light. Receipts of eggs continue large, and they are still being stored. Supplies of southern-grown vegetables are moderate, though demand and price are both good. There has been an advance of from 5 to 8 cents per 100 pounds in the price of beef of all grades, and supplies of meats, both dressed and on the hoof, are only moderate. Business in tobacco is restricted, a fall in price being expected when the new crop comes on the market. Manufacturers of cigars are not rushed with orders, and retailers complain of poor business. Hardware feels the effect of unseasonable weather, and business, though still considerable, shows a falling off. Manufacturers of gas fixtures also report less trade. Collections in all lines where metals are used are still difficult to make. Structural steel is in good demand. Pig iron and pig tin are quiet and prices slightly lower. Copper is only in limited request. In automobiles and supplies the falling off in business is very pronounced, and the volume of trade in these lines compares favorably with that of the same period last year. This is attributed to the combined effects of an unsettled stock market and unseasonable weather. The higher price of the raw material and of labor has not restricted business in American hemp twine, which continues very active. Hides and leather show no improvement, and in some departments, such as belts, bags and pocketbooks, business is at a standstill. Real estate shows more life. Prices at a large sale of unimproved property in the Bronx were also good, small investors being much in evidence. Suburban operations have not been so active, but the lull is believed to be temporary only and due to the absence of seasonable weather. The wholesale paper trade has, to some extent, felt the depression in other lines, but, on the whole, business is good, except in the finer grades. Collections are rather slow.

The following telegrams show trade conditions at the cities mentioned for the week ending June 7:

BOSTON.—Trade in retail dry goods is still badly affected by unseasonable weather. Clearance sales of spring and summer garments and fabrics have this year been advertised earlier and more generally than in former years, and the reductions in prices are considerable. As a result of cancellations and lack of expected duplicate orders, manufacturers have sold stocks at a sacrifice. In men's clothing, spring trade has been rather more favorable than in furnishing goods, hats and the like. Orders received for fall wear exceed those of a year ago. Business in wholesale millinery is unsatisfactory, the showing in the last half of the season failing to meet earlier expectations, and considerable stocks are left on hand. Cotton goods are strong, advances still being announced. Prices have been and are on a very high level, and there is considerable uncertainty as to the possible limits, but mills appear to be in a very strong position, with goods sold ahead through the present year. Leather is quiet but shipments are heavy, which indicate that fall cutting is starting in early. Late orders for summer wear are disappointing, owing to unseasonable weather. Chemicals are fairly active. Grain and wood alcohol are in good request and firmly held. The feature in drugs is the demand for quinine in jobbing quantities. Opium continues dull; peppermint oil is firm. Retail trade in house-furnishing goods continues backward and has materially affected the jobbing trade. Collections are slow, and there has been a considerable falling off in business. In northern and eastern lumber, business is fair. Western and hardwood lumber prices are firm, and in southern lines orders are plentiful at good prices. In paints and oils a good business is reported. Coal continues very active, owing to continued cool weather. Wholesale liquor dealers report ordinary trade. The demand for whiskies and brandies is good, owing to unseasonable weather. Brewers are fairly busy, but demand is only moderate. Business in leaf tobacco is fair. Some complaint is heard from wholesale grocers on the score of slow payments, but otherwise trade is fairly satisfactory.

PROVIDENCE.—Manufacturers of cotton goods report firm business and a scarcity of goods. Cold weather hampers trade, and spring stocks are not moving readily. Collections are slow.

PORTLAND, ME.—The weather is still unfavorable for retail trade. Country stocks remain unbroken and wholesalers are complaining of dull business. Sawmills and other manufacturers generally are busy.

PHILADELPHIA.—Chemicals and dyestuffs are in fair demand at firm prices, but collections are slow. Paints and glass are moving in larger volume and there is a more cheerful tone to the market. Lumbermen report less activity than they were led to expect at this time of year, but a very fair business is being done in small lots by retailers. Hides and skins continue fairly strong on fair demand. Hides of improved quality are firmer. Goatskins continue dull and weak. For glazed kid demand is moderate, with prices slightly off. Dealers in leather report fair business, with prices slightly lower on some grades. Tobacco is in stronger demand through the west and in Canada, particularly Sumatra and Havana, than locally, though prices are from 25 to 50 per cent. higher than last year. Large local users are holding off for lower prices, which they look for, though dealers find no shading on desirable goods. Liquor withdrawals are above normal for this time of year—somewhat over production, in fact. Straight rye with wholesalers is dull, but blends are selling better. Demand for coal for domestic purposes has decreased, but steam orders are fair and prices steady.

PITTSBURGH.—Pig iron is quiet. There is practically no iron available for delivery prior to September 1, and the tonnage to be had for the balance of the year is comparatively small. Under these conditions furnacemen are not inclined to respond to the demands of buyers, who are holding off for lower prices. Demands for delivery on contracts already made show no abatement. Difficulty in having orders filled is as great as heretofore. The large output of coke and good transportation facilities cause continued weakness, and prices remain the same. Quotations at the valley furnaces for spot delivery of pig iron are nominally as follows: Standard Bessemer, $24; chilled basic, $24; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2, and foundry coke, $3 to $3.25.

BUFFALO.—Trade at retail is very dull, caused by the continued unfavorable weather, which, authorities state, has also affected building operations. Collections appear to be somewhat slower than usual.

BALTIMORE.—Cold, rainy weather causes dullness in retail trade, and stocks are larger than for some years. Jobbers report but little immediate business. Fall orders for shoes, dry goods, notions and clothing are being received in fair numbers, but unless warm weather sets in, cancellations are expected. Crop conditions in the tidewater section are unsatisfactory and very little fruit and vegetables are being sent to market. As a result, wholesalers are being asked by retailers for more time, which is being granted. A great many southern buyers have postponed ordering for fall, promising to come to market in July and August, via the Jamestown Exposition; therefore Baltimore merchants look for good business later on. Paper at wholesale is active at higher prices, but collections are slow. New business in crockery is normal, while collections are fair. Woodenware is dull, with collections slow. Brush manufacturers report new business of small volume, with collections fair and prices firm. Wholesale grocers note a slight improvement in sales, but collections are slow. Canned goods are active and prices are advancing. Tobacco receipts show a gradual increase, and in eastern Ohio they are liberal. The market opened with a good demand for all grades at fair prices. Sumatra and Havana are in good demand at high prices. Turpentine shows a decline. Lumber shows improvement, with a better demand for higher grades. Box factories are fairly busy. Collections are fair. Demand for money exceeds the supply, and renewals of paper are more prevalent than in 1906.

CINCINNATI.—Business has improved.

CHICAGO.—Business with jobbers and retailers shows moderate improvement, owing to more seasonable weather. Jobbing sales were mostly for immediate delivery, and interior buyers are awaiting the outcome of the crops before entering into further large commitments. The rise in cotton has strengthened values of goods and induced more buying. Pig iron is quiet. Northern furnaces are closely sold up, show no uneasiness and adhere to full prices. Fair sales of steel rails for next year's delivery have been booked, but buying is not so brisk as a year ago. Demand for structural material is fair. The construction of the $20,000,000 Western Indiana Railway depot has been deferred until there is a better market for placing securities. Business in coal is fair and prices are steady. Cars are more abundant, and eastern and western roads are nearly even in regard to the supply. Interior purchases of lumber have decreased, due to crop uncertainty, but local business is up to the average of recent years. Groceries are having an average sale. Eggs and old potatoes are lower, but new potatoes are higher. Butter is unchanged, with a lighter make than usual at this season. Cattle and sheep are at the highest prices in recent years. Hogs have advanced fairly. Cattle and hog receipts increased, but those of sheep decreased. Money is easy. Collections are fair to good.

PEORIA.—Cool weather hurts business, and jobbers and retailers report a decrease in sales from last year. Collections are slow.

INDIANAPOLIS. — Wholesale trade continues good. Retail trade is fair. Collections are slow.

TERRE HAUTE.—Retail sales are increasing slowly but steadily. Wholesale trade is more favorable. Banking institutions report no unusual amount of loans, though backward sales in some quarters have occasioned demand for funds.

LOUISVILLE.—Weather conditions continue bad and hurt all lines of trade. Many cancellations of fall orders are being received by manufacturers of clothing. Southern merchants are stocked up with spring goods, which makes collections very slow. Whiskey distillers and dealers are closing a very successful season. Business in groceries and drugs is very fair, but collections are slow.

ST. LOUIS. — The continued unseasonable weather which has affected retail trade during the past sixty days is causing some anxiety among wholesalers because they are not receiving the usual number of filling-in orders. Orders taken for future shipment are liberal. However, there have been a few cancellations. Shipments by jobbers in and manufacturers of shoes, dry goods, clothing and hats are in excess of last year. Manufacturers of and dealers in plumbers' material report an unusual demand, and almost every house shows a very large increase ever last year. Demand for hardware and builders' supplies is good. Country collections are very good, considering the condition of the weather and retail trade.

KANSAS CITY.—Wholesalers in dry goods, hats, caps, millinery, boots and shoes report orders for fall delivery in excess of a year ago. Sales for immediate shipment have fallen off, owing to unseasonable weather. Business with retailers continues backward. Reduction sales are in evidence in many lines. Collections range from fair to good.

MILWAUKEE.—Conditions in jobbing and retail lines are improving. Collections are better.

SIOUX CITY.—Trade has improved in all lines.

DAVENPORT.—Retail trade continues quiet and does not equal that of corresponding time last year. Manufacturers are busy, but mostly with orders taken last year. Jobbers report few filling-in orders. Collections are slow, and in some lines extensions are asked.

ST. PAUL.—Business has been affected somewhat by the continued cool weather, but has been good for the season in all lines, although not up to expectations. Collections have not kept pace with the increased outstanding volume of business, although quite a little money has come in within the week.

MINNEAPOLIS —While no special activity is noticeable in any line, jobbers and manufacturers report a satisfactory volume of business, with good prospects for the future. Building operations are being actively prosecuted and materials are in brisk demand. Flour production is curtailed and sales are quiet.

OMAHA.—Retail trade continues quiet on account of unseasonable weather. Jobbers also report light reordering. However, a good business is reported for fall delivery. Collections continue backward.

LINCOLN.—Business shows no appreciable improvement over last week. Collections are fair.

CHARLESTON.—Wholesale dealers in groceries, dry goods and boots and shoes report a fair volume of business and predict a good fall trade. Collections are slow.

RICHMOND. — Continued unseasonably cool weather depresses trade. Dry-goods and notion dealers continue taking orders for fall shipment, but filling-in orders are light. Wholesale grocers are active, but in some instances high prices have made ordering light. Tobacco planting is late, plants are scarce, and with continued unseasonable weather the crop will not be an average one. Retail trade shows some improvement. Collections are slow.

AUGUSTA. — Trade is quiet. Collections are fair.

ATLANTA.—Warmer weather has given wholesale trade more life, and orders are coming in more satisfactorily. Department stores report a gain in business despite standing weather conditions. Collections are still dragging.

MACON.—Trade is slow.

JACKSONVILLE.—Trade is satisfactory. Collections are fair.

BIRMINGHAM.—The strike of the local railway employees has been called off and all union men of the district have returned to work. Business is rapidly resuming its normal condition. Inquiries for pig iron are brisk, and some sales for the first part of 1908 have been made at present prices.

CHATTANOOGA. — Trade conditions are satisfactory. Collections are about the average.

MEMPHIS.—Seasonable weather stimulates retail trade. Wholesale business is fair. Collections are slow.

NASHVILLE. — More seasonable weather has improved trade, particularly with retailers. Collections, however, continue only fair.

MOBILE.—Good weather prevails, which encourages the farmer and jobber. Retail trade is good, summer wearing apparel being in demand. Jobbers report sales for fall delivery improving. Collections are fair.

MONTGOMERY. — Unfavorable weather has affected all lines of trade. Collections are very slow.

LITTLE ROCK.—A few days of sunshine and warm weather have benefited all lines of trade, and the outlook is more encouraging than for several weeks past. City trade is fair and collections are good.

NEW ORLEANS.—General trade is improving, now that summer appears to have set in. Jobbers report collections fair, and future orders are gradually working up to expectations.

FORT WORTH.—Trade is quiet and collections are fair.

DALLAS.—Trade is practically at a standstill. Collections are very quiet.

WACO.—Jobbers report satisfactory business. Collections are fair.

SAN FRANCISCO.—Business continues dull and the industrial situation has not improved. Abnormal living expenses remain unchanged, with high prices still maintained for building material and wages.

SEATTLE.—Money is still tight, and real estate shows no recovery from recent inactivity. Owing to the car shortage, many of the shingle mills have already closed down, and this move threatens to be general. Collections are fair and prices firm.

SPOKANE.—Building operations continue active. Real estate is in good demand. All lines of trade are brisk, with collections fair.

TACOMA.—The first five months of this year have established new records for sales in most lines, despite serious transportation handicaps. Flour is up 25 cents a barrel.

PORTLAND, ORE.—Trade conditions continue satisfactory to both jobber and retailer, and manufacturers are behind on orders. Building continues active. Collections are good.

TORONTO.—The backward spring is having a marked effect upon dry goods. Retail trade has been suffering all along, but wholesalers have not had so much reason to complain, as they have been busy sending out delayed shipments of goods. The continued bad weather, however, may cause considerable loss. It is reasonable to expect sorting trade will be light, unless hot weather lasts unusually late in the year. There is no sign of apprehension regarding next fall and winter's business. On the contrary, ordering on that account has been heavy. Some dry-goods houses report fall business already booked as fully double that of last year. This confirms the report that retail stocks of winter goods are light. Values of textiles hold firm. The grocery trade is active, and in this line and hardware heavy shipments are going forward. The activity in industry continues unabated and orders for almost all lines of goods are heavy. Reports from the country say there is a fair movement at retail. Collections are fair to good. Of the crops, it is said that while the plant growth has been delayed, the roots of the grain have made good headway, and the upper growth will be all the more rapid when hot weather does come. Butter is plentiful, hides and skins are quiet and wool is steady.

MONTREAL.—There has been some improvement in trade. In dry goods, however, the cold, wet spring has done considerable harm. The millinery trade has been particularly affected, and nothing but the speedy arrival of hot weather will save many retailers from losses on lines of light goods. The hardware and grocery trades have not been affected to any great extent. The activity in building keeps hardware brisk. As an aftermath of the 'longshoremen's and carters' strikes here work at the port is being rushed night and day. The men returned to work accepting half the demanded increase. The short delay, however, caused great freight congestion. Outward freight is reported somewhat light. The late spring has been responsible for ice blockades at most of the eastern Canadian ports, and shipments of iron and coal have been affected thereby. Collections are generally fair. Butter prices hold up, with supplies light. The quality of cheese coming forward is good, but the volume is light. The demand for export is good and prices are firm.

VANCOUVER-VICTORIA.—There is a good tone to trade all along the coast. Wholesale lines are moving well and provincial industries are active in all directions. The shipping trade is particularly brisk. The demand for wheat and flour for the Orient is steadily growing. All through the winter shippers were unable to obtain sufficiently large stocks to fill this demand. The Canadian trade with Japan is showing particularly good signs of growth. Collections here and throughout the province are generally good.

WINNIPEG.—Confidence in the future of trade grows steadily. Wheat seeding is practically finished, and welcome rains have followed. The total crop area is smaller than last year, the decrease being estimated in different localities at from 10 to 20 per cent. Warmer weather has given a brighter tone to wholesale and retail trade, but the early delay in general trade means that much has to be made up for. The outlook for fall trade is good. Prices of all commodities hold very firm. Collections show little change and are still slow.

Money Market.

This week's extensive gold shipments, amounting to $7,100,000, and to a total of $10,400,000 since the present outflow to Paris began, had little effect on rates for call money at New York or on time loans for short periods. The quotation at which renewals of call borrowings were made on the Stock Exchange was generally 2 per cent., and thirty to sixty-day loans remained unchanged at 4½ to 4 per cent,, there being, however, little or no demand for such maturities. In connection with loans for longer periods the feeling was, however, firmer, 5@4¾ being the quotations for four to six months' arrangements, and loans maturing in 1908 were held at 6@5½ per cent., an advance of ½ to ¾ per cent. At the same time there was little actual business done at the advanced figures, Wall street's requirements being at present very light, and the borrowing there is mainly done in the call-loan market. Commercial paper has been dull. The offerings are fairly good, but the buying is of a restricted character. Owing to the gold exports, the New York banks apparently lost $5,000,000 on the aggregate movement of money for the week, and an adverse bank statement is, therefore, looked for to-day.

New York Banks.

Only one striking feature was displayed in last Saturday's New York Clearing House averages, this being in the form of an increase of $13,541,000 in the item of loans. This somewhat unexpected result was attributed to operations by syndicates. It was also noted that in the face of the exportation of $3,300,000 in gold during the week covered by the figures, the cash holdings increased $982,000, although this result was probably due to the system of averages. Deposits increased $15,554,000, or about $1,000,000 more than was called for by the other items, and the reserve required was accordingly $3,888,000 greater than the week before, resulting in a decrease of $2,906,000 in the surplus reserve. The figures of the statement compare as follows with those of the preceding week:

	June 1	May 25	Changes
Loans	$1,139,931,100	$1,126,389,500	I. $13,541,600
Specie	221,928,000	221,189,600	I. 738,400
Legal tenders	72,903,100	72,659,400	I. 243,700
Deposits	*1,128,194,600	1,112,640,500	I. 15,554,100
Circulation	50,628,900	50,659,600	D. 30,700
Total reserve	294,831,100	293,849,000	I. 982,100
Reserve required	282,048,650	278,160,125	I. 3,888,525
Surplus reserve	12,782,450	15,688,875	D. 2,906,425

The following table shows the bank holdings on the respective dates:

	June 1, 1907	June 2, 1906	June 3, 1905
Loans	$1,139,931,100	$1,051,543,200	$1,101,283,100

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending June 6 shows an aggregate of $3,039,828,000, as against $2,156,068,000 last week and $2,947,365,000 in the corresponding week last year. Canadian clearings for the week aggregate $89,199,000, as against $72,803,000 last week and $83,072,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	June 6	Inc.	Dec.	May 30

Foreign Exchange.

The continuance of gold exports on a decidedly large scale should, under ordinary circumstances, tend to depress the exchange market. This week, however, although $7,100,000 specie was taken for shipment to Paris, sterling rates advanced, and on Thursday bankers' sight bills sold up to 4.87, the market apparently absorbing the large amount of exchange which came out in connection with the arrangements for the heavy gold shipments for to-day, amounting to $3,600,000, which were announced on Friday. This made the total shipments since the present movement began $10,400,000. Commercial bills were in poor supply and the inquiry seemed to come mainly from bankers. The impression continues to be that further gold shipments to Paris may be expected next week. On Friday the market was very firm, demand sterling selling up to 4.87.10.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.50@4.87.60; commercial bills, 4.83¼@4.84; francs, 5.19⅜@5.16¼ plus 1-64; reichsmarks, 94⅜@95¼ less 1-32.

The Bank of England's discount rate was unchanged this week at 4 per cent. Its weekly return on Thursday exhibited a decrease of £462,000 in gold, and the proportion of its reserve to liability was 46.90 per cent., against 46.82 per cent. last week. There was also a reduction of £647,000 in loans. In the London open market call money is firm at 3¾@3¾ per cent., while discount is 3⅝@3 9-16 per cent. The discount rate of the Bank of France remains at 3½ per cent. Its report for the week showed an increase of 38,575,000 francs in gold, while its loans were reduced 156,325,000 francs and its note circulation 5,875,000 francs. In the Paris market discount is slightly easier at 3¼ per cent. The Berlin bank rate remains at 5½ per cent., the market quotation for discount there being 4⅝ per cent.

New York Securities Market.

For the third successive week the stock market has been at first subjected to bearish pressure, resulting in declines throughout the list, later on exhibiting a display of renewed, although moderate, strength, principally on short covering. Among the earlier unfavorable influences was the continuance of gold shipments from New York to Paris, which amounted to $7,100,000 for the week, or a total of $10,400,000 since the present outflow began. Apart, however, from the appearance of a firmer tone in time loans for extended periods, that is, for six months or more, the gold exodus had little effect on the money market. In fact, the principal element in connection with the foreign situation which influenced Wall street was a heavy liquidation of securities at both London and Paris, accompanied by reports of impending financial troubles at the first named center, and by intimations that the French money and stock markets were for some reason nervous and apprehensive as to the payments on the Russian national debt which mature on the 15th instant. In fact, it is generally believed that it is against some contingency of this kind that the Bank of France is making such determined efforts to strengthen its gold reserve. Domestic matters also furnished their quota of reports which encouraged bear selling during the early days of the week, the principal one coming from Washington, and being to the effect that the administration and the Interstate Commerce Commission had determined to press Mr. Harriman vigorously regarding the questions which he had refused to answer when before the commission, or even to institute a prosecution of that gentleman and his associates. As the week progressed, however, it became apparent that, although London was still depressed, there was no announcement of serious trouble in that quarter. It was also recognized that the talk from Washington of prosecutions of railroad officials was exaggerated, the probability being that no serious steps of that kind are actually contemplated. The crop news from the west also became much more encouraging, which had its effect on the bears. Moreover, there were a number of rather favorable happenings, embracing the placing of American Car & Foundry common stock upon a 4 per cent. instead of a 2 per cent. dividend basis, while American Smelting common was also raised from a 7 to an 8 per cent. basis, with a good effect upon both stocks. The news from Albany that the 5-cent Coney Island fare bill had probably been killed also had a good influence upon Brooklyn Rapid Transit, while the fact that the Interborough directors declared the regular 2½ per cent. quarterly dividend on its stock, about which action there had been some uncertainty, was productive of a good tone in the traction properties.

Trading continued to be mainly centered in a few leading railroad stocks, Union Pacific, as usual, being conspicuous, and after selling off on the reports referred to above, it showed a substantial recovery. It may be noted that New York Central on last Monday sold at 108¼, the lowest price which the stock has touched since 1898. Some effect was produced on Pennsylvania shares by the news that its management had decided to place all fares on a 2-cent basis by way of reply to the recent legislation in the state of Pennsylvania on that subject. The Amalgamated Copper Company's report, while showing reasonably good results, did not come up, however, to the prevalent exaggerated notions about the amount which is being earned on its stock, but had little effect on the stock itself. The announcement of a $21,000,000 issue of new stock at par by the American Bell Telephone Company was of little interest to the New York market, but, on the whole, seemed to be better received than recent announcements of new capital creations. The market on Friday was strong and generally higher in the face of further large gold export engagements.

Boston Stock Market.

June 6	1,135,065	573,139	1,108,146
Largest exports in 1906, week ending February 1			8,289,359
Smallest exports in 1906, week ending June 14			320,486
Largest ever recorded, week ending Feb. 1, 1906			8,289,359
Smallest ever recorded, week ending Sept. 1, 1902			21,196

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week ending June 1 and for the forty-eight weeks of the present season compares with similar periods one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
June 1, 1907	366,131	2,729,154	4,432,816	2,537,797
June 2, 1906	421,747	1,801,825	5,508,354	3,548,191
June 3, 1905	251,672	2,265,297	4,788,575	3,259,100
Season				
July 1, 1906, to June 1, 1907	19,317,959	236,842,444	189,659,640	190,061,413
July 1, 1905, to June 2, 1906	18,666,928	223,830,986	174,763,397	203,403,590
July 1, 1904, to June 3, 1905	15,778,948	200,633,761	169,705,822	149,998,360

Cereal Exports, with Destinations.

The exports of wheat and corn (in bushels) and of flour (in barrels) from the United States and Canada (coastwise shipments included), with ports of destination, for the week ending May 30, 1907, follow:

To	*Wheat*	*Corn*	*Flour*
Liverpool	170,111	70,712	13,802
London	378,568	141,857	62,004
Bristol	....	....	....
Glasgow	155,304	137,800	13,358
Leith	72,280	....	....
Hull	48,000	....	4,000
Newcastle	....	....	....
Manchester	127,158	25,714	1,281
Belfast	15,720	....	575
Dublin	....	....	....
Other United Kingdom	15,990	....	6,000
United Kingdom, orders	96,760	....	....
Antwerp	135,000	43,714	....
Holland	88,000	89,500	14,550
France	....	....	....
Germany	152,200	165,413	15,263
Portugal, Italy, Spain and Austria-Hungary	177,000	....	....
Scandinavia	....	....	....
Asia	....	....	....
Africa	....	....	....
West Indies	....	56,525	39,392
All other	....	75,333	6,833
Total	1,632,091	806,568	177,058

Exports of oats amounted to 222,397 bushels, and of rye, 90,398 bushels.

Cereal Exports by Ports from the United States and Canada.

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*May 31, 1907*	*May 24, 1907*	*June 1, 1906*
American	2,812,095	2,952,233	2,250,321
Other kinds	1,369,000	1,442,000	1,498,000
Total	4,181,095	4,394,233	3,748,321

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	May 31, 1907	*May 24, 1907*	*June 1, 1906*
Great Britain and continent	2,509,000	2,662,000	1,831,000
Egypt	119,000	124,000	95,000
India	787,000	805,000	1,014,000
United States	766,000	803,000	808,000
Total	4,181,000	4,394,000	3,748,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last year*
Week	43,455	75,789
Season	13,025,592	10,536,567

Wool Markets.

The stock of quarter blood fleece wool remaining after the heavy sale recorded last week has changed hands during the past week, the lot, of about 250,000 pounds, being sold at substantially the same price, 30 cents, that the larger amount brought, thus cleaning up about all the old domestic wool in this market, with the exception of scoured territory and scattering lots of other grades. On account of the scarcity of long staple wool in the new clip good staple old wool is in very good demand, and scoured territory sold during the past week at 65@68 cents, one lot of 120,000 pounds bringing the top price. Foreign fine merinos are also in very good request, combings 64s to 70s selling at 43@44 cents, with sales of from 2,000 to 3,000 bales. Other sales have been new Arizona at 23@24 cents for fine and fine medium, and spring Texas at 23@24 cents for eight months. The popular demand for softer finished goods appears to be one of the principal reasons for this active demand for long staple wools from the manufacturers. There has been much more activity in the west during the past week, and dealers have bought heavily in competition with manufacturers' agents. A Boston house has contracted for about 3,000,000 pounds, including the well-known Long clip, in Montana, at 21@22 cents, with some clips at 22½ cents. The higher priced wools in this lot will cost, laid down in Boston, 68 cents scoured, which seems high to many dealers. In Idaho sales have been made at 19@20 cents, with a few choice clips at 21 cents. The Heppner sales in Oregon included 600,000 to 700,000 pounds at 19½@20 cents, and in Wyoming prices have ranged at 19@20 cents. In Utah, Nevada and California the new wools are practically out of the hands of the growers. Advices from London state that the market there has lost none of its strength since the close of the sales, and that at the opening of the next series, July 9, the offering will probably not be over 160,000 bales, though the sales are not limited in amount.

Boston Shoe and Leather Market.

Trade in leather continues quiet, yet the books show that the amount of leather going forward is, in the case of many firms, largely in excess of the same period a year ago. Heavy leathers are more active. Shoe manufacturers have about concluded their spring inventories, and cutting on fall goods has begun. Late orders on summer goods have been very disappointing. The fact that some dealers have on hand goods that were bought before present prices were established is still given as a cause, but for the most part the weather is held responsible. The *Shoe and Leather Reporter's* statistics this week are as follows: Last week, 85,785 cases; preceding week, 90,026; last year, 88,327; total for 1907, 2,092,759; total for 1906, 2,166,544; decrease, 73,785.

MANUFACTURERS AND THE PANAMA CANAL.

Henry H. Lewis, writing in *Harper's Weekly*, says: "There is hardly one manufacturer who is not directly or indirectly interested in the production or handling of some product required on the Isthmus of Panama; and this interest extends to a greater or lesser degree to every wage earner in the United States. It is not claiming too much to say that the whole country will be benefited, not only through the sale of products used in building the great waterway, but also through the increased trade connections with the enterprising and rapidly growing countries on the west coast of South and Central America.

"The cost of the canal has been variously estimated at the amount appropriated by Congress, $180,000,000 (including $40,000,000 paid to the new Panama Canal Company of France, and $10,000,000 paid to the Republic of Panama), and at the sum generally conceded by engineers, at least $250,000,000. Of this enormous amount at least one-half, or $125,000,000, will be expended for manufactured products purchased in the United States. This, it should be understood, is the direct purchase. It does not represent the actual total amount. An enormous sum is being paid for labor. For instance, the number of employees now at work exceeds 20,000, representing an average daily pay roll of at least $60,000, or $1,500,000 each month of the year.

"An industrial army of 20,000 workers is a force of consumers worth considering. This army is like a small city and requires all that a city—a modern American community—would require. Food products, clothing, books, articles for amusement, the thousand and one things demanded by people with money to spend, are bought and consumed, and the sum total of these expenditures must be added to the amount bought directly by the Panama Canal Commission for use in constructing the waterway.

"Thirty-two million dollars have been spent in preliminary work by the commission. Of this amount about $4,500,000 have been expended in government and sanitation; about $7,000,000 in construction of quarters and other buildings, docks, wharves, railway enlargement, waterworks and sewers in the zone, and in engineering work; about $12,000,000 in permanent plant; over $4,500,000 in miscellaneous material and supplies, and more than $1,500,000 in the construction of sewers and waterworks, and for street paving and improvements in Panama and Colon. It will be seen from the above that practically a new state has been created, including the building of towns and the preparation and assembling of the most gigantic constructing plant known to the world.

"Now comes the maintenance of this new state and the stupendous work connected with the actual construction of the canal. The wide scope of the task cannot be seen at a glance. The digging of the Culebra cut alone, which literally means the slicing in two of a great hill, will require vast quantities of railway material, explosives, tools, dredging apparatus, giant steam shovels and the other articles necessary to a task of this nature. Then will come the building of the great masonry dams, with a demand for millions of barrels of cement and for innumerable quantity of other manufactured products. And, to put it briefly, will follow the work of assembling the entire line of the waterway in preparation for its ultimate duty of facilitating the passage of merchant fleets from ocean to ocean.

"Therefore, no manufacturer can say that the market is covered simply because the canal has been building for several years. Nor can individual manufacturers say that the opportunity to secure a share of this fine market is limited to a favored few. All that is necessary in selling goods to the canal is to produce the right quality and kind of material, to sell it at the right price, and to know how to bid."

THE INDUSTRIAL TOWN OF PULLMAN.

The *Railway Age* relates that "about twenty-six years ago, in April, 1881, the manufacturing town of Pullman, a few miles south of the city limits of Chicago, came into being and operation. Here George M. Pullman had realized the long cherished vision of a model city in which the great manufacturing plant of the Pullman Company and those of related industries should be the center and life of a community of contented employees, well paid, well housed, well fed, enjoying the advantages of paved streets, perfect sewerage, water supply, convenient shops and markets, a savings bank, schools, churches, amusement centers and other comforts and luxuries seldom associated, in that day at least, with great manufactories. The model settlement was located on a tract of several hundred acres within the village of Hyde Park, now a part of Chicago, and was subject to the village government and taxation; but the Pullman Company made the street improvements, furnished water (purchasing it at wholesale prices from the Hyde Park waterworks), collected water rates from its people, conducted its policing, street lighting, parks, schools, churches, etc., according to its own regulations, in harmony with, but to a large extent independent of, the surrounding government, and without expense to it. Undivided ownership and control by the Pullman Company of all the lands, buildings and public utilities within a defined area surrounding the manufacturing plants was the basic principle. But in October, 1898, the Illinois Supreme Court rendered a decision holding that Pullman's Palace Car Company under its charter had no right to own and operate the town of Pullman and directing it to cease exercising any functions of municipal government, and within five years to dispose of all lands and buildings not required in its manufacturing business. At that time the products of the car works were valued at more than $10,000,000 a year; over 5,000 names were on the company's pay roll at Pullman and the population of the community was some 10,000. Among the acts which it was held that the company was not authorized by its charter to perform were those of dealing in real estate, selling gas, water and light, making bricks, etc. In compliance with the ruling the Pullman Company disposed of the public utilities and has for some years been disposing of its outside lands and interests, and has lately issued a circular to employees offering for sale the houses and lots in Pullman owned by the company. Thus the end of the model city of Pullman as the property of a corporation is at hand. It remains to be seen whether the interests of the employees and of the community which this great company has for a quarter of a century been developing on the marsh lands of Hyde Park will be served by dissolving the paternal government under which it came into being and has flourished."

NEW GERMAN TARIFF AGREEMENT.

The following is a list of about forty classes of articles upon which Germany makes substantial reductions under the new tariff arrangement with the United States (in marks per 100 kilos):

Articles	Rates of new gen. tariff	Rates under new ag'm't
Rye	7	5
Wheat and spelt	7.50	5.50
Malting barley	7	4
Other barley	7	1 30
Oats	7	5
Maize and sorghum	5	3
Beans for food	4	2
Linseed and hempseed	0.75	Free
Flour of grain, except oats	18.75	10.20
Walnuts and hazelnuts	4	2
Fresh apples, pears and quinces in single covering	10	3.20
In more than one covering	10	5
Fresh peaches	8	2
Dried apples, pears, apricots and peaches	10	4
Fresh oranges	12	3
Sheep	18	8
Hogs	18	9
Fresh, chilled or frozen meat	45	35
Simply prepared meat	60	35
Meat prepared for the table	120	75
Lard	12.50	10
Wine in casks, of alcoholic strength not exceeding 14 per cent. by weight	24	20
Preserved tomatoes and olives	75	30
Miscellaneous articles of food in hermetically sealed receptacles	75	60
Lubricating oils	10	6
Heavy benzoin	60	2
Glue and gelatine	5	3
Boots and shoes, weighing more than 1,200 grams per pair	85	60
600 to 1,200 grams per pair	120	80
600 grams or less per pair	180	90
Wall paper	24	12
Grindstones and whetstones	24	12
Phonographs	60	40
Small arms	90	60
Gold watches	30	0.80
Silver watches	1.50	0.60
Watches of common metals	1	0.40
Gold watch cases	1.50	0.40
Silver watch cases	0.75	0.40
Organs	25	20
Musical boxes, without case	25	20
Others	40	20

Among other important articles of American export for which this agreement secures the conventional rates that represent reductions below the new general tariff of Germany from 25 to 50 per cent., and even more, are the following: Timber for building and industrial purposes, wooden paving blocks and wood for casks; leather, half or entirely dressed, saddlers' and trunkmakers' wares, miscellaneous leather goods and harness; India rubber, tubes, wares and rubber-coated textiles; many kinds of paper goods; hollow glass, plate and sheet glass; water-pressure engines, steam engines and miscellaneous machines; freight cars, motor cars and motor cycles, and carriages.

A STEEL CANAL ACROSS THE SAHARA.

According to *Ideal Power*, "two important contracts have recently been carried out for a comprehensive irrigating scheme in upper Egypt, by which 125,000 acres will be eventually irrigated and put under cultivation. The plan is one of the largest irrigation schemes ever promoted in that country. A portion of the Nile water supply stored up by the Assuan Barrage is now being utilized. The irrigation estate is bounded on the west by the Nile and on the east by the great desert. The soil is dry and parched and is supposed to have received no water for the last 3,000 or 4,000 years. The east bank of the Nile at Kom-Ombo is too high to allow of the land being irrigated at flood time in the usual manner, and in order to obtain a sufficient supply of water for the continual irrigation of the entire tract, it was necessary to install pumps. These pumps discharged the water into riveted steel rising mains, which in turn delivered into a service reservoir. This reservoir is connected with the great steel canal, which delivers the water into distributing earth canals or culverts, from which it flows onto the land.

"The canal is constructed of riveted steel and is nearly semi-circular in form, measuring nineteen feet eight and one-fourth inches in diameter, total length 517 feet. It is built of seven plates around the circumference, the plates being connected by half-inch snapped-head rivets, of which a total of 650,000 was used. To allow for expansion and contraction the canal was subdivided into seventeen sections. These were connected together by masonry basins and packed expansion joints. At the end of each section of canal as it entered the masonry basin a stiffening band was riveted on, the external rivet heads being countersunk flush. This band is made to slide in and out of the basin on short sections of rail let into the masonry. The joint is kept tight by means of tarred or tallowed rope packing inclosed between two light semi-circular angles placed back to back with bolts passing through them. The weight of the water flowing through keeps the canal floating on the packing, and each section can therefore expand or contract, according to temperature.

"Among the many difficulties encountered in the work were the unequal expansion of the steel plates, due to the sun's rays affecting the side of the canal nearest to it more than the other side, and the wind and sand action, which frequently caused a whole section of the canal to sink several inches. The total weight of the steel work was 1,250 tons.

"Seven hundred men, including eight Englishmen, the remainder being chiefly Arabs, with a few Greeks and Italians, were employed. The work was completed in five months, working day and night. The loose, shifting sand foundation caused much trouble and tools were constantly being lost and buried. The natives did not like night work and it was difficult to make the Arab 'holders-up' work at night underneath the canal on account of the scorpions in the sand. The Arabs were also fond of drinking the machine oil and anointing their bodies with it. One of the chief troubles was the natural inclination of the different tribes to engage in petty warfare."

DEVELOPMENTS IN AFRICA.

"About fifteen months ago a few head of the fine-wooled sheep of Australia were introduced on the high plateau of the British East Africa protectorate," say the New York *Sun*. "This is probably the first attempt to grow merino sheep almost directly on the equator. It is said by the British survey in that region that the experiment bids fair to be successful. This simply means that the elevation of about 8,000 feet at which the sheep are living gives the proper climatic conditions not otherwise obtainable in that latitude.

"It is an old saying that the unexpected always happens in Africa. The remark formerly applied to the unpleasant things that were constantly occurring. It is still used, but it relates now to the realization of hopes and plans that till recently seemed visionary and impracticable.

"Africa is the theater now of the greatest work of reclamation the world ever saw. It is too near us and too vast to be seen as yet in proper perspective. Few understand that the attitude of the world toward Africa has completely changed in the last five years. There are three reasons why the money and strength of the civilized world are now being poured out in greater volume than ever before. They will bring about a transformation covering the continent.

"One is that the great advance in tropical hygiene and the studies of scientific men on the ground have proved that there are large and widely distributed areas of the richest soil and the finest of grazing lands that are well adapted for occupancy by white farmers. The next year or two will see the invitation given to the European peasantry who can command a very little capital to settle in various parts of Africa, and conditions will be made practicable for them during the first years of pioneer struggle. It is found, too, that the opportunities for developing large plantation enterprises are illimitable, and that no other continent can afford better conditions in this line as soon as adequate transportation is provided. In many regions as large as some of the European states the best of soil is found to a depth of several feet.

"It is also found that the natives can be induced to do their full share in this work of transformation. Hundreds of thousands of them are now in the service of the whites. They are doing the rough work of building the roads and railways, stringing the telegraphs, manning the steamboats, burning the lime, making the brick, putting up the houses, and constructing the furniture from hard woods which they make into lumber. Hundreds of trade schools, maintained by governments and missionary societies, are scattered from the Atlantic to the Indian ocean and are turning out effective skilled labor. Hundreds of native women, whose fathers were cannibals, are busy with sewing machines, turning out garments for the army of laborers. The white man thinks and plans; the native, under his guidance, turns his ideas into concrete form.

"The third fact that is pushing all these enterprises forward with tremendous energy is the mineral wealth, of which new fields are being constantly discovered. There are vast coal fields not yet reached by transportation; the gold of German East Africa, the gold and vast copper resources of the Congo State are still untouched; the iron, as widely distributed as in any of the continents, is still smelted and wrought only by the native smith.

"Africa has been regarded as the poor sister among the continents. The more it is studied in detail the more magnificent its resources appear. Native labor is abundant and it can be trained and disciplined. The nineteenth century revealed Africa; the twentieth will open its splendid resources for the good of its inhabitants and the whole world.

"These are the reasons why the railway from Freetown is now in operation 250 miles inland, the Germans are extending their track a half mile a day from Dares-Salam, the Congo State has some 2,000 miles of new track in construction, the Cape to Cairo line is operating for 2,000 miles north of Cape Town and will reach the Congo State this year."

Think!

Think of the number of typewriters that seemed popular a few years ago.

Think of the different ones seeking public favor to-day.

Then think of the Remington, which has been the standard since typewriters were invented, and which maintains its supremacy solely through enduring merit.

The man who *seeks* experience may seek it anywhere, but the man who *heeds* experience buys the

Remington

Have you tried the new Remington escapement? It will be a revelation to you of the latest and best in typewriter achievement.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 15, 1907.

Governor Hughes's veto of the 2-cent fare law in New York was utilized as an argument in the Wisconsin Senate, where a bill requiring railroad companies to accept a flat 2-cent passenger fare was defeated on Thursday by a considerable majority. This is a state in which, as recorded in these columns, the Railroad Commission in February reduced the maximum passenger rate from 3 to 2½ cents per mile. It will not escape attention that in a number of states in the west the railroads are considering the advisability of attacking the 2-cent fare laws in the courts. Proceedings with that object in view have already been begun in Minnesota. In Iowa, Nebraska and Arkansas tentative plans looking to the same end have been adopted. In Illinois the matter is being closely considered by the railroad attorneys. In Missouri a temporary injunction against the enforcement of the 2-cent fare law and the maximum freight rate law has been granted by Judge McPherson of the Federal Court at Kansas City, while counter proceedings have been begun by Attorney-General Hadley in the state courts.

Somewhat to the surprise of the money market, the only gold exports from New York recorded during the present week consisted of some $2,000,000, engaged on Friday. Moreover, the rate of exchange on London at Paris advanced, and while the price of gold bars in the former market was reduced a little, the Bank of France or its representatives did not bid for the new specie which came in at London this week. Under these circumstances, even taking into account the alleged willingness of the Bank of France to pay interest upon gold consignments while in transit, there is little inducement to withdraw it either from London or New York, the rates of exchange here being just a little below the level at which such operations would be accompanied by much profit. It is not thoroughly understood as yet whether the Bank of France has now succeeded in replenishing its gold supplies to such a degree that it no longer feels under the necessity of making further special efforts to that end. The inference from the facts cited above, however, is that the foreign financial outlook has to a certain extend improved, which is, of course, a matter of importance to the American money market, in view of the call which has just been issued by the Secretary of the Treasury for the return, prior to July 10, of $30,000,000 of the United States deposits in the national banks.

Secretary of the Treasury Cortelyou on last Wednesday made formal announcement as to the nature of his long-expected plans for the retirement of the remaining 4 per cent. government bonds due July 1. The circular issued in this connection states that the amount of these bonds which have not been refunded or retired will on that date be approximately $36,000,000, and will be paid off on presentation. To provide for this the Secretary has called upon certain depositary banks throughout the country to return to the Treasury on or before July 10 $30,000,000 of their government deposits. This amount represents the special deposits of $30,000,000 which were made in September last year as a measure on the part of Mr. Shaw to relieve the strain which existed in the money market. In making the announcement Mr. Cortelyou states that as a considerable portion of the maturing 4 per cents will have been presented for redemption by July 10, the surrender of these deposits at that date can be effected without causing any financial disturbance. This is the view which is generally taken by banking authorities.

Some very unusual developments have marked the recent course of the wine growers' agitation in the south of France. A most remarkable gathering was held at Montpellier on Sunday, which was the day fixed by a previous meeting for a "civil strike" in case the government failed to give full satisfaction to the growers. It was found necessary to run 400 special trains, to transform the railroad station and to lay special sets of extra rails to accommodate the traffic. The number participating in Sunday's demonstration was estimated by some at 600,000, and the gathering was marked by but a single instance of disorder. At a meeting held after the parade, Marcélin Albert, the leader, declared that the time had come for the "civil strike," and it was announced that that movement would be opened by the mayor of Narbonne. That official resigned on Monday in company with the municipal council. The example set at Narbonne was followed in a number of other cities and towns. This concerted action has had results of no little consequence, for throughout considerable areas the execution of the legal formalities connected with matters of marriage and succession has been suspended. Premier Clemenceau has addressed a letter to the mayors warning them that they are initiating a régime of municipal anarchy for which they will be held to a strict accountability. One outcome of the events of the week has been the passage, after a four days' debate, of the first clause of the government bill intended for the relief of the wine growers. Some who have looked closely into the matter believe that the real source of the depression from which the wine growers suffer is overproduction, and acting on this view the government, while declaring its determination to suppress wine frauds, offers to remit land taxes for five years to all who will abandon grape growing in favor of other crops.

Some years ago, when, following short crops here and good ones abroad, our exports of wheat fell off, there was a disposition manifested by some observers to regard the United States as having lost its position as a source of supply of wheat for Europe, and with a rather scanty basis for this reasoning, the opinion was widely expressed that our increased home consumption was so great that we would be unable to contribute any large quantity of wheat from our own relatively narrowing store. After the large crop of 1901—748,000,000 bushels—our production fell to 670,000,000 bushels in 1902, 638,000,000 bushels in 1903 and 552,000,000 bushels in 1904. Coincidently, the official returns of exports of wheat from this country fell from 155,000,000 bushels in 1902 to 114,000,000 bushels in 1903, 44,000,000 bushels in 1904 and only 4,000,000 bushels in 1905, while our flour exports fell from 20,000,000 barrels in 1903 to less than 9,000,000 barrels in 1905. With the gathering of larger crops in the year following 1904, however, our export trade in wheat again expanded. A crop of 693,000,000 bushels in 1905 was reflected in exports of 35,000,000 bushels of wheat and 14,000,000 barrels of flour, and the 735,000,000-bushel crop of 1906 is likely, according to the estimates of the Bureau of Statistics of the Department of Commerce, to result in a total export of wheat and wheat-flour (reckoned as wheat) equivalent to 140,000,000 bushels, as against a corresponding total of 98,000,000 bushels in the preceding year and 44,000,000 bushels in 1905.

The United States, therefore, has regained some of its lost trade, though the total export from the large crop of last year is likely to be 95,000,000 bushels short of the exports in the bumper year 1901, when the crop was only 13,000,000 bushels larger than that of 1906. Of course, in considering the relatively smaller shipments of the present year, it should not be forgotten that foreign necessities, no less than the size of our own crop, have a bearing upon our exports, and last year's world's crop of wheat was far above that of any previous year, while our relatively high-priced wheat met the competition of large South American, Canadian and other yields. Several conclusions may be reached after an examination of the statistics compiled by the Bureau of Statistics. One is that the coming years are likely to witness a smaller proportion of our crop exported than in earlier years, when our population was smaller and this country offered the cheapest wheat supply in the then wheat-producing world. In 1898 we exported nearly 41 per cent. of our production; in 1901 we exported 41.36 per cent.; in 1905 we shipped less than 8 per cent., while in the current year we will ship 19 per cent. Another point is that as the meat supply of this country grows dearer, as it seems bound to do, the per capita consumption of wheat here will probably increase, still further reducing our export trade. Finally, despite these drawbacks, the United States will continue to be a large exporter of wheat, and given large crops here and small crops in Europe, the quality of American wheat is apt to continue to recommend itself to European buyers.

Perhaps the most critical period in the life of the second Russian Duma has been that through which it has been passing during the last week or ten days. To all appearance its fate has been more than once in the balance, and its existence has been prolonged by the earnest efforts of Premier Stolypin on the one hand and of the Constitutional Democrats on the other. At one time toward the close of last week it was rumored that the Premier had been forced to resign, but instead he seems to have been able to maintain himself and to prevent a dissolution. It is generally recognized that one of the pitfalls in the way of the Duma was closed when the Constitutional Democrats succeeded in defeating the proposition of the radical members in favor of the compulsory expropriation of land. There are indications, however, that the end may be brought about as the result of Premier Stolypin's demand made yesterday for the exclusion of members of the Socialist-Democratic faction.

NO TWO-CENT FARE LAW IN NEW YORK.

In referring to the so-called 2-cent fare bill passed by the New York legislature a short time ago, we suggested that it would occasion no surprise if the governor should veto the bill, in view of the fact that the Public Service Commissions law just enacted confers upon state administrators very complete power to deal with the question of rates. This view has been borne out by the event. The governor on Tuesday transmitted to the legislature his veto of the measure in question with a memorandum which is of special interest at this juncture, in view of the extent to which legislation of this kind has recently obtained. The governor points out that the passage of the bill was not preceded by legislative investigation or suitable inquiry under the authority of the state, and that the fixing of the rate was not predicated on reports or statistics officially collated which would permit a fair conclusion as to the justice of its operation with reference to the railroads within its purview.

The governor leaves no ground for any misconception as to his position in reference to such legislation. He declares that it represents a policy seriously mistaken and pregnant with disaster. It is, he says, of the utmost importance that the management of our railroad corporations should be subject to strict supervision by the state; that regulations compelling the observance of the law and proper and adequate service should be rigidly enforced; that it is the duty of those corporations to provide transportation of passengers and goods at reasonable rates, and that the state should compel the performance of this obligation. On the other hand, the governor insists that injustice on the part of railroad corporations toward the public does not justify injustice on the part of the state toward the railroad corporations. The action of government, he adds, should be fair and impartial, and matters will be made not better but worse if to cure one wrong another be established. In dealing with questions such as those concerning the treatment of railroads, democracy must demonstrate its capacity to act upon deliberation and to deal justly.

It is, Governor Hughes continues, of the greatest importance not only that railroad corporations should be compelled to respect their public obligations, but also that they should be permitted to operate under conditions which will give a fair return for their service, for upon this depends not only the security of investors, but the security of their employees and the protection of every form of industry and commerce through the maintenance and extension of necessary transportation facilities. An arbitrary dislocation of tariffs by the fiat of the legislature without investigation by the legislature is, the governor urges, a matter of serious concern. The best that could be said for such legislation would be that it should be regarded as an isolated case and not as a precedent; for if flat freight rates, either for all commodities or for different kinds of commodities, were similarly to be fixed by the legislature without investigation or proper ascertainment of their justice, our railroad business and our industrial and commercial interests would be thrown into confusion.

Governor Hughes does not mean to be understood as saying that a maximum 2-cent passenger rate would be unreasonably low. He deems it most important, however, that the policy of dealing with matters of this sort arbitrarily by legislative rule of general application without reference to the demands of justice in particular cases should be condemned, because it not only threatens the stability of business enterprise, which makes our prosperity possible, but substitutes unreason for sound judgment and the ill-considered demands of resentment for the spirit of fair play, and makes impossible patient and honorable effort to correct abuses. In reference to the argument that many other states have adopted similar legislation, Governor Hughes says that if the principle of that legislation be sound the precedent could be readily followed, but if it be unsound there is the greater reason why it should not be followed.

There is, the governor declares, a better way, which has already been pointed out by the legislature of New York. In view of the nature of the problems before it and of the many questions requiring consideration at its hands, it is practically impossible for the legislature to deal directly with railroad rates in a satisfactory manner. When a matter requires investigation in order that a just result may be reached, the obvious course is to create a body which can investigate, with expert assistance, as summarily as possible, and which shall have adequate power to make appropriate orders, and such a body, the governor points out, has been created in New York by the recently enacted Public Service Commissions law. If it be said that the action of this body calls for time and investigation, it may be urged in reply, the governor adds, that it will not require any longer time or any more protracted investigation than is necessary to reach a right result. As has been said already, Governor Hughes's veto of the 2-cent fare law will occasion no surprise. The enunciation by him, however, of the doctrine set forth above, in his capacity as governor of the great commercial state of New York, is a matter of significance and of moment at this time, when, as he suggests, there is abroad a "spirit of impatience with the orderly processes of inquiry."

CROP REPORTS ADVANCE PRICES.

There was a slight check given in May to the reactionary tendency shown in the general price movement in recent months. In bringing this about the influence of the backward season and bad crop reports may be clearly traced in the large number of advances shown in products of the farm. Thus, of thirty-three products, distributed through seven classes of staples, advancing during the month of May, and causing higher quotations to be registered by the index number as a whole, more than one-half were, directly or indirectly, farm products, and a number of other staples were affected by the advances in these agricultural staples. On the other hand, a number of other agricultural products, notably butter, eggs, hogs and milk, not immediately affected by the weather moved lower, but the bulk of the declines were mostly of raw textiles, metals and naval stores.

The net result of the various movements during the month is best illustrated by the following table giving the index numbers (totals of prices per pound) at different dates by groups of commodities;

	July 1, 1896	*June* 1, 1906	*Mar.* 1, 1907	*May* 1, 1907	*June* 1, 1907
Breadstuffs	$0.0524	$0.0814	$0.0817	$0.0856	$0.0935
Live stock	.1855	.3165	.3345	.3295	.3325
Provisions	1.3619	1.7961	2.1049	1.9114	1.9343
Fruits	.1210	.1670	.2003	.2104	.1957
Hides and leather.	.8250	1.1750	1.1975	1.1750	1.2020
Textiles	1.5709	2.5497	2.7369	2.7378	2.7581
Metals	.3757	.7552	.8466	.8543	.8393
Coal and coke	.0048	.0066	.0080	.0074	.0073
Oils	.2082	.3087	.3428	.3663	.3900
Naval stores	.0402	.0930	.1170	.1058	.0990
Building materials	.0716	.0923	.0906	.0894	.0871
Chem. and drugs	.6607	.7683	.7083	.7083	.7141
Miscellaneous	.2150	.2705	.2732	.2442	.2592
Total	5.7019	8.3203	9.0393	8.8556	8.9101

It is here shown that the index number on June 1 this year was $8.9101, a gain of six-tenths of 1 per cent. over May 1, while a decrease of 1.4 per cent. from the high record of this year reached on March 1. Compared with a year ago the general level of staple values is 7.8 per cent. higher, while the advance over February 1, 1900, a high point for those days, is 8.2 per cent. Compared with the low point reached on July 1, 1896, the advance is 56 per cent. Fluctuations in the price level in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Nov. 1, 1905	$8.2097
July 1, 1896	5.7019	Dec. 1, 1905	8.3014
Jan 1, 1897	6.1164	Jan. 1, 1906	8.3289
July 1, 1897	5.8537	Feb. 1, 1906	8.2415
Feb. 1, 1900	8.2307	Mar. 1, 1906	8.2321
June 1, 1901	7.4186	April 1, 1906	8.2987

Examination of the detailed figures by groups shows that breadstuffs, live stock, hides and leather, textiles, oils, chemicals and miscellaneous products advanced, while the groups of provisions, fruits, metals, naval stores and building materials declined. Of 104 articles making comparison with the month previous, thirty-three, or nearly one-third, advanced, while twenty-three declined and forty-eight remained unchanged, as the following table shows:

JUNE 1, 1907, COMPARED WITH MAY 1, 1907.

INCREASES.		
Wheat	Beans	Pig iron, eastern
Corn	Peas	Pig iron, Bessemer
Oats	Potatoes	Silver
Flour	Apples	Anthracite coal
Sheep, live	Hides	Cotton-seed oil
Beef, carcasses	Oak leather	Castor oil
Mutton	Cotton	Alcohol
Pork	Print cloths	Tar
Bacon	Standard sheetings	Brick
Lard	Cotton sheetings, southern	Tobacco
Sugar		Ground bone
Rice		
DECREASES.		
Hogs, live	Salt	Copper
Hogs, carcasses	Lemons	Tin
Milk	Hemp	Connellsville coke
Eggs	Jute	Rosin
Butter	Silk	Turpentine
Cheese	Flax	Glass
Mackerel	Pig iron, southern	Rubber
Coffee	Steel billets	
UNCHANGED.		
Barley	Wool, Australian	Spruce timber
Rye	Ginghams	Hemlock timber
Beeves	Iron ore	Alum
Horses	Steel rails	Bicarbonate soda
Bread	Tinplates	Borax
Beef	Steel beams	Carbolic acid
Hams	Lead	Caustic soda
Codfish	Quicksilver	Nitric acid
Tea	Bituminous coal	Sulphuric acid
Molasses	Southern coke	Phosphate rock
Peanuts	Petroleum, crude	Opium
Raisins	Petroleum, refined	Quinine
Currants	Linseed oil	Hops
Hemlock leather	Olive oil	Paper
Union leather	Nails	Hay
Wool, O. and Pa.	Yellow pine	Cotton seed

The changes from a year ago are shown in the following table:

JUNE 1, 1907, COMPARED WITH JUNE 1, 1906.

INCREASES.		
Wheat	Rice	Steel beams
Corn	Peas	Copper
Oats	Peanuts	Lead
Barley	Raisins	Tin
Flour	Currants	Bituminous coal
Beeves	Hides	Southern coke
Sheep, live	Oak leather	Petroleum, crude
Horses	Cotton	Petroleum, refined
Beef, carcasses	Wool, O. and Pa.	Cotton-seed oil

Union leather	Borax	Phosphate rock
Wool, Australian		

Here, it will be seen, sixty-five products out of 105 are higher, while twenty-four are lower and sixteen are unchanged.

RAILWAY GROSS EARNINGS SHOW HEAVY GAINS.

For about four months prior to March of the current year railway gross earnings displayed a drooping tendency, for which adverse weather conditions were, in the main, responsible, but since the last mentioned month developments in this respect have been highly favorable. Thus, in March the increase over the corresponding month in 1906 was 8 per cent., while in April the gain was 16 per cent., and in May, the latest period for which returns are available, the increment was 15.1 per cent., which, singularly enough, was the ratio of gain virtually for May, 1906. Of course it is well understood by this time that the railways have been favored by a heavy tonnage; in fact, this phase of the subject has become quite threadbare. However, it is not amiss to say that operating conditions in recent months have become rather favorable in many respects; that is, congestion has practically passed away and the supply of cars is more plentiful, the result being that deliveries are made more promptly. At the same time the tonnage now passing over the railroads is of a diversified character, the kind that produces goodly revenues. Indeed, one direct effect of the improvement in the supply of rolling stock is seen in the heavily increased shipments of cereals to primary markets. Now, while the gain in May the current year is of satisfactory proportions, it must not be forgotten that the coal miners' strike, especially in the bituminous fields, in May, 1906, temporarily reduced gross earnings on some of the roads. This fact must be taken into consideration when analyzing the gains shown in May this year by such roads as the New York Central & Hudson River, the Buffalo, Rochester & Pittsburgh and the Wheeling & Lake Erie. But leaving history aside, the fact is that what might be termed the swing of gross earnings is still upward.

For the month of May gross earnings, based on preliminary reports thus far made,

aggregated $82,728,103, the gain over the like month in 1906 being $10,829,677, or 15.1 per cent., which increase is cumulative, in that it caps increases that have been made in May for a number of years past. Every section of the country, barring the south, furnished notable increases to the grand total for May, which statement is corroborated by the following exhibit of returns for May, 1907 and 1906:

	1907	1906	*Inc.*
Northwestern	$9,350,044	$7,430,414	25.8
Central-western	14,847,903	12,752,412	16.5
Trunk lines	19,360,400	17,249 379	12.2
Southern	13,650,498	12,902,615	5.8
Southwestern	10,430,181	8,867,461	17.7
Pacific	15,089,077	12,696,145	18.8
Total	82,728,103	71,898,426	15.1

A glance at the column showing the ratio of increase reveals some very large gains. Thus, the northwestern lines furnish an advance of 25.8 per cent., while the Pacific roads contribute one of 18.8 per cent.; the southwestern roads show an increment of 17.7 per cent., the central-western one of 16.5 per cent., and the trunk lines one of 12.2 per cent. The southern roads report the smallest ratio of increase—5.8 per cent. For historical reasons it is well to note the swing of railway gross earnings over an extended period, and for that purpose this table of monthly changes for a series of years is submitted:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	8.0	9.5	10.3	.05	14.5	6.7	7.4
April	16.0	11.7	8.7	4.5	14.3	11.2	8.9
May	15.1	14.7	9.5	3.5	12.0	9.0	9.2
June	..	13.3	6.3	.6	14.1	8.1	6.8
July	..	14.1	7.4	1.4	12.3	7.5	13.3
August	..	13.1	5.1	*3.4	9.4	4.6	13.2
September	..	9.3	6.3	*4.0	7.9	9.6	10.5
October	..	11 2	5.9	*4.0	5.5	6.6	11.8
November	..	4.6	9.1	*9.9	4.0	7.2	12.1
December	..	5.7	9.9	*8.0	4.6	9.4	5.5
Year	..	12.7	5.9	*1.4	11.5	8.0	10.5

*Increase. †Decrease.

For the month of May many roads report heavy individual gains as compared with May, 1906. Thus, the Canadian Pacific shows an increase of $1,344,000; the Great Northern system, $1,258,519, and the New York Central & Hudson River, $1,168,364. This list brings out the facts in this respect, the gains being set down in order of importance:

Canadian Pacific	$1,344,000
Great Northern system	1,258,519
New York Central & Hudson River	1,168,364
Northern Pacific	935,232
Missouri, Kansas & Texas	584,101
Illinois Central	576,133
Grand Trunk	504,970
Buffalo, Rochester & Pittsburgh	462,409
Texas & Pacific	335,706
Missouri Pacific system	333,000
Cleveland, Cincinnati, Chicago & St. Louis	302,806
Michigan Central	272,373
Minneapolis, St. Paul & Sault Ste. Marie	262,502
Wabash	262,206
Canada Northern	260,600
Wheeling & Lake Erie	237,675
Southern	166,684
Louisville & Nashville	146,762
Colorado & Southern	132,993
Cincinnati, New Orleans & Texas Pacific	120,353
Lake Shore & Michigan Southern	118,549
St. Louis Southwestern	116,026
Denver & Rio Grande	113,700
Western Maryland	109,863
Chicago, Indiana & Southern	76,257
Mobile & Ohio	75,909

Returns for identical roads for the elapsed portion of the fiscal year are given in the appended table:

	1906-07	1905-06	*Increase*	*P. ct.*
July	$80,800,673	$70,805,720	$9,994,953	14.1
August	78,771,383	69,593,637	9,177,746	13.1
September	79,270,463	72,521,836	6,748,627	9.3
October	86,650,834	77,911,337	8,739,497	11.2
November	86,842,493	82,983,127	3,859,366	4.6
December	83,007,364	78,548,032	4,459,332	5.7
January	69,909,545	68,272,841	1,636,704	2.4
February	61,847,147	60,613,077	1,234,070	2.0
March	76,623,443	70,915,286	5,708,157	8.0
April	79,282,674	68,316,988	10,965,686	16.0
May	82,728,103	71,898,426	10,829,677	15.1
Eleven mos.	865,734,122	792,380,307	73,353,815	9.2

It will be seen that the increase for the eleven elapsed months of the fiscal year amounts to 9.2 per cent.

THE LEADING NATIONS AT THE HAGUE CONFERENCE.

Within the last week or two special efforts have been made by the press representatives at the principal European capitals, as well as at Washington, to elicit the sentiments of the leading governments regarding the questions to come before the second Peace Conference which will open at The Hague this afternoon. As a result it seems safe to say that, speaking within limitations, they have been able to reflect with substantial accuracy the attitude of the nations which will play a determining rôle in the work of the conference. The matter has naturally been the subject of discussion at St. Petersburg, where a series of conferences have lately been held between M. Nelidoff and his associates and the officials of the Foreign Office, and some conclusions have been arrived at tentatively. It is understood that, adhering to a position previously assumed, the Russian government is not favorable to any discussion of the subject of disarmament, which it believes cannot lead to any useful result, and it appears to be hopeful of an agreement between the leading nations as the result of which a discussion of it may be postponed or, at any rate, limited in range.

Stress appears to be laid by the Russian government upon the importance of developing the machinery and the practical usefulness of The Hague tribunal and of the international commissions of investigation established by the first conference. It is desired by the St. Petersburg diplomats that the scope of the tribunal's authority be enlarged and that provision be made for an official language, the need of which has been disclosed in proceedings already had under its auspices. Other questions regarded as of high importance are those relating to maritime warfare, particularly the definition of the rights and obligations of neutrals. Included in these is the very vexed question of contraband, the treatment of which, it is hoped, will be systematized and brought under precise regulation, with as a possible consequence the establishment of an international prize court of highest instance.

Like Russia, Germany does not look for practical results from a discussion of the question of disarmament, believing that more may be done by the conference in the direction of eliminating war by laboring to extend the peaceful adjustment of disputes by agreement than by debates upon the limitation of armaments. In accordance with this policy it is understood that the German delegates will not take any part in a discussion on disarmament should that be broached, but will content themselves with noting the development of the question. The German diplomats count among the most important matters to be dealt with by the conference those relating to the rights of private property at sea. It is recognized that the exemption of private property from capture would call for very precise agreements as to regulations regarding contraband to avoid friction with some of the greater sea powers, but it is thought that on general lines the German government will be in substantial sympathy with that of the United States on this subject.

As has been generally understood for some time, Austria-Hungary will stand with Germany in regard to the general question of disarmament, and is likely to take a similar attitude on most other questions. Italy is expected to pursue a middle course in the conference. At the outset it was counted upon as ready to support the British initiative on the question upon humanitarian grounds. After the meeting between Chancellor von Buelow and Signor Tittoni a short time ago, however, the views of the Italian Premier seemed to undergo a modification, for he announced on May 15 that Italy would adhere to the general reservation of Germany and Austria on the subject, though not averse to taking part in a discussion of it along the lines suggested by Great Britain. Italy is seemingly disposed to welcome an extension of the functions of The Hague tribunal. It is assumed that for well-understood reasons France will not be found among the advocates of disarmament under present conditions. According to M. Pichon, its Foreign Minister, it will play an unrestricted rôle of moderation and conciliation. In reality its international relationships force upon it a policy of caution, though it will be found promoting the extension of the principle of arbitration. It is assumed that Spain and Portugal will, speaking generally, follow England's lead. Norway is desirous of having the disarmament question discussed. Its delegates will favor every movement tending to maintain the peace of the world, and having a special interest in improving the rules of maritime warfare, will spare no efforts to safeguard the rights of neutrals. In the latter direction it will be in fellowship with Denmark. Switzerland does not expect to exert much influence in the conference, but it may be counted upon to support measures looking to the promotion of arbitration.

On all sides it is expected that the delegates from the United States will play a prominent part in the conference. It is under the auspices of the great republic that its sister nations of the western hemisphere will participate in the proceedings of that body. It may be taken for granted that so far as possible it will occupy advanced ground in reference to every proposition making for the peaceful adjustment of international differences. It will advocate the widening of the authority of The Hague tribunal and the strengthening of its personnel, the extension of the principle of arbitration, and the immunity of private property at sea. Whether the delegates from the United States will take the initiative in laying the subject of disarmament before the conference is not known. The instructions of the British delegates have not been made public, but it has been rumored of late that the London Cabinet would not be averse to having the question presented by the United States. In any event, as has been already intimated, the interest in a discussion of it can hardly be other than academic in view of the attitude of some of the more important European nations, to which attention has been directed above.

LESS THAN AVERAGE CROP YIELDS INDICATED.

The one central fact brought out in the June 1 report of the Department of Agriculture is that, owing to the backward season, cold weather or other causes, the prospect is for less than average yields of all leading crops. Bearing on this statement, the following table gives the condition of winter and spring wheat, oats, barley and rye on June 1, as compared with conditions on the same date of 1906 and 1905, and the average figures for ten years past:

	June 1, 1907	*June* 1, 1906	*June* 1, 1905	10-*year average*
Winter wheat	77.4	82.7	85.5	81.1
Spring wheat	88.7	93.4	93.7	93.3
Oats	81.6	85.9	92.9	89.7
Barley	84.9	93.5	93.7	89.8
Rye	88.1	89.9	93.6	90.2

It will be seen here that the condition of the above crops on June 1 is not only below the average, but is below the condition reported on June 1, 1906 and 1905. How poorly the prospects compare with other years at this date is perhaps best shown by the following table:

June 1	*Winter wheat*	*Spring wheat*	*Oats*	*Barley*	*Rye*
1907	77.4	88.7	81.6	84.9	88.1
1906	82.7	93.4	85.9	93 5	89.9
1905	85.5	93.7	92.9	93.7	92.3
1904	77.7	93 4	89.2	90.5	86.3
1903	82.2	75.9	85.5	91.5	90.6
1902	76.1	95.4	90.6	93.6	88.1
1901	87.8	92.0	85.3	91.0	93.9
1900	82.7	87.3	91.7	86.2	87.6
1899	67 3	91.4	88.7	91.4	84.5
1898	90.8	101.0	98.0	78.8	97.1

Winter wheat, it will be seen, is lower than in all but two of the past nine years, and the same is true of spring wheat, while the condition of oats is the lowest there is record of. Barley condition is the lowest since 1898, while rye condition is higher than in three out of nine years. In addition, the facts as to the acreage sown show that most crops are seeded to a smaller area this year than last. Thus winter wheat on May 1, according to the government report, covered only 28,132,000 acres, as against 29,623,000 acres a year ago; the spring-wheat area is only 16,464,000 acres, a decrease of 1,242,000 acres, or 7 per cent., from last year, and the area in barley is 171,000 acres, or 2.7 per cent. less than a year ago. The oats area sown is 31,491,000 acres, a gain of 532,000 acres, or 1.7 per cent., over the area sown (revised) last year. The following tables show the condition of winter and spring wheat and of oats in leading producing states at various dates:

SPRING WHEAT.

	Acreage	*Condition June* 1, 1907	1906	1905	10-*yr. av'ge*
Minnesota	90	86	91	92	93

Texas	44	43	87	76	81
Michigan	75	75	75	95	73
United States	77.4	82.9	82.7	85.5	81.1

OATS.

	Acreage	*Condition June* 1, 1907	1906	1905	10-*yr. av'ge*
Iowa	100	85	94	96	94
Illinois	100	86	75	93	88
Wisconsin	104	87	95	95	94
Nebraska	103	85	87	90	92
Minnesota	104	89	93	93	93
Indiana	102	85	60	97	87
Ohio	102	83	76	92	84
Michigan	103	75	92	89	90
South Dakota	103	89	96	93	93
North Dakota	106	89	95	94	93
New York	97	87	94	94	91
Pennsylvania	95	82	82	90	87
Kansas	104	30	65	81	83
United States	101.7	81.6	85.9	92.9	89.7

Quantitative estimates of yield this early in the present season are more than ordinarily risky this year because of the peculiar conditions which have ruled, but the following figures are cited as offering a

general trade view of possibilities, based upon area and condition figures as of June 1, with comparisons of actual yields in recently preceding years:

	Winter wheat	*Spring wheat*	*Total wheat*	*Oats*
1907....	379,782,000	255,192,000	634,974,000	979,370,000
1906....	492,888,000	242,372,000	735,260,000	964,904,522
1905....	428,462,834	264,516,655	692,979,489	953,216,197
1904....	332,935,349	219,464,171	552,399,520	894,595,552

As to the above estimates, it may be said that the prospect is for a decrease of at least 100,000,000 bushels in wheat from a year ago, but the application of the average figures this year is more than ordinarily risky because of the peculiar conditions. One example of this is afforded in the state of Kansas. The government figures show a drop of 22 points in this the leading wheat-producing state in one month, and a condition 14 points below a year ago. In addition, however, the question of area still under wheat comes up for notice. The government report for May reported only 4.8 per cent. abandoned; the Kansas state report, published one month later, gives the area abandoned as 21 per cent., or over one-fifth of all planted in December last. It is the prevalence of conditions such as these which throws doubt upon any quantitative estimates issued at this time. This year, apparently more than ever before, the outturn of the crops seems likely to be uncertain until the final harvesting and threshing returns are compiled, but the conclusion is hardly avoidable that large yields can only be made possible by exceptionably favorable conditions during the balance of the growing season.

A CONSERVATIVE VIEW OF THE COTTON-CROP OUTLOOK.

Louisville, June 11.—This city is the central gateway between the north and south, and her trade and general commercial interests are largely, in fact mainly, toward the south. Southern crop reports are, therefore, carefully considered in this market. Visiting buyers from the south here during the past week say that the cotton states are now up against a proposition which is entirely new to them, namely, that of raising a cotton crop planted after June 1. In other words, the weather conditions, due to extraordinarily cold and rainy weather during April and May this season, have been so extremely unfavorable that the bulk of the cotton acreage must depend upon planting and germination after June 1 this year instead of during April and May, the customary season for planting and germinating. It remains to be seen, therefore, if a considerable cotton yield can result from cotton planted after June 1. It is true that in seasons of overflows it has occasionally happened that the floods did not recede until about June 1, and that much cotton planted on these lands after the floods receded in early June brought good harvests, but these harvests resulted only when the June weather was excessively hot and the remaining months of the cotton-growing season were hot and dry, resulting in rapid germination, and in every way favorable conditions for the growth and maturity of the plant. Therefore, unless the weather from now forward should be exceedingly favorable, the chances are that the great bulk of the cotton acreage in the south will not be able to overcome the handicap of the unusually late start under which it is now struggling.

The cotton lands of the south are in the main marvelously rich, though a great proportion of the same are thin lands which require a heavy application of fertilizer. Cotton planters, who after reserving last winter a normal amount for seed, sold the remainder of their cotton seed at $15 per ton to the oil mills, have during recent weeks been struggling to buy enough seed back for replanting at $100 per ton. Merchants here who handle cotton goods say that the cotton mills have already advanced prices of cotton goods, generally speaking, sufficiently to represent raw cotton at 15 cents per pound, so that the unfavorable prospects at this time have already been anticipated, they think, by the sharp advance in cotton goods.

A kind providence seems always to come to the rescue of the cotton planters, and while an excessive or even full crop on present agricultural conditions seems out of the question, favorable weather from this time forward may bring a moderate to fair crop; but exceedingly favorable growing weather, a late fall that will favor prolonged development of the plant, and ideal harvesting conditions, are requisite to produce anything approximating an average or even a moderate crop, in the opinion of experienced observers in the Louisville market. OBSERVER.

EDITORIAL NOTES.

The total world's visible supply of wheat on June 1, comprising the stocks reported in this country and Canada by BRADSTREET'S, and those in Europe and afloat therefor reported by the Liverpool *Corn Trade News*, aggregated 155,600,000 bushels, a decrease of 12,600,000 bushels from May 1, but an increase of 29,200,000 bushels over the stock held on June 1 a year ago, and a gain of 44,300,000 bushels over the stock held on June 1, 1905. Two-thirds of the decrease shown from May 1 this year occurred in America, the bulk of this, by the way, in Canada, as was noted last week. The stocks in Europe, it will be seen, are 4,300,000 bushels smaller than on May 1 this year, but are little changed from those held one and two years ago at this time, so that the entire excess over one and two years ago at this date is held in America. The following figures show the American and European stocks of wheat on the first of each month since January 1, 1905, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*

More or less confidence finds expression in copper market circles that the stagnation prevailing for a month or so past in that quarter will be relieved, and that large consumers will again buy on a considerable scale to supply their requirements. Manufacturers of copper goods for the most part, after buying extensively last February and March, their purchases being so arranged in respect to deliveries as to meet all their demands up to the end of June, have been holding off with respect to July deliveries, in spite of the fact that with copper prices standing at around 23 cents for electrolytic, there has been a considerable drop in the price of the metal. It would seem, indeed, that contracts for the July delivery should be made on a fairly large scale, but it is pointed out by competent authorities that manufacturers are no longer booking orders on anything like the recent basis. In fact, new business is much smaller than heretofore, and factories are catching up with their orders on hand at a rapid rate. In this connection the difficulty of financing new electrical or traction enterprises, which kind of work is one of the largest elements in creating a demand for copper, is an important element. There is accordingly a disposition to argue that the copper situation is one in which consumers will buy sparingly and merely contract for sufficient of the metal to meet their immediate needs, thus creating a possibility that stocks on hand will at last begin to accumulate in the hands of smelters and other producers and cause, in the end, a further shrinkage in prices.

During the present week the New York Central & Hudson River Railroad Company and the other railway corporations comprising the Vanderbilt system of lines declared their regular dividends, the rate for the half year being in each case unchanged, with an exception in the case of the Lake Erie & Western Railroad Company. That company, which paid 2 per cent. in January and 3 per cent. in July, 1906, on this occasion made its half-yearly dividend 1 per cent., the statement being made that the falling off in the net earnings, which occasioned this reduction, was the result of competition in its territory by electric trolley lines. This is certainly a novel explanation for a reduction in net revenues, which in practically all other cases has been attributed to increased operating cost. The most important development accompanying the Vanderbilt dividend meetings and dividend declarations was, however, the announcement that, contrary to the usual custom of those companies, their managements have decided to discontinue the publication of the earnings for the half year, a part of the same being from estimates and not actual returns of revenue. It is considered not at all improbable that the recent rulings made by the Interstate Commerce Commission on the subject of railroad accounting methods may have had something to do with this change in a time-honored custom.

It was pointed out last week that the annual report of the Amalgamated Copper Company, covering the year which ended April 30, 1907, while in the main quite satisfactory, inasmuch as the earnings were $14,000,000, compared with only $9,000,000 in the preceding fiscal year, failed to come up to the expectations which were entertained in speculative quarters as to the magnitude of the earnings which it would exhibit. The explanation generally vouchsafed was that the Amalgamated had included in its earnings only the cash dividends which it received from its subsidiary organizations, the point being made that it did not include its proportion of the entire net earnings of the latter. Some light is thrown on the subject by the publication a few days ago of the statements filed with the tax commissioners at Butte, Mont., by the subsidiary organizations in which the Amalgamated Company is interested, to a greater or less extent, in that district, and which include its principal revenue producers, for the year ending May 31. The concerns in question, which include the Anaconda, Boston & Montana, Butte & Boston, Parrot and Washoe, as well as the Butte Coalition and North Butte Mining companies, in which the Amalgamated has some interests, make the following aggregate showing, the returns for the year just ended being contrasted with those of the two preceding years:

	1907	1906	1905
Tons ore extracted	4,013,407	3,810,958	3,293,980
Gross proceeds.....	$52,411,450	$46,448,288	$33,749,395
Costs and improvements	33,252,436	30,529,887	25,175,694
Net proceeds.....	19,159,014	15,918,401	8,573,701
Costs alone	32,529,273	28,833,004	24,808,183
Net proceeds.....	19,882,177	17,615,284	8,941,212

From this it will be seen that the net earnings of $19,882,000 would agree fairly well with the proportion thereof which came to the Amalgamated Copper in the form of dividends, while the expenditure of no less than $33,000,000 for "costs and improvements" is understood to represent heavy expenditures out of earnings for the enlargement of the plants.

Although it is asserted by the officials of the New York, New Haven & Hartford Railroad Company that there is no existing legal obstacle to carrying out the proposed deal whereby that corporation is to acquire control of the Boston & Maine system, serious opposition has been developed to the execution of the project. It would seem that a large majority of the holders of Boston & Maine stock are favorable to the proposition, but, on the other hand, certain large stockholders oppose it vehemently and have presented their grounds for opposition before the legislative committee on railroads at Boston. That body has been in session this week and has heard the arguments of both the opposition and of the railroad company, the drift of the matter being plainly toward the enactment of some measure designed to safeguard the interests of Massachusetts and of the city of Boston, the most effective argument in that respect being based upon the theory that if the proposed merger were carried out without proper restrictions it might have an unfavorable influence upon the traffic of the port of Boston, although the contention of the New Haven people is that it would benefit, rather than harm, that port. It may be noted that President Tuttle of the Boston & Maine intimated that the indirect cause of the passing of the control of his road to the New Haven was the hostility of Massachusetts laws to vested interests, and gave his approval of the merger in an unqualified way. A circumstance of considerable interest developing in connection with this deal is that while the New York Central obtains an option upon the New York, Ontario & Western, it grants to the New Haven system trackage rights over portions of the Boston & Albany Railroad which is leased to the New York Central.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Municipality—Illegal Acts—Taxpayer.

The Supreme Court of Pennsylvania held, in the case of Wolff Chemical Company vs. City of Philadelphia, that a taxpayer's bill to restrain illegal acts of city officials in the appropriation of a public fund might be brought by a corporation which was a resident and taxpayer, though the fund was raised by a loan authorized by the electors of the city and not by the taxpayers.

Notes—Machinery—Counterclaim.

The Supreme Court of North Carolina held, in the case of Case Manufacturing Company vs. Moore, that where three purchase-money notes were given for the purchase price of machinery, and in an action on the second note the defendants pleaded a counterclaim for defects in the machinery and recovered thereon, they were barred from setting up substantially the same counterclaim in an action on the third note.

Peddler's Notes—Indorsement.

In the case of Lawson et al. vs. First National Bank of Fulton, recently decided by the Kentucky Court of Appeals, it appeared that certain notes sued on were not indorsed "peddler's notes," as required by the state statutes. The court held that the parties to them were never bound because they were void, and that the negotiable instruments act did not apply to the case. That act, the court said, should be read in view of its purpose, and not as intending to repeal other statutes passed in the exercise of the police power of the state to suppress crime and fraud.

Oil—Escape—River—Damages.

The Court of Appeals of the District of Columbia held, in the case of Brennan Construction Company vs. Cumberland et al., that where petroleum residuum and coal tar escaped from a tank owned by the appellant into the Potomac river and was carried about four blocks below to a point where plaintiffs, who were engaged in the business of hiring, building and storing boats, had their boathouse, causing damage to the appellees, the escape of the oil from the appellant's tank was the proximate cause of the injury, and that the appellant was liable whether or not it was guilty of negligence in respect of the escape of the oil.

Water—Diversion—Crop Damage.

The Supreme Court of Minnesota held, in the case of Block et al. vs. Great Northern Railway Company, that where a railroad company in constructing its road diverts surface water from its natural channel, it is a question of fact under the circumstances whether a new permanent outlet for the water should be provided. It appeared that in laying its railroad the company made a cut through a certain ridge of ground, thereby diverting surface water which had a natural outlet in another direction. After the construction of the cut, and about a mile north thereof, a ditch was made by a private party draining a large area of marshy land and thereby increasing the amount of water flowing through the railroad cut. The court held that, it not having been shown whether damage occurring to the plaintiff's crop would have been occasioned by the diversion of water by the defendant company had the other ditch not been made, the evidence was not sufficient to prove that the acts of the defendant in so diverting the water was the proximate cause of the injury.

Interstate Commerce—Logs—Carrier.

The Supreme Court of Minnesota held, in the case of State of Minnesota vs. Taber Lumber Company, that logs which are cut, banked and boomed upon the ice of a lake with the intention of exporting them from the state do not become articles of interstate commerce in transit until delivered to a common carrier for such purpose of exportation, and that such logs, although destined for exportation, do not cease to be part of the general mass of property in the state while any substantial part of the work of delivery to the common carrier remains to be done. In the case before the court it appeared that the owner of standing timber entered into a contract with a lumber company to cut and convert the same into logs and to deliver them to the owner at a point within the state beyond the initial carrier. The court held that the lumber company was the constituted agent of the owner for the purpose of delivering the logs to the carrier; that the work of towing logs in the lakes to the booms, where they were hoisted from the water on to cars for shipment, was a part of the process for delivery, and that it was immaterial that the lakes, upon the ice of which the logs were banked and boomed, were navigable waters, the owner, through his agent, having adopted that method as a means of conveying them to the hoists.

Carrier's Liability—Shipment—Fire.

The Kentucky Court of Appeals held, in the case of Southern Railway Company vs. Smith, that where goods are delivered to a carrier for immediate shipment and nothing remains to be done by the shipper, the liability of the carrier as carrier attaches at once, and that even while detained in the carrier's warehouse in the usual course of business or for the carrier's convenience, the liability of the carrier is that of a carrier proper and not that of a warehouseman. The court further held that where in an action by a shipper against a carrier for the value of goods destroyed by fire while in the carrier's depot, the carrier defended on the ground that the fire was caused by lightning, and this question was fairly submitted to the jury by the court, the evidence being so conflicting as to leave the mind in doubt as to how the fire originated, the verdict of the jury awarding damages should not be set aside.

Loan—Extra-State Contract.

The Court of Appeals of the District of Columbia held, in the case of Croissant et al., Executors, vs. Empire State Realty Company, that a loan made by a building association incorporated under the laws of New York to a shareholder residing in the District, which loan was arranged for and the bond and mortgage executed and delivered in the District, where the mortgaged real estate was also located, was a contract governed by the laws of the District in the absence of any provision therein declaring that it should be governed by the laws of another jurisdiction. The court further held that under the rule prevailing in the District of Columbia in settlements between a borrowing shareholder and an insolvent building and loan association, the former was to be charged with the amount actually received by him, with legal interest, and credited with all payments made, whether by way of dues, interest or premiums, according to the rule governing partial payments.

Constitutional Law—Street Easements.

In an action brought by an abutting owner to enjoin the city of New York from maintaining the viaduct built on One Hundred and Fifty-fifth street in that city, under chapter 576 of the laws of 1887, or to recover damages in the alternative, the Supreme Court of the United States held (Sauer et al. vs. The City of New York) that the refusal of the court to allow to abutting owners such relief did not present a federal question within the provisions of the Fourteenth Amendment of the United States Constitution. The court held that the questions as to whether an owner of property fronting upon a street in a city has street easements, and as to the nature, extent or limitations of such easements, are questions entirely for the state courts, and that where the highest court of New York state had determined that the plaintiff's intestate never owned the easements which he as an abutting owner claimed, and that there was therefore no property taken, there was no violation of the Fourteenth Amendment to the Federal Constitution reviewable by the United States Supreme Court.

Emp'oyers' Liability—Car—Lights.

The Court of Appeals of the District of Columbia held, in the case of Carter vs. McDermott, that where reasonable care for the safety of employees requires an electric railway company to maintain a light on the rear end of its cars when in operation after sunset, the duty of equipping its cars with such light is an imperative duty resting upon the company, and one which it cannot delegate so as to escape liability for injuries suffered by a servant by reason of omission or neglect on the part of the agent or servant intrusted therewith. The court added that the fact that the company provided such lights and placed them on the curb at a point on its line distant from the car barn, and promulgated a rule requiring conductors on reaching that point to equip their cars with such lights, would not absolve it from liability to an employee injured in a collision by reason of the failure of the conductor of the forward car to equip his car with the light so provided, there being nothing to show that it was impossible or impracticable to equip the cars with lights before leaving the barn. The failure of the conductor to equip his car was, the court said, the failure of the company, for which the latter was responsible.

BUSINESS NOTES.

Leading Producers of Boots and Shoes.

Thirteen cities of the United States produce practically 50 per cent. of the country's output of boots and shoes. These thirteen cities are given in order of importance in the following:

	Rank, 1905	Value of products, 1905	Rank, 1900	Value of products, 1900	P.ct. inc.
Brockton, Mass...	1	$30,073,014	1	$19,844,397	51.5
Lynn, Mass.....	2	25,952,571	2	16,830,733	54.2
St. Louis, Mo.....	3	19,101,166	6	8,285,156	130.5
Haverhill, Mass .	4	15,257,899	3	15,231,440	.2
New York, N. Y..	5	11,905,374	4	9,124,495	30.5
Cincinnati, Ohio..	6	10,596,928	5	8,513,424	24.5
Rochester, N. Y..	7	8,620,011	7	6,933,111	24.3
Marlboro, Mass .	8	6,620,455	12	3,852,931	71.8
Manchester, N. H.	9	6,567,903	10	4,052,204	62.1
Chicago, Ill.....	10	5,592,684	9	5,723,126	*2.3
Boston, Mass.....	11	5,575,927	11	3,882,655	43 6
Columbus, Ohio ..	12	5,425,087	13	3,505,126	54.8
Philadelphia, Pa..	13	5,171,859	8	5,931,045	*12.8

* Decrease.

It will be seen that in 1905 Brockton and Lynn retained the positions which they held in 1900, first and second respectively. St. Louis, the growth of which as a shoe-manufacturing center has been remarkable, the increase for the half decade being 130.5 per cent., moved up from sixth position in 1900 to third place in 1905, ousting Haverhill, Mass., from that rank.

Northwestern Wheat Area and Conditions.

The Duluth *Commercial Record* holds the opinion that "the spring-wheat area of the northwest, in spite of all contrary reports, will not show much, if any, decrease. Many sections in the northwest are reporting decreases running from 10 to 40 per cent., but figures such as the latter are ridiculous on their face, and in all cases where decreases are reported it will be found to be almost invariably the case that they occur in the older settled sections of the country, where decreases are to be expected, owing to the gradual shifting of wheat areas into other crops, principally fodder. Casual estimators of the northwestern wheat area—and it is also true of the government reporters—are prone to overlook the large areas that go into wheat for the first time each year. In round figures the cultivated area in the northwest is very close to 40,000,000 acres, and for years past it has increased at the rate of 3 to 5 per cent. a year, or between 1,250,000 and 2,000,000 acres, practically all of which is seeded to wheat either the first or second year, and accounts for a very large area that is abandoned. Of course it is true that the late season has resulted in considerable ground not being seeded to wheat that otherwise would; but, on the other hand, there was an enormous area broken up last year in both North and South Dakota that will go into wheat this year for the first time, and there is also a very large area in the Red river valley on both sides that is being cropped for the first time in several years, and a very material percentage of it is being put into wheat." The authority mentioned does not look for a decrease of more than 2 or 3 per cent.

Short Route from New York to Chicago.

Between New York and Chicago the air line distance is less than 700 miles. By the shortest rail route, the Pennsylvania's, the distance is 911 miles; by the next shortest, the New York Central's, it is 960 miles. The Pennsylvania via Pittsburgh swings 100 miles south of the straight line, while the Central reaches nearly 150 miles north of it on the route via Albany and Buffalo. According to the *Railway Age*, "these great competitors have been planning and working to reduce the mileage, as well as the grades and alignment, between their principal termini, and it begins to seem possible that some time the fastest trains between New York and Chicago will leave both Pittsburgh and Buffalo out of their route. The Pittsburgh *Gazette* sounds the warning that ere long the people of that city will wake up and find that Pittsburgh is not even a way station for the magnificent through fliers between New York and Chicago, and Buffalonians will awake to the same fact with regard to the New York Central. The Pennsylvania, the *Gazette* calls to mind, is buying its right of way for a new line which will make a short cut from its lines east of Pittsburgh to its lines west. By constructing about thirty miles of road to connect existing branches it may have a new route from Tipton, near Altoona, via Mayport and Red Bank, to Enon, on the Fort Wayne line, which will save fourteen miles over the Pittsburgh route and avoid heavy grades and the congestion of that busy city's terminals. The New York Central can do better than that when it completes the costly Clearfield-Franklin line of 107 miles, now well along, provided that from Williamsport to New York, over 300 miles, it uses the Reading-Jersey Central tracks or acquires a line of its own. It may thus save some eighty miles over the Albany-Buffalo route and reduce the New York-Chicago distance to less than 900 miles. These are possibilities. Whether or not they are soon to be realities is an open question."

Condition of National Banks.

The Comptroller of the Currency has published his abstract of the returns of the 6,429 national banks in the United States under call of May 20. Changes in important items, compared with the last return, that of March 22, are as follows:

	Increase
Loans and discounts	$95,290,504
Specie	30,627,985
Legal tenders	4,742,602
Total cash	35,370,587
Due other national banks	15,900,308
Due state banks and bankers	*10,300,376
Due trust companies and savings banks	41,404,670
Individual deposits	53,368,512

Compared with a year ago (June 18) these same items show the following changes:

	Increase
Loans and discounts	$421,253,614
Specie	44,624,652
Legal tenders	*4,369,108
Total cash	40,254,544
Due other national banks	79,117,514
Due state banks and bankers	34,344,935
Due trust companies and savings banks	22,600,088
Individual deposits	267,006,504

* Decrease.

Following are the more important items of the present return.

Resources—	*May* 20, 1907	*March* 22, 1907	*June* 18, 1906
Number of banks:	6,429	6,344	6,053
Loans:	$4,631,143,692	$4,535,844,098	$4,206,890,078
United States bonds to secure circulation:	554,029,150	548,788,350	516,871,650
United States bonds to secure government deposits:	95,821,850	95,416,550	66,534,380
Other bonds to secure government deposits:	95,418,233	62,867,363	27,455,332
United States bonds on hand:	6,924,030	7,700,850	8,158,300
Premium on United States bonds:	14,408,969	13,663,984	13,172,695
Bonds, securities, etc.:	679,016,228	682,575,676	651,171,903
Specie:	530,713,909	500,685,914	485,987,257
Legal tenders:	160,877,239	156,134,637	165,246,347
Cash reserve:	691,591,148	656,220,551	651,233,604
Liabilities—			
Capital stock:	883,690,917	873,669,666	826,129,785
Surplus fund:	534,794,629	523,216,913	448,858,492
Undivided profits:	185,618,410	182,549,115	216,304,876
Bank notes outstanding:	547,918,696	543,320,375	510,860,726
Due other national banks:	875,767,698	859,867,390	796,650,184
Due state banks and bankers:	397,038,415	407,338,791	362,693,480
Due trust companies and savings banks:	372,404,269	330,909,599	349,804,181
Due reserve agents:	40,329,666	39,042,929	36,119,635
Individual deposits:	4,322,880,141	4,269,511,629	4,055,873,637
Per cent. of legal reserve:	21.22	20.74	21.44
Per cent. of all reserve:	25.79	25.45	26.23

Important items in the report compare as follows for the corresponding date in previous years (three figures omitted):

	Loans	*Total cash*	*Indiv. deposits*	*Due other banks, etc.*
1907	$4,631,143	$691,591	$4,322,880	$1,685,540
1906	4,206,890	651,233	4,055,873	1,545,267
1905	3,899,170	649,265	3,783,658	1,547,167
1904	3,595,013	658,303	3,312,439	1,412,150
1903	3,415,046	552,209	3,200,994	1,212,246

Life-Insurance Distributions.

The *Insurance Press* has issued a report which shows that the life-insurance organizations of the United States and Canada distributed in 1906 the sum of $327,576,199, against $307,019,972 in 1905, the increase being 6.5 per cent. The foregoing figures are based on special reports from standard level-premium life-insurance companies and on returns from fraternal insurance orders and associations, and include the amounts paid to policyholders or other beneficiaries in the form of death claims, matured endowments or other benefits. The amounts paid by the regular companies in dividends to policy-holders, on surrendered policies, on claims in foreign countries and to annuitants are not included. Summarization of life-insurance payments of all kinds in 1906 would give the following:

Claims paid in United States, United States possessions and Canada	$327,576,199
Payments to foreign policy-holders, annuitants for dividends and for surrender values (estimated)	120,000,000
Grand total	447,576,199

In 1906 thirty-one regular companies reported over 343,000 lapsed policies for more than $526,800,000 of ordinary insurance. The amount of new ordinary insurance issued in 1906 by about 125 companies was $200,000,000 less than in 1905 and $320,000,000 less than in 1904.

CURRENT BUSINESS NEWS.

Commercial.

Europe's wheat crop will be short. Estimates vary from 120,000,000 to 200,000,000 bushels. Broomhall's latest mail estimates are 32,000,000 bushels for Germany, 48,000,000 for Roumania, 25,000,000 for Bulgaria and 48,000,000 for Hungary, or about 150,000,000 bushels. The Hungarian official makes the shortage 76,000,000 bushels. Russia was very short this season. Broomhall says it does not promise any material increase, but spring wheat, which was sown late, is its important crop.

The *American Miller* points out that for the past five crop years the average yield of wheat has been 660,000,000 bushels, of which 520,000,000 bushels have been consumed at home and 140,000,000 exported. During the past three years an average of only 91,000,000 bushels of wheat has been sent abroad, while consumption has averaged 541,000,000 bushels, or 21,000,000 above the five-year average. Clearly, in case of a shortage of 100,000,000 bushels in the crop of 1906-07, as now predicted for winter wheat alone, exports should cease.

The Kansas state report makes the June 1 condition of wheat 56, against 84 last month and 70 last year. The figures are taken to indicate an outturn of about 51,500,000 bushels, plus the spring-wheat crop, which may be 3,000,000 or 4,000,000 bushels.

The final official returns of the yield of this year's Indian wheat crop are as follows (in tons), with comparison:

	1906-07	1905-06	1904-05
Punjab	3,250,000	3,510,000	2,855,000
Northwest frontier provinces	300,000	280,000	268,000
United provinces of Agra and Oudh	2,125,000	2,129,000	1,897,000
Bengal and eastern Bengal	430,000	450,000	495,000
Central provinces and Berar	900,000	827,000	832,000
Bombay	200,000	271,000	357,000
Sindh	160,000	193,000	126,000
Central India and Rajputana	1,135,000	560,000	662,000
Other provinces and native states		40,000	90,000
Total	8,500,000	8,560,000	7,582,000

A St. Petersburg cable gives the following figures from the statistical committee of the Agricultural Ministry on the grain crops of 1906:

Winter wheat, bushels	237,776,000
Spring wheat, bushels	259,032,000
Corn, bushels	65,842,000
Oats, bushels	598,452,000
Rye, bushels	796,410,000
Barley, bushels	298,624,000

The Federal Department of Commerce and Labor estimates the per capita wheat consumption in the United States for 1907 at 7 bushels and revises the 1900 rate to read 7.08 bushels.

Alfred B. Shepperson, editor of *Cotton Facts*, and one of the best-known authorities on cotton, expressed the belief Tuesday that undue importance had been attached to the government's cotton report published a week ago, showing the condition at 70½, or the lowest on record for a quarter of a century. He said that as cotton had not been planted in some places, and was not out of the ground in others, cotton men who valued their reputations were not making estimates this early in the year. Last week's report, he said, was in some respects like the estimate of condition put out two years ago in November, or after the crop had been picked. He said: "All that can be truthfully said at this time is that the cotton crop, on the average, is three weeks late. Up to April 1 the season was earlier than usual, and as a consequence the soil was unusually well prepared. It is the weather from now on that makes the crop, and nothing has been lost that cannot be recovered under favorable conditions. A great deal can happen between now and August to improve or injure the crop. As a rule, cotton men think it is rash to make any estimates before August."

A Russian semi-official report for the period ending June 2 is as follows: "Winter wheat—The outlook is generally unsatisfactory, particularly in the northwest and southwest. Winter rye shows a good average condition. Spring grain—The outlook is fully satisfactory. The area under winter crops abandoned in the southwest has been replaced by spring wheat; elsewhere the abandoned area has been replaced by barley."

The weekly report of the government on weather in the crop country of the United States, issued Tuesday, contained the following: "On the Pacific coast and in the central and west gulf states temperature during the week was favorable, and beneficial temperature also prevailed during the latter part of the week in Tennessee and the east gulf states. Elsewhere the weather was abnormally cold, especially over the northern portion of the central valleys, and in the lake regions and Atlantic coast districts north of North Carolina. Late frost occurred in the western portion of the upper lake region and the lower lake region. Cloudy weather was prevalent generally throughout the central and northern districts of the Rocky mountains, but in the southern states there was abundant sunshine. Portions of the lower Missouri, central Mississippi and Ohio valleys experienced very heavy rains, which caused overflows that resulted in considerable damage. In the southern states the rainfall was very light, none having fallen over a large part of that section."

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—The weather has improved, but the indicated yield is rather below last year. France—The outlook for the crop is favorable, with offerings light. Germany—Crop prospects have improved. Foreign grain meets with a quick sale. Hungary—The outlook for the crops continues to show improvement, but estimates are very low as to the yield of wheat, some estimating as low as half a crop. Roumania—Further rains have fallen and the prospects for the spring crops have improved. Turkey—Beneficial rains have fallen, which have improved the crop outlook. Russia—The winter-wheat crop of the southwest is estimated at 50 per cent. In Poland the crop outlook is rather poor; elsewhere moderate to fair. In the southwest the spring crops have improved; elsewhere the outlook is satisfactory. Supplies are scarce. Italy—Official reports state that the outlook for the crops is favorable, while unofficial reports place the condition as moderate. Spain—The weather is very unsettled and the outlook for the crops is less favorable. India—Our Kurachee agent maintains his previous estimate of an exportable surplus of 29,600,000 bushels.

The *American Agriculturist* looks for a winter-wheat crop of 350,000,000 bushels and an oats crop of 850,000,000 bushels.

The Berlin *Tageblatt* says it learns that the Franco-Japanese treaty contains a clause guaranteeing the open door in China for all nations.

Postal receipts at the fifty largest post offices in the month of May aggregated $7,366,716, as compared with $6,640,748 in the corresponding month of 1906. This is an increase of more than $725,000. The New York post office led the procession with receipts of $1,582,838, against $1,430,580 in May a year ago.

Official statements from the Iowa crop service, issued Tuesday, place the Iowa crops from 17 to 18 per cent. behind their condition a year ago at this time. From oats, which are 7 per cent., to hay, which is 18 per cent. behind, the decrease is steady. The following summary is given: Area planted—Corn, 103 per cent.; wheat, 94; oats, 98; rye, 91; barley, 94; meadows, 95; flax, 97, and potatoes, 100. Condition—Corn, 88; wheat, 86; oats, 89; rye, 90; barley, 81; flax, 83; potatoes, 86; hay, 74; apples, 55; peaches, 27; plums, 42; cherries, 30; grapes, 80, and berries, 78 to 82. Condition last year—Corn, 99; wheat, 98; oats, 96; barley, 96; hay, 92, and potatoes, 101.

The official figures of the Indian linseed crop this season show an increase over last year's of 45,000 tons for pure and 22,000 tons for "mixed," the respective totals for this year being 310,000 and 110,000 tons, against 265,400 and 88,000 tons respectively for 1905-06. Although there is an increased yield, much of the seed has been damaged by rains, and Dornbusch estimates this season's exports will not exceed 300,000 tons, compared with 217,000 tons last season, 300,565 tons in 1905-06 and 570,536 tons in 1904-05. The yields of the various provinces are as under (in tons):

	1906-07	1905-06	1904-05
United prov's of Agra and Oudh	170,000	120,000	100,000
Bengal and eastern Bengal	110,000	128,000	114,000
Central provinces and Berar	100,000	77,000	80,000
Bombay	40,000	3,000	19,000
Hyderabad		25,000	34,000
Total	†420,000	353,000	347,000

† Pure, 310,000; mixed, 110,000.

The Michigan crop report places the condition of wheat on June 1 at 70, against 74 in May, and 75 June 1, 1906. Severe weather hurt the crop most. Eight per cent. was winter-killed and Hessian fly destroyed 3 per cent. The condition of corn is expressed by the figures 63, against 90 last year; that of oats is placed at 87, against 91 in 1906. Condition of 70 for wheat indicates a crop of 11,000,000 bushels.

The London *Economist* makes its index number of average prices of commodities June 1 at 2601, compared with 2549 May 1, and 2372 June 1, 1906.

The June report of the Iowa crop bureau estimates corn area planted at 103 per cent. and condition of crop 88, as compared with 99 per cent. last year. The area of oats planted is 98 per cent. and average condition 89, against 96 last year.

On Saturday last Secretary Coburn, of the Kansas Department of Agriculture, issued his report bearing especially on the state's winter-wheat situation. The canvass in great wheat-growing counties, he states, was particularly thorough. His report says: "It now seems evident that of the state's total area sown to winter wheat last fall about 21 per cent., or 1,410,000 acres, has been plowed up or is worthless, as against the 4 or 5 per cent. reported by the same correspondents April 24. The condition June 4 on the 5,305,000 acres which now seems likely to be harvested averages for the state 56.7, or 27.3 points less than the general average of the growing winter wheat (about 6,300,000 acres net) six weeks ago. The causes of the increased areas plowed up and decrease in condition are throughout chiefly ascribed to the frequently recurring, if not continuous, low temperatures, and general lack of timely and sufficient May rainfall. The most notable damage of all, however, appears to have been done by the widespread freeze occurring in the last week of May. The information was often volunteered that the green bugs had entirely disappeared. While more or less damage was done by green lice in the southern central counties—and in some of them it was serious—the green-bug scare of 1907, one of a type annually exploited with Kansas as its stage, is a closed incident."

Recent reports of our trade with the Philippine Islands are encouraging. The returns for the first nine months of the current fiscal year indicate total sales for the full year amounting to approximately $9 000,000, or about 50 per cent. above those of any earlier year. Two years ago our sales to the islands reached $6,200,000. Last year they dropped to $5,460,000. The notion is probably general that while some of the merchandise sent to the islands comes from the east, the traffic is largely a Pacific coast business. This is not at all the case. About 70 per cent. of the sales for the first nine months of the current fiscal year were entered for shipment in the customs district of New York. During that term the entries in the Pudget sound district were valued at $900,000, in the San Francisco district at $920,000, and in the district of New York at $4,800,000.

The Department of Commerce and Labor Bureau of Statistics has issued the statement of the exports of domestic products for May. It is as follows:

May—	1907	*Changes*
Breadstuffs	$16,919,889	Inc. $6,314,889
Meat and dairy products	15,289,314	Inc. 289,822
Cattle, hogs and sheep	3,367,115	Dec. 398,727
Cotton	19,815,442	Inc. 3,284,417
Mineral oils	5,673,784	Dec. 516,879
Total	61,062,544	Inc. 8,943,542
From July 1 to May 31—		
Breadstuffs	162,824,586	Dec. 7,128,967
Meat and dairy products	165,895,839	Dec. 9,795,418
Cattle, hogs and sheep	31,294,012	Dec. 6,150,083
Cotton	486,902,047	Inc. 86,739,431
Mineral oils	71,750,344	Dec. 1,837,864
Total	900,756,828	Inc. 61,786,190

Financial.

It is reported that European financiers are preparing to provide Russia with $50,000,000. According to the report, the United States is to give $12,000,000 of the sum named. The money, it is said, is to be devoted for domestic needs, improving internal affairs and developing the industrial and commercial resources of the country. It is said that the Berlin firm of Bleichroeder are the chief factors in arranging the new loan.

President Budd, of the New York Consolidated Exchange, in the annual report, points out the business of the exchange has shown very little falling off during the past year; stock clearances amounted to 131,391,440 shares, which compares with 133,101,100 last year and 145,439,570 the year before. When the new building is completed a saving of $40,000 will be effected yearly. Fifty-seven new members have been admitted during the fiscal year, and ninety-eight memberships have been purchased and canceled, resulting in extinguishment of the gratuity obligations to the amount of $541,625. The surplus of the gratuity fund at the close of the year was $409,953, while the balance to the credit of the general fund amounts to $97,112. It compares with $105,223 for last year.

Directors of the United Railways Investment Company, it was announced Thursday, have determined to take no action with respect to the semi-annual dividend on the preferred stock, payable in July. This step has been taken in view of the existing strike situation in San Francisco. The dividend has been at the rate of 2½ per cent. semi-annually, the last two payments having been made in scrip, because of the losses incurred in the earthquake more than a year ago.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

Thursday's trading, 189,491 shares, on the Stock Exchange was the lightest in exactly two years. The last occasion on which a smaller total than that of Thursday was recorded for a full day's business was on June 15, 1905, when 130,300 shares changed hands. On April 18, the previous low day of this year, 312,000 shares were sold, which compares with 302,500 on July 10 last year, which was the low of 1900.

The *Journal of Commerce* gives the following table of the year's flotations of stocks, bonds and notes for the current year, along with comparative statistics for the corresponding period of 1906:

	Stocks, 1907	*Bonds and notes,* 1907
January	$143,512,400	$185,500,000
February	19,000,000	113,760,000
March	202,322,500	24,550,000
April	63,608,000	112,954,000
May	49,200,000	192,332,000
Total	477,642,900	*$629,096,000
	1906	1906
January	$23,210,000	$08,904,000
February	36,110,854	241,296,000
March	131,808,100	41,400,000
April	48,250,000	133,881,000
May	49,955,250	77,555,000
Total	289,334,214	503,036,000
Grand total this year		$1,106,738,900
Grand total year ago		882,370,214
Increase		224,368,685

*Notes responsible for $488,751,000.

The Spanish budget committee has reported favorably the bill read in the Chamber of Deputies by the Minister of Finance, Señor Osna y Soull, providing for the payment of the loan raised by Spain in the United States in 1834.

State Superintendent of Banks Keep has approved the proposed merger of the Equitable and Mercantile Trust companies of New York city. The new company will be known as the Mercantile Trust Company. It will have a capital of $3,000,000.

Railroads.

The shipments of anthracite coal over the various roads for May and since January 1 compare as follows with the like periods in 1906:

	May, 1907	*May,* 1906	*From January 1,* 1907	1906
Reading	1,249,133	604,422	5,451,044	3,959,924
Lehigh Valley	963,552	478,158	4,561,318	3,327,306
Jersey Central	818,256	397,050	3,503,635	2,461,284
Del., Lack & W.	924,693	615,033	4,303,237	3,375,058
Del. & Hudson	503,109	368,070	2,664,918	2,039,950
Pennsylvania	565,668	286,026	2,498,216	1,725,523
Erie	644,737	355,381	2,859,568	1,966,082
N. Y., Ont. & W.	235,139	149,653	1,128,375	854,656
Total	5,994,272	3,254,230	26,962,325	19,769,785

The Colorado & Northwestern Railroad Company has been placed in the hands of a receiver, as the road defaulted on the interest on its $1,000,000 5 per cent. mortgage bonds. The company owns a road from Boulder to Ward, Col., a distance of twenty-six miles, and from Sunset to Eldora, twenty miles, and has trackage rights from Boulder into Denver over the Colorado Southern. Its capital stock is $1,000,000.

Industrial.

According to the *Iron Age*, "production of pig iron in May footed up to 2,294,005 tons, as compared with 2,219,242 tons in April. The daily rate was therefore nearly identical—73,975 tons in April and 74,001 tons in May, although the capacity at work on May 1 was considerably larger than it was on April 1. During May, too, a number of additional stacks had started, so that June output should show some increase. The steel companies made in April 1,446,788 tons, or at the rate of 48,226 tons per day, and in May produced 1,470,080 tons, or only 47,422 tons per day. The merchant furnaces therefore turned out 830 tons per day more in May than in April."

The center of the manufacturing enterprise in Canada, toward which much American capital is moving, is Montreal. Last year the product of these workshops amounted to $100,000,000, compared with $71,000,000 five years ago. Toronto last year produced $85,000,000 worth, compared with $58,000,000 five years earlier. The manufacturing returns of Canada for the last fifteen years have been as follows:

1891	$368,696,722
1901	481,053,375
1906	712,664,835

The longshoremen's strike in New York City and vicinity has been declared off.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Weather, crop and retail trade conditions over a wide area of country have changed for the better this week, and the feeling is rather more optimistic than for some months past. In the northwest, parts of the central west and in some sections of the south higher temperatures have encouraged freer buying of summer goods and made for more cheerful advices as to the wheat and cotton crops. Still the crops are very backward, it is too cool for the best growth of corn, and exceptionally favorable conditions are required for best future results to the agricultural community. In the eastern half of the country the warmer weather west and south has not yet appeared, but is anxiously expected. Agreement is general that retailers' stocks the country over are large, that reduction sales are numerous, and that filling-in orders from jobbers and manufacturers are a negligible quantity as yet. It is noted that fall trade reports are good in most sections, in a few being in advance of a year ago, but there are, coincidently, a few reports of cancellations of business booked, mainly in the southwest, of requests for the withholding of shipments, and for extensions on payments on past business. Cotton goods lead the dry-goods line in strength of prices, a reflection of fears of crop damage affecting future production. Bettter crop reports have depressed prices of cereals and other farm products, but cotton follows this tendency at a distance. The June 1 level of all prices showed an upward reaction from earlier months of easing quotations which the present weakness has not altogether offset. Reports from the leading industries partake of the prevailing irregularity. Finished iron and steel are active, structural material leading, while pig iron is quiet. In lumber, interior buying at large western centers is less active, and Oregon logging camps have shut down to avert lower prices. Some southern markets report declining prices for lumber, a reflection, apparently, of weather or other conditions affecting building. Inability to easily obtain money is the cause assigned for difficulties reported by building concerns who were spread out too widely for the capital employed. Money markets as a whole show little change. There is a disposition to hardening on long-time loans, while call rates are easy. Gold shipments have ceased for the time being, an impelling force being the call for the return of national deposits with banks made some time ago. The wire edge is off speculation in commodities, and stock-market operations have sunk to the smallest total in two years. Railway earnings for May exceed those of May, 1906, by 15.1 per cent.

Good "Scotch weather," that is, cool and wet, helps spring wheat and oats in the northwest, while slightly warmer weather helps winter wheat to grow in Kansas, Nebraska, Indiana and Missouri. In the northwest spring wheat looks better than for years and is growing finely. It is, however, hardly warm enough in the corn belt. That plant grows slowly and does not look especially good, being two to three weeks late. Iowa conditions in corn are not equal to last year, but the acreage is larger, and this report of increased planting of corn comes from a wide area, indicating that backward condition is to a certain extent offset by larger acreage. Meadows in the west look better, but they are not up to last year. Hay is high, and it is costing much more to feed cattle. Wheat harvesting has begun in Oklahoma two weeks late. Tennessee wheat has gained considerably in condition. Western tomato crops do not look well. Tobacco crop reports are not favorable. Plants are scarce in the Richmond district, and if present weather continues the crop will be a light one. Maryland tobacco prospects are not favorable.

Warmer temperatures have helped cotton materially, and feeling at the south is much more optimistic. The crop, however, is very late; much replanting will be and has been necessary, and perfect weather is needed to make a normal crop. Seed for replanting has sold as high as $100 per ton. The plant's life practically dates from June 1, and cold weather must hold off if good results are to be secured. Ideal weather is reported in the lower Mississippi region; things are better in Texas and Arkansas. Sunshine in Georgia has made for progress, but the plant is very late. The Alabama crop promises at present to be short.

Pig iron markets are quiet, and promise to remain so for a time, as furnaces are sold up, while the larger consumers are quite well covered. Prices are steady at most points, though quotations for spot are reported to be somewhat lower in the Pittsburgh district. Production is proceeding at a rapid rate, the output for May being in excess of 2,290,000 tons, a new high record. Bessemer billets are easier on better supply. New business in steel rails, structural material, rods for reënforced concrete and steel cars is good. The leading interest has booked a contract for 14,000 tons of steel rails for Peru. There are reports in the structural-material line that competing interests are figuring closely on contracts. Renewed activity in shipbuilding on the lakes is looked for, which favors an increased demand for plates. All the lighter lines are brisk. Coke continues very weak, production being heavy and the railroad service good. Lake copper remains steady at last week's prices, but electrolytic is somewhat lower. Business is quiet. European melters' stocks are said to be light.

A government report construed as bearish was taken advantage of by powerful sold-out bulls in wheat to break prices of that cereal, sharply aided, as they were, by rather better crop advices both at home and abroad and bearish visible supply statistics. Prices of July delivery broke 5 to 6 cents from Friday to Thursday, and the July option at New York showed at one time a drop of nearly 10 cents from the high point reached in late May, while Chicago July similarly showed a drop of 9 cents. On Thursday liquidation of weak bulls appeared to be about completed, and on covering of short sales a gain of 1 to 1½ cents was shown here and at Chicago. On Friday renewed weakness was shown on good crop reports, and prices fell slightly below Thursday's lowest, and the lowest prices of the month were reached. Corn sympathized with the weakness in wheat, but within narrower limits, owing to reports of heavy rains delaying farming operations, and the decline for the week was only 2 cents. Oats were very weak, largely on the government report, dropping 2½ cents on the week and 7 cents from the high point on June 1. Hog products were weak, pork losing 25 cents and lard 30 points on large receipts of hogs and free selling by packers. Cotton-seed oil advanced 1 cent to the highest price in years—62 cents—but lost it and another cent besides later. Butter, cheese and eggs have all weakened on larger receipts.

The June 1 government report was rather more bearish than the various state reports, some of which, in the past at least, have not erred on the side of small yields. Thus the Kansas June report puts winter-wheat condition at 56, against 60 by the government, and reports 21 per cent. of the crop plowed up, whereas the government has not made any further deduction from the 4.8 per cent. decrease in acreage reported on May 1. On the face of the government returns a total wheat crop of 635,000,000 bushels is figured—379,000,000 bushels of winter and 256,000,000 bushels of spring wheat—a total decrease of 100,000,000 bushels from a year ago. It also points to a close-to record yield of oats, a thing certainly not expected this year in view of the bad reports received.

A slight turn upward in BRADSTREET'S price index number in May is a reflection largely of poor crop reports affecting prices of farm products. The index number on June 1 was $8.9101, a gain of six-tenths of 1 per cent. over May 1, but a decrease of 1.4 per cent from the high record level of March 1. Compared with a year ago on June 1 the index number shows a gain of 7.8 per cent., while compared with February 1, 1900, a period of high prices in the earlier years of the present prosperity, the advance is 8.2 per cent. Compared with the low level set on July 1, 1896, the advance is 56 per cent. Breadstuffs, live stock, textiles (mostly cotton and cotton goods), hides and leather, oils, chemicals and miscellaneous products showed gains, while provisions (mostly dairy and hog products), building materials, fruits, metals and naval stores declined.

Higher temperatures, liquidation on the late advance, and reports as to less satisfactory trade in dry goods were effective in causing a decline of 30 to 35 points on the next crop, of 10 points on spots, and of 5 to 10 points on the bulk of the old crop months.

Extreme dullness prevails in the securities market. While sentiment tended to improve on more favorable crop reports, as well as on Governor Hughes's veto of the 2-cent fare bill and the abandonment of the threatened prosecution of the Union Pacific financiers by the government, bearish influences were furnished by the commencement of suit against the anthracite combination, and by the hardening of money rates, consequent on the Treasury's call for the return of $30,000,000 of government deposits by the banks. Higher money, however, delayed gold exports, although exchange continues very strong, demand sterling ruling at or a little above 4.87, and $2,000,000 gold was engaged for Paris on Friday.

Bank clearings for the week ending June 13 aggregate $2,610,614,000, 14 per cent. below last week and 1.7 per cent. under this week last year. Outside of New York exchanges amount to $1,123,172,000, 7 per cent. less than last week, but 13.5 per cent. over the week last year.

Business failures for the week ending June 13 number 161, against 155 last week, 170 in the like week of 1906, 175 in 1905, 181 in 1904 and 165 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending June 13 aggregated 3,376,962 bushels, against 5,263,138 bushels last week, 2,329,242 bushels this week last year, 688,017 bushels in 1905 and 3,400,314 bushels in 1902. For the past fifty weeks of the fiscal year the exports are 164,321,860 bushels, against 130,956,355 bushels in 1905-06, 60,700,267 bushels in 1904-05 and 242,688,760 bushels in 1901-02. Corn exports for the week are 783,455 bushels, against 1,135,065 bushels last week, 320,486 bushels a year ago and 505,099 bushels in 1905. For the fiscal year to date the exports are 69,531,481 bushels, against 103,827,326 bushels in 1905-06 and 76,492,310 bushels in 1904-05.

IN CANADA.

Slightly warmer weather and more optimistic crop reports caused thereby have helped trade in all lines, but there is still much room for improvement, especially in retail lines, in eastern Canada. Western reports are relatively best as to this feature. Reorder trade is not much of a factor, but fall business is being placed with great confidence. Building is active throughout Canada, and the hardware trade is the most active of all lines, with groceries next, and light summer dry goods least favorably situated. Better reports coming from the spring-wheat crop help trade. There is said to be a smaller decrease than expected in the total area, condition is good, and the outlook favors a yield equal to last year if good weather supervenes. Montreal reports heavy imports taxing the port's facilities, but lighter exports, mostly of agricultural products. Toronto reports special activity in the demand from the new Ontario mining district. Trade is more active in the wheat districts of the northwest and in British Columbia. The Asiatic demand for Canadian flour is increasing. Failures for the week number 22, as against 18 last week and 20 in this week a year ago. Clearings aggregate $84,665,000, a decrease of 5 per cent. from last week, but a gain of 10 per cent. over this week a year ago.

BETTER CROP REPORTS.

FEELING AS TO WHEAT MORE OPTIMISTIC, PARTICULARLY IN THE NORTHWEST. GOOD "SCOTCH WEATHER" FOR SPRING WHEAT AND OATS THERE. WARMER TEMPERATURES MAKE FOR GROWTH IN WINTER-WHEAT BELT, BUT STILL TOO COOL AND WET FOR CORN, WHICH IS BACKWARD, THOUGH WITH A LARGER ACREAGE. TIMELY RAINS HAVE HELPED CROPS IN THE PACIFIC NORTHWEST. MEADOWS LOOK BETTER. TOBACCO BACKWARD. PLANTS SCARCE. PEANUTS A SMALL CROP. FLORIDA CROPS ARE ALL SHORT OWING TO DROUGHT EARLY IN YEAR. WARMER WEATHER HELPS COTTON. FEELING MORE OPTIMISTIC, BUT CROP LATE, SMALL AND WEEDY. PERFECT WEATHER NEEDED TO MAKE NORMAL CROP.

CHICAGO.—The promise for the wheat crop is between 615,000,000 and 630,000,000 bushels. This may be cut down by damage to spring wheat. The supply of sunshine in the agricultural regions has been better this week, but not entirely adequate to make for rapid plant growth. It is called good Scotch weather for oats—cool and wet—and has also improved winter wheat in all sections and given spring wheat a good start, but the crop is late and needs the best of weather to bring it to a normal condition. Reports on corn are unfavorable, the crop being backward, owing to too much rain and lack of warmth. The condition in Iowa is 88, compared with 99 last year, but the acreage is 3 per cent. larger than a year ago. Meadows have improved, and prospects for fruit in some sections are less unfavorable. Cotton is making slow growth, but there is a large acreage. Wheat harvesting is in progress in Oklahoma, but is fully two weeks late, and the movement of the new crop will be three weeks behind the average.

CINCINNATI.—While rain, frost and cool weather have somewhat discouraged farmers, wheat and timothy look fairly good. Considerable corn has been planted though it does not seem to grow, but that which has got up looks good. Oats are fair. Fruit will be scarce.

INDIANAPOLIS.—Crop conditions continue to improve slightly, though corn is still a little backward. Oats are in good condition.

TERRE HAUTE.—Much complaint is heard from farmers, heavy rains and unfavorable weather having retarded corn planting, which in some sections may be given up. The wheat acreage promises to be exceptionally heavy, some of which is now ripening. The tomato crop, it is feared, will be backward.

ST. PAUL.—Crop reports from all parts of North Dakota and Minnesota are highly favorable. Grain and grass crops of all kinds are well rooted and are growing rapidly. An abundance of rain has fallen and warm weather has set in. The wheat crop looks healthier and stronger than it has for years.

MINNEAPOLIS.—Copious rains the past few days and the present warmer temperature are having a very helpful effect on agricultural conditions throughout the northwest. Grains are progressing finely and corn is doing well. The government report on acreage is regarded as conservative and helps to strengthen the already favorable outlook.

MILWAUKEE.—Crops are backward.

DAVENPORT.—Weather conditions have been more favorable to growing crops. The relative condition of crops is about 10 per cent. less than

at this time last year. Corn, which is small and not normal in color, needs plenty of sunshine.

SIOUX CITY.—Small grain looks well. Some corn will have to be replanted. Hot weather is needed.

SIOUX FALLS.—Cool nights and excessive rains retard crops. Wheat looks well. Oats not so good, and the crop is fully a month late. Corn planting is in progress, but in some sections requires replanting. Seasonable weather is very much needed.

DES MOINES.—General crop conditions would indicate a very considerable curtailment of yield in corn and all small grains. Corn shows a very irregular stand, and replanting is more than usual

ST. LOUIS.—The general crop situation is more favorable than at any time this season. Opinion is general that the acreage of corn will be in excess of last year's, but that cereal is some three to four weeks late.

ST. JOSEPH. — The condition of wheat is much improved. Authorities look for 70 to 80 per cent. of a full crop.

KANSAS CITY.—Kansas has had good rains and the condition of wheat is more favorable. The weather during the past week helped growing corn.

WICHITA.—We have had fine rains, but wheat will not make more than half a crop.

OMAHA.—General rains over the whole state have greatly benefited small grains. Warmer weather has helped corn very materially.

MEMPHIS.—Corn and cotton, although backward, are progressing, and fair crops are anticipated. A more hopeful feeling is apparent.

NASHVILLE.—Crops are late but are doing well, and Tennessee wheat will show nearer the average of 1906 at June 1, of 82.7 per cent., than the 1907 average of 74.4 per cent., as shown in the government report of the 10th inst.

BALTIMORE.—Prospects for the new crop of Maryland tobacco are not encouraging.

RICHMOND.—Tobacco plants are scarce, and with continued weather conditions the crop this year will be light. Prospects for the peanut crop are not good; the stand is not good and considerable replanting has been necessary. The cotton crop in most sections of North Carolina is late.

CHARLESTON.—Cotton is several weeks late, but has improved somewhat, the weather being warmer. The bean crop, which is three weeks late, is being shipped in large quantities at good prices.

JACKSONVILLE.—Owing to spring drought all crops are short.

ATLANTA.—The weather has been hot in the daytime and has been of some help to cotton, but cool nights have retarded growth. The crop is about three weeks late, and present indications are that the average decrease in yield will be about 33⅓ per cent.

AUGUSTA.—The condition of cotton is very favorable in some sections, while in others considerable grass is found. The weather is more favorable for growth.

BIRMINGHAM.—Farm work is backward.

MACON. — Crop conditions have improved, owing to rain and sunshine.

MOBILE.—Present favorable weather conditions are very beneficial to the farmer, but the cotton crop will be an exceedingly short one, owing to cold and wet weather, which lasted until about three weeks ago.

MONTGOMERY.—Cotton shows some improvement, though the plant still looks badly and hot sunshine is needed. The outlook at present is not encouraging.

LITTLE ROCK.—The weather during past two weeks has been quite favorable to growing crops, and the outlook is more encouraging.

NEW ORLEANS.—Ideal weather throughout this section the past two weeks has exerted a stimulating influence on the cotton situation. Farmers are now hopeful of a larger yield than was expected, and the crop is being rapidly worked into rather good condition. There is a good-sized acreage of both rice and sugar cane, and these crops are doing well.

DALLAS. — Corn is in fair condition, but the outlook for a cotton crop in this district is far from good. Cotton that is up is small and weedy, and it will be necessary to replant a considerable portion. It will require almost perfect weather conditions and strenuous work to make even a fairly normal crop.

FORT WORTH. — Improvement in weather conditions in northern Texas causes a better feeling, though much damage has been done by rain and cool weather. Cotton will be late. The plant does not look well and a great deal of replanting has been done.

WACO.—The weather continues very favorable to cotton and corn. Labor is very scarce at good wages.

PORTLAND, ORE. — Much needed rain has benefited growing crops.

SPOKANE.—Recent rains have improved the crop outlook.

TACOMA.—Timely rains have improved crops.

TRADE REPORTS.

At New York the wholesale dry-goods business has been of fair volume in a number of departments, and prices are firm. Where sales have fallen off, unfavorable weather is held to be the cause. Collections have been good in most instances, but in some quarters are a little backward. Yarns of all kinds—woolen, worsted and cotton—continue scarce and dear, and some of the higher grades are unobtainable at almost any price. Spinners have orders which they are unable to fill, and will not be able to fill for some time to come. Raw silk continues dull, though prices for the past two weeks are slightly in favor of buyers. There has been some improvement in the cloak and suit trades; collections are better and orders are increasing. In the retail branches in these lines business has been more brisk, and shirt waists also are more inquired for. The late season has caused reductions in prices of millinery, and manufacturers of women's hats have had a poor season. Stocks of men's hats have accumulated, and business in this line so far has been poor. The activity hitherto reported in men's furnishings continues, and prominent firms are still busy on shirts, gloves and neckwear, sales in some instances being in excess of last year. Similar satisfactory conditions are reported in hosiery and knit goods, and sales have been so large that the cutting down of some orders is found necessary. Wholesale grocers say business is very dull and out-of-town orders limited. Retail trade, however, is active and believed to be in a prosperous condition. Butter declined 1 cent on large receipts. Exports of cheese have been light. Supplies of eggs largely exceed demand, and even the quantities stored do not prevent a fractional fall in price. Prices of cattle and dressed meats have further advanced. Receivers of flour say wheat fluctuations are tiring wholesale dealers, who are only able to sell jobbers on upturns on wheat, forcing jobbers to cut rates occasionally in order to realize. Manufacturers of gas fixtures report orders scarce. The same conditions obtain in the hardware trade, and collections are slow. Pig iron is quiet, but prices are well maintained. Structural steel is in active demand. Pig tin is scarce and copper is less inquired for. Machinery dealers report fewer orders. There has been a marked falling off in the importation of automobiles, but dealers report sales not much less. Cotton cordage is scarce and dear and the demand exceeds the supply. Trade in anthracite coal is good for the season, and the soft-coal trade is satisfactory. There is not much doing in tobacco at wholesale, but cigar manufacturers say business has improved and factories are now working full time. Conditions in the hide and leather trade are unsatisfactory, and the goatskin and glazed-kid lines are much depressed. Prices of crude rubber continue to fall. Furniture dealers are fairly active, but care is used in credits; collections are more or less slow. Paper at wholesale is in fair demand, though in some lines there has been a falling off in orders. In all lines there is difficulty in getting supplies from the mills, and manufacturers are behind in their deliveries; collections are fair to good. Russian bristles are in excellent demand and prices have an upward tendency. The real-estate market was fairly active and business generally satisfactory, notably in the Harlem section of the city, where large sales of vacant lots and unimproved property are reported. Conditions in the lumber and building-material trades are anything but good, and have been the means of putting one firm into bankruptcy and forcing another to calling a meeting of its creditors.

The following telegrams show trade conditions at the cities mentioned for the week ending June 14:

BOSTON.—The prolonged depression in the retail dry-goods business adversely affects the jobbing trade, and sales and collections are both disappointing. Stocks of spring and summer dry goods and wearing apparel in retailers' hands are unusually heavy for the season, and manufacturers of garments, in some instances, have had accumulated stocks to sell at sacrifices. Warm weather this week has stimulated retail trade to some extent and has encouraged hope of material reductions in stocks. Cotton goods at first hands are very strong, no stocks are on hand, mills are sold up for months to come, and advances are made on lines on which prices were already at a very high level. High prices are causing a halt in buying by jobbers on forward contracts, and retail trade is estimated to have been materially affected by prices as well as by inclement weather. Leather is quiet, particularly glazed kid, the cut in prices two weeks ago having upset the market. Shoe manufacturers have given up hope of reorders on summer goods and anticipate that jobbers will hold back fall orders until the latest possible date. Shipments continue to fall behind those of last year. A firm tone prevails in paper; jobbers report a less active demand, but no more so than is usual at this season. There are rumors of proposed advances on manilas, fibers, tissues and box boards. In automobiles and supplies there is a considerable falling off in business. Trade in furniture shows no improvement and collections continue slow. Northeastern and southern lumber is very quiet, but stocks in some lines are low and better buying is expected in the near future. Western lumber and hardwood continue firm. Building materials, such as lime, cement and bricks, are fairly active. Iron and metals show no material change, but some big contracts for structural steel have been placed lately. Paints and oils are steady. Coal continues very active in the anthracite line, orders having been heavy for the time of year. The tardiness of retail provision dealers on payments is an unfavorable factor. The produce trade continues unsatisfactory on account of continued cold weather. Wholesale liquor dealers report a good trade during the past week, owing partly to continued cold weather. Brewers are fairly busy but need warm weather.

PROVIDENCE.—Collections in the jewelry trade are very slow. Business along this line is good, with quite a little improvement noticed during the week. In coal, business has held up longer than usual owing to the cold spring weather, which has had a detrimental effect on general business, and retailers in many lines have been unable to move their stocks. Breweries report a quiet trade. The cotton goods market is strong at advanced prices.

PORTLAND, ME.—Warm weather the past few days has stimulated trade in nearly all lines. Wholesale groceries, provisions, women's and men's wear, millinery and fancy goods show good increases, and collections are good.

PHILADELPHIA.—Dry-goods and notion jobbers feel the effect of the unseasonable weather, retailers, with the possible exception of some of the larger stores, reporting a poor spring business, and collections are, as a result, draggy and uncertain. Desirable wools are scarce, the new clip is coming in slowly and trading is comparatively light. Flour is slow and unsatisfactory, millers holding prices firmly, while jobbers and consumers are demanding concessions. Chemicals and dyestuffs are in good demand, except those required in textiles, and prices are strong. Material advances are reported in soap materials. Collections are rather poor. Paints and glass are fairly active and the market rules steady. Lumbermen report slightly improved conditions, retailers especially noting a better demand. Prices continue firm and collections fairly prompt. Hides and skins are in fair demand, with good supplies of improved quality skins and firmer prices. Goatskins are still weak, with no improvement in demand and weaker prices. Leather is unchanged, with spasmodic business, good supply and no appreciable decline in price. Wholesale and retail shoe dealers report business below normal owing to backward state of season, with tan goods predominating. Tobacco inquiries are numerous, but buyers are unwilling to pay prices asked. The prospect of a small, poor crop for 1907 has had the effect of stiffening prices again through Pennsylvania. Collections are slow. Liquor withdrawals from bond are heavy, though wholesalers find sales of straight rye light; blends, for which withdrawals are largely intended, are in more active demand. Prices are steady. Iron buying is not so active for late deliveries, but for immediate requirements demand is steady, and mills being supplied with orders, prices continue firm. Anthracite coal is fair, but bituminous business is falling off somewhat, though filling orders under contracts occupy dealers.

PITTSBURGH.—The pig-iron market continues very quiet, no sales being reported, and the inquiry is quite light. The furnaces are well sold up, and iron for spot delivery commands a premium. Leading interests report a continuation of the conditions which have prevailed with the finishing mills for some time past, there being but little diminution in the orders for new business and an urgent demand for delivery on back orders. Coke is still in full supply and weak, with no change in prices. Spot quotations for pig iron at the valley furnaces are nominally as follows: Standard Bessemer, $24; chilled basic, $24; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2, and foundry coke, $3 to $3.25.

BUFFALO.—Trade at retail remains quiet, which is attributed to unseasonable weather, and collections are slow. The produce market is not very active, while the live-stock market is slow and prices lower.

BALTIMORE. — Continued unsettled and cool weather is the dominant factor in trade. Especially is this noticeable locally, where stocks of summer apparel are comparatively unbroken, and it is questionable if lost business would be regained should favorable weather now set in. It is believed considerable stocks will have to be carried over to next season, in view of the liberal buying in the early part of the year in anticipation of rising prices. Jobbers feel the effect through retailers asking more time. Some of those who usually discount, and in some instances anticipate, are allowing bills to reach maturity. Similar conditions exist with out-of-town trade, where noticeable conservatism has developed in placing fall orders, and some cancellations are reported. Fall business, however, holds up fairly well. Immediate business is extremely light. The wholesale dry-goods and notions market is firm, with a scarcity reported in nearly all cotton goods, despite advanced prices. Reports as to weather conditions in the cotton belt are not conducive to speculation. Clothing manufacturers report fair-sized orders from salesmen on the road, but there is apparent an inclination to delay large orders, pending more settled weather conditions. Receipts of Maryland leaf tobacco are liberal, with prices unchanged. Lumber is quiet, with good grades steady at firm prices; stocks are full. Hardwoods are in fair demand at steady prices. Drugs are fairly active. Weather conditions retard milling operations, and material dealers report a falling off in sales. Money is tight at 6 per cent., with demand exceeding supply.

CINCINNATI.—Unseasonable weather continues and trade in general has suffered. Jobbers handling dry goods and women's garments have felt the effects. Department stores are experiencing a very unsatisfactory spring trade owing to unsettled weather conditions, and stocks are large. In iron and machinery lines collections are slow and trade is medium. Fall orders for staples, while considered satisfactory in view of existing conditions, are below last year's.

CHICAGO.—A slowing up in general trade is noticeable, but the volume is still large. Unfavorable weather and uncertain crop prospects are the chief causes of the change. Retail business has been materially affected by lack of warm, seasonable June weather. Fall business is progressing satisfactorily in most instances and is ahead of last year's. The advance in cotton and poor prospects for the crop have stimulated buying of cotton goods. Iron and steel interests show no reduction in activity in purchases or output of mills. Structural material and steel rails are the leaders; one road bought 40,000 tons of rails and 9,000 tons of structural material. The wire and nail mills are crowded with orders and are making good profits. The increased use of reënforced concrete work in the construction of buildings has created an

enormous demand for special grades of wire netting. Business in pig iron remains light, but prices are firm. Receipts of anthracite coal are smaller than last year. Bituminous is having a fair sale. Sales of lumber to the interior are lighter, but local consumption remains heavy and there is no shading of prices. Other lines of trade are quiet. Butter is higher. Eggs are in moderate demand. Hogs are at the lowest price in nine months, selling below $6. Cattle, sheep and lambs are lower. Receipts of all live stock increased. Money is easy. Deposits hold well. The supply of commercial paper is good.

PEORIA.—Unfavorable weather affects all lines of business, more particularly clothing and dry goods. Trade is reported very quiet and collections slow. With summer weather there is no reason why stocks should not move quickly, although as the season is well advanced, this will necessitate reduction sales or the carrying over of a large amount to next year.

INDIANAPOLIS.—Wholesale trade is good, but retail is only fair.

TERRE HAUTE.—General trade conditions have not materially improved, though they are considered a little in advance of a standstill.

LOUISVILLE.—Business is fair in all lines. Whiskey dealers and distillers have completed a very large and successful season. Kentucky whiskey has increased in demand and price during the present year. Bad weather has retarded retail trade locally, but goods have moved better during the past week. Hardware jobbers report business good. Collections are slow.

ST. LOUIS.—Retail dealers feel that unless more seasonable weather arrives shortly they will be compelled to close out their stocks at reduced prices. Manufacturers and jobbers of all kinds of merchandise report very few filling-in orders. Future orders are in good supply, but some cancellations are being received. Manufacturers of cement and other building material report business less active than at any time for some weeks. Railroad traffic is slightly diminished.

KANSAS CITY.—More favorable weather has had a marked effect on trade in all lines. Jobbers in dry goods and kindred branches report a steady increase in sales for future delivery. The increase in dry-goods sales is attributed largely to the report that prices will advance. Retail trade in summer goods has improved. Collections continue somewhat backward, and in some cases extensions are being asked.

MILWAUKEE.—The tardy condition of crops has some depressing effect on jobbing and retail trade. Collections are a little slow.

SIOUX CITY.—Wholesale trade has improved, and collections are fair.

DAVENPORT.—Retail trade is not equal to that of the corresponding week last year, but the difference is not now so great as it was in the past few weeks. Collections are still slow.

ST. PAUL.—Trade is progressing steadily in all lines and is in excess of last year. Collections are coming in nicely of late, and with most houses they compare favorably with those of last year, although a few find the percentage, compared with the volume outstanding, a little behind.

MINNEAPOLIS.—More seasonable weather is helping trade. Jobbers and retailers in all lines report an increased volume. Collections are improving. Flour is still quiet with no indications of improvement.

OMAHA.—Seasonable weather has greatly stimulated general trade. On account of the backward season retailers are carrying exceptionally heavy stocks, and reduction sales are numerous. Collections are slow.

LINCOLN.—Trade is improving. Collections are fair.

SIOUX FALLS.—Trade is quiet. Dry goods and kindred lines are badly affected by unseasonable weather. Collections are slow to fair.

CHARLESTON.—Wholesale trade shows a little improvement. Retail trade is seasonable. Collections continue slow.

RICHMOND.—Wholesale dealers in and jobbers of shoes continue active. In some localities sales show a falling off, but on the whole business shows an increase. Wholesale dealers in dry goods had a good season in first orders, but reordering has been very light, due to unseasonable weather. Stocks in the hands of retailers in practically every line are larger than usual at this season. The crop of tobacco of 1906 has practically all been marketed at high prices. Continued unseasonable weather depresses retail trade and has resulted in backward collections in practically every distributing and manufacturing line.

SAVANNAH.—The cotton crop in this section is in excellent condition, but from three weeks to one month late. Farmers have rapidly caught up with cultivation, and the stands are good with few exceptions, owing to favorable weather conditions. The outlook for sea island, grown on the mainland and known as Georgias, is in a more critical condition than the upland, which is subject to more ills and is less heavy. The stock of cotton on hand at Savannah is 2,500 bales, as against 14,000 bales last year, and only about 150 bales are middling and above.

AUGUSTA.—Trade and collections are fair.

ATLANTA.—The weather has been more seasonable and has favorably affected all lines of trade. Retailers are busy and collections are improving.

MACON.—Trade and collections slow.

JACKSONVILLE.—Very warm weather affects trade unfavorably. Collections are only fair.

BIRMINGHAM.—Southern foundry pig iron No. 2 is scarce for immediate shipment at $23. Demand is strong for future delivery. Wholesale and retail trade show an increase over last week. Collections are a little slow.

MOBILE.—Money is tight. Call loans are bringing high rates. Jobbers are only doing a fair volume of business. Collections are slightly better, but some extensions are being asked. Lumber is still declining, but timber is firm. The naval-stores crop will be very short in this section.

MONTGOMERY.—Trade in all lines continues poor, with collections very slow.

CHATTANOOGA.—Trade conditions continue satisfactory to both jobbers and retailers. Building is still active. Collections are fair.

MEMPHIS.—Weather conditions are favorable and business is improving. Collections are slow.

NASHVILLE.—Business, which has been slow on account of practically no spring weather, is having new life infused into both retail and wholesale lines by a rising thermometer. The feature of business, however, is the activity in manufacturing. There has been incorporated recently the National Hosiery & Yarn Manufacturing Company, a $1,000,000 concern, with Nashville as headquarters, and with mills at Birmingham, Ala., and Mount Vernon, Ind.

LITTLE ROCK.—Jobbers report the volume of business almost double that of a month ago, with collections ranging from fair to good. Retail trade continues fair.

NEW ORLEANS.—Retail trade is fair and jobbers show a slight improvement in filling-in orders, with good business being booked for future shipment. Money is growing easier, but collections are still a little backward.

FORT WORTH.—Trade is only fairly active and collections are slow.

DALLAS.—Trade is quiet and collections are slow. Jobbers are receiving some countermands and many requests to hold fall shipments until crop conditions become more certain.

WACO.—Wholesalers report a good volume of business. Retail trade is very slow. Collections are slow.

SAN FRANCISCO.—Trade at this city continues dull and industrial unrest persists, though the ironworkers' strike has been settled. Collections are fair.

SEATTLE.—While local business conditions continue only fair, jobbers have had a better demand for seasonable goods from Alaskan buyers. Collections are slow.

SPOKANE.—Trade in most lines continues good. Collections are fair.

TACOMA.—Steady gains in general trade are noted. Collections are fair.

PORTLAND, ORE.—Loggers have agreed to close their camps until fall owing to reduced demand from mills, hoping thereby to maintain existing prices, Jobbers report trade brisk and collections good.

TORONTO.—Summer trade should now be in full swing, but its volume is not what might be expected. The past week has seen some improvement, and as a result the retail movement of summer lines of dry goods has shown something of a rush. The wholesale movement, however, is still on the light side. Reports as to fall wholesale trade continue encouraging. Orders have been unusually heavy. The grocery trade continues fairly heavy. Large shipments are going to the west and to northern Ontario. The enormously heavy immigration to western Canada has a pronounced effect upon western demand, but the manufactures of eastern Canada and new Ontario and its silver discoveries are proving a great factor. Shipments of goods to the new district are heavy and increasing. Fall orders have been exceedingly good. The hardware trade here is more active than almost any other line of wholesale trade. This is a year of unprecedented activity in all parts of Canada in the matter of building operations. Throughout Ontario the centers of population have seen great manufacturing activity. It has been necessary to enlarge plants, and the prosperity among employees and tradesmen has resulted in the building of large numbers of dwellings on every hand. Country trade has shown little change. The retail movement is reported fairly good. Collections are fair. Receipts of butter are heavy. Hay is very firm on light deliveries.

MONTREAL.—The movement of inward freight is still very heavy, and work continues night and day. Canada's import trade is this year increasing enormously, while her export trade is rather lighter than last year. The backward spring and recent traffic congestion is responsible for the decrease in agricultural exports. Exports of manufactures show a much smaller decrease. The population of Canada is increasing rapidly, and manufacturers in almost all lines are unable to keep pace with home demands. Sorting trade in summer dry goods is still a little quiet, but fall business comes in in a volume exceeding expectations. Clothing manufacturers report clearing up of spring-wear goods, although so far the demand for summer lines has been limited. Values of all textiles hold firm. Trade in both heavy hardware and shelf goods holds brisk. Demand for rails and rolling stock is greater than Canadian mills can supply, and the roads are placing orders outside. Country trade is moderately active. Cheese deliveries are light and export demand good. Collections are fair.

VANCOUVER-VICTORIA.—Wholesale and retail trade along the coast is showing more activity. A fair sorting trade is being done in summer lines, and business for fall has been heavy. Lumbering and other provincial industries are actively engaged. The shipping trade is brisk. There is a big demand from the Orient for Canadian flour. Labor is still scarce, notwithstanding that immigration has been heavy. Collections are satisfactory.

WINNIPEG.—As the season advances trade steadily takes on a more cheerful tone. Reports from most parts of the country state that the damage to the crops by the late spring was overestimated. The reduction in the planted area will not be general as was supposed. In many districts there has been a decided increase. According to many authorities, therefore, the outlook favors a crop equal to that of last year. Retail trade throughout the country is brisk and collections show slight improvement. The sorting trade is quiet, but a good business is being done on account of fall.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending June 13 shows an aggregate of $2,610,497,000, as against $3,039,828,000 last week and $2,656,012,000 in the corresponding week last year. Canadian clearings for the week aggregate $84,415,000, as against $89,199,000 last week and $76,543,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	June 13	*Inc.*	*Dec.*	*June 6*
New York	$1,487,442,000	....	10.8	$1,823,109,000

Money Market.

Although no gold shipments to Paris were announced until Friday, the New York loan market showed a hardening tendency, the renewal rate for call money advancing from 2 to 2½ per cent., while quotations for six-month loans went up from 4¾ to 5 per cent. This was in part the result of the heavy reduction of the surplus reserve shown by last Saturday's bank statement, but the chief factor in the case was Secretary Cortelyou's call on the depository banks for the return, prior to July 10, of $30,000,000 of government deposits. It is, of course, argued that the redemption of the remaining $36,000,000 or so of the 4 per cent. United States bonds will be practically completed by that date, thereby at once releasing the sum which has been called in by the Treasury. The New York banks' share of the amount is some $5,000,000, but it is altogether likely that the interior banks which hold such deposits will make their repayments to the government in part by drafts on their New York correspondents.

Week.	H.	Call L.	Prev. rate.	Time, 30-90 days. H.	L.	Time, 4-6 mos. dble names. H.	L.	Com. paper H.	L.

June 7, 1907.	2½	1¼	2	4½	3¾	5	4½	5½	5¼
June 15, 1906	5	2½	3	4¼	3¾	5	4¾	5½	5

New York Banks.

Last Saturday's bank statement was a rather confusing document. Its principal feature was a decrease of over $9,000,000 in the cash holdings of the Clearing House institutions, which was about twice the amount of the actual loss indicated by the preliminary estimates. This would, of course, be accounted for by the fact that heavy gold exports had been in progress, and that a considerable amount had been carried over in the averages from the preceding week. The loans were increased over $1,500,000, but the decrease of $9,000,000 in deposits was in excess of the difference between the changes in cash and loans to the extent of $1,500,000. The reserve requirements were $2,263,000 less than the week before, but there was a falling off of $6,801,000 in the surplus reserve, which was practically cut in half. The figures of the statement compare as follows with those of the preceding week:

	June 8	June 1	Changes
Loans	$1,141,445,400	$1,139,931,100	I. $1,514,300
Specie	213,574,200	221,928,000	D. 8,353,800
Legal tenders	72,191,700	72,903,100	D. 711,400
Deposits	*1,119,141,500	1,128,194,600	D. 9,053,100
Circulation	50,565,900	50,628,900	D. 63,000
Total reserve	285,765,900	294,831,100	D. 9,065,200
Reserve required	279,785,375	282,048,650	D. 2,263,275
Surplus reserve	5,980,525	12,782,450	D. 6,801,925

The following table shows the bank holdings on the respective dates:

	June 8, 1907	June 9, 1906	June 10, 1905
Loans	$1,141,445,400	$1,059,162,600	$1,089,520,900
Specie	213,574,200	187,129,600	205,492,700
Legal tenders	72,191,700	81,816,300	85,293,000

Foreign Exchange.

The foreign exchange market has been decidedly firm this week, the rate for bankers' demand sterling rising to 4.87.05@4.87.10, with a further advance to 4.87.15 on Friday. There was also a rather scanty supply of bills and a pretty fair inquiry for foreign remittances. The chief point of interest in the market, however, was the absence of gold exports up to Friday. Exchange on London at Paris had a rather sharp advance to 25 francs 14½ centimes, and the Paris market did not bid for the new gold which came in this week at London. Another circumstance of some significance was that on last Monday bar gold in London fell ⅝d. per ounce to 77s. 9¾d., indicating that the pressure to obtain specie was over for the present. In consequence of the further rise in exchange on Friday there were, however, gold engagements of $2,000,000.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

June 8	June 10	June 11	June 12	June 13	June 14
4.84½ @ 4.87½	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.87.05 @ 4.87.10	4.86.95 @ 4.87.10	4.87.00 @ 4.87.05	4.87.00 @ 4.87.10	4.87.00 @ 4.87.10	4.87.00 @ 4.87.15

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.83.75 @ 4.83.85	4.83.75 @ 4.83.85	4.83.75 @ 4.83.80	4.83.70 @ 4.83.80	4.83.75 @ 4.83.85	4.83.70 @ 4.83.80

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.60@4.87.65; commercial bills, 4.83@4.84; francs, 5.19⅜ less 1.16@5.16¼ less 1-16; reichsmarks, 94⅜@95 3-16 less 1-16.

The Bank of England's discount rate remains unchanged at 4 per cent. The bank this week gained £229,364 in gold, and its proportion of reserve to liability increased from 46.90 per cent. to 46.96 per cent. The weekly return showed an increase of £444,000 in the market's borrowings from the bank. In the London open market call money is 3¼@3½ per cent. Discount is 3 11-16@3¾ per cent. The Bank of France showed this week a gain of 38,350,000 francs in gold and a decrease of 41,728,000 francs in its discounts. Its rate remains at 3½ per cent., the Paris market quotation being 3½ per cent. Exchange on London at that city is 25 francs 14 centimes. At Berlin the bank rate is 5½ per cent. and the market 4½ per cent.

New York Securities Market.

Developments having a bearing upon the stock market have been mixed in character, although in the main of a favorable nature. The government report appearing on Monday, and the later sharp break in grain prices on good advices as to growing weather, indicated a better outcome for wheat and other cereals than earlier anticipated. The announcement from Washington that the administration had decided to abandon the intention of prosecuting Mr. Harriman in connection with Union Pacific and Chicago & Alton affairs, and the reports that there would be no more gold shipments, the Bank of France having apparently obtained sufficient specie from here as well as from London to satisfy its requirements, were also supporting features. On the other hand, last Saturday's bank statement was much poorer than had been looked for and reduced the surplus reserve to less than $6,000,000, while on Wednesday came the announcement that in order to prepare for the redemption of the maturing 4 per cent. bonds on July 1, Secretary Cortelyou had called on the depositary banks to return $30,000,000 of government deposits. This occasioned a hardening of both call and money rates, although it is generally conceded that the release of the funds returned to the Treasury by the bank through bond redemptions will obviate any serious disturbance in the money market. On Saturday, and again on Monday, stock prices were strong and tended to advance, but it was evident that the trading was entirely professional, and that covering of shorts furnished the principal motive power. In fact, by Tuesday the market, in addition to becoming very dull, ignored the veto message which Governor Hughes sent to the New York legislature of the 2-cent railway fare bill. Increased dullness was also accompanied by a disposition on the part of the market to sell off, which was, in a measure, increased by the announcement that the government had instituted suits against the alleged anthracite coal combination, and on Thursday the inactivity became profound. On that day the transactions on the Stock Exchange fell to only 175,000 shares, being, in fact, the smallest day's business witnessed at that institution in two years. Union Pacific and the other Harriman stocks naturally led in the early covering movement, there having been a good many shorts put out in that group on the chance that the government would decide to institute proceedings against the financiers connected with them. On Friday Union Pacific was, however, depressed by reports that litigation was proposed against the new convertible bond issue. Delaware & Hudson and Reading were affected unfavorably by the suit against the coal roads, and the latter was particularly weak on Friday. The Interborough-Metropolitan stocks became somewhat conspicuous in the midst of Thursday's dullness by reason of the extreme weakness which they develope, although the cause of the selling was practically unknown. Despite the fact that Mr. James J. Hill was quoted at length as giving a rather favorable view of crop and business conditions in the northwest, the stocks with which he is associated failed to respond to any extent. Further reductions in the prices of copper were naturally attended by more or less heaviness and irregularity in Amalgamated as well as in the other copper stocks. Friday's market was adversely influenced by the unexpected engagement of $2,000,000 gold for export to Paris.

Smallest ever recorded, week ending Sept. 1, 1902			21,196

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week ending June 8 and for the forty-nine weeks of the present season compares with similar periods one and two years ago as follows:

Week ending	Flour, barrels	Wheat, bushels	Corn, bushels	Oats, bushels
June 8, 1907	401,816	3,201,272	8,258,284	2,622,128
June 9, 1906	373,873	1,881,359	5,164,259	3,632,998
June 10, 1905	286,685	1,611,289	3,444,153	3,581,038
Season				
July 1, 1906, to June 8, 1907	19,719,775	240,043,716	197,917,924	192,683,541
July 1, 1905, to June 9, 1906	19,040,891	225,712,345	179,927,653	207,036,588
July 1, 1904, to June 10, 1905	16,065,634	202,245,950	173,149,975	153,579,398

Cereal Exports, with Destinations.

The exports of wheat and corn (in bushels) and of flour (in barrels) from the United States and Canada (coastwise shipments included), with ports of destination, for the week ending June 6, 1907, follow:

To	Wheat	Corn	Flour
Liverpool	861,608	122,354	13,704
London	473,534	72,000	31,211
Bristol	253,915	31,502	10,613
Glasgow	144,138	80,725	37,995
Leith	55,856	----	----
Hull	188,655	----	12,200
Newcastle	----	----	----
Manchester	83,034	----	----
Belfast	28,023	92,767	25,198
Dublin	70,053	----	856
Other United Kingdom	----	----	2,400
United Kingdom, orders	----	----	----
Antwerp	207,259	66,000	----
Holland	79,000	150,357	18,057
France	72,500	----	----
Germany	176,000	378,999	31,262
Portugal, Italy, Spain and Austria-Hungary	655,179	----	1,200
Scandinavia	----	117,855	1,200
Asia	41,750	----	144,424
Africa	----	----	----
West Indies	13,000	24,880	50,227
All other	----	----	5,490
Total	3,404,414	1,137,439	386,037

Exports of oats amounted to 266,840 bushels; of barley, 157,357 bushels, and of rye, 79,500 bushels.

Cereal Exports by Ports from the United States and Canada.

World's Wheat and Corn Shipments.

WHEAT—BUSHELS.

	June 6, 1907	May 30, 1907	June 7, 1906
United States and Canada	5,263,000	2,402,000	3,301,000
Argentina	3,320,000	2,216,000	1,848,000
Russia	1,680,000	2,080,000	3,520,000
India	348,000	632,000	904,000
Danubian	1,200,000	1,776,000	664,000
Australian	600,000	560,000	160,000
Total	12,411,000	9,666,000	10,397,000

CORN—BUSHELS.

United States and Canada	1,135,000	864,000	573,000
Argentina	1,394,000	867,000	3,086,000
Russia	595,000	1,207,000	85,000
Danubian	2,031,000	1,249,000	527,000
Total	5,155,000	4,187,000	4,271,000

New York's Foreign Trade.

IMPORTS.

	1907	1906
Dry goods	$2,837,792	$2,191,669
General merchandise	13,023,987	8,716,686
Total week ending June 8	15,861,779	10,908,355
Since January 1	385,775,160	336,718,329

EXPORTS.

	1907	1906
Exports week ending June 8	$10,933,296	$9,959,917
Previously reported	265,238,912	273,518,093
Since January 1	276,172,208	283,478,010

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	June 7, 1907	May 31, 1907	June 8, 1906
American	2,677,275	2,812,095	2,158,010
Other kinds	1,396,000	1,369,000	1,463,000
Total	4,073,275	4,181,095	3,621,010

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	June 7, 1907	May 31, 1907	June 8, 1906
Great Britain and continent	2,521,000	2,599,000	1,822,000
Egypt	106,000	119,000	83,000
India	753,000	787,000	984,000
United States	693,000	766,000	732,000
Total	4,073,000	4,181,000	3,621,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	Last week	Last year
Week	4,061	43,455	47,994
Season	13,069,653	13,025,592	10,384,561

Boston Shoe and Leather Market.

The leather market has been quiet. Some fair orders for grain leathers have been placed, but on the whole the volume of business is not up to expectations. Prices hold firmly at previous quotations. The glazed-kid market has not recovered from the cut in prices reported two weeks ago. There is said to be a good demand for hides of late, but take-off western hides have been neglected. Shoe manufacturers, particularly those making heavy shoes, are not doing as much business as they had hoped for. Orders are expected to come in late with a rush, to the inconvenience of both wholesaler and manufacturer. Wholesalers are said to be well stocked with summer goods, which have moved slowly, owing to weather conditions. The *Shoe and Leather Reporter's* figures make the usual showing of a falling off in shipments as compared with last year, viz: Last week, 93,931 cases; preceding week, 85,785; last year, 101,259; total for 1907, 2,186,690; total for 1906, 2,267,803; decrease, 81,113.

Wool Markets.

Foreign merino wools have been in very heavy demand, but domestic grades have been neglected. From 4,000 to 5,000 bales of fine merinos have been sold at 40@44 cents for 64s and above, the American Woolen Company buying freely, and 400 bales of super combing sold at 45@45½ cents. Crossbreds, most of the offerings being New Zealands, have been very quiet. Stocks of domestic wools are light and demand is moderate, as manufacturers are well stocked. New wools are arriving slowly, and fine and fine medium Arizona has sold at 23@24 cents, with half blood at 26@27 cents. Eight months Texas sold at 23@24 cents. Interest now centers in the west. In Texas sales have been made at San Angelo of eight months at 19@20 cents and twelve months at 23½@25 cents. Active bidding is going on in Oregon, where, at Heppner, 1,400,000 pounds have sold at 19½@20 cents; at Shaniko sales have been made at 19@20 cents, with a few clips at 21 cents. The famous Baldwin clip in that state has sold at 22⅞ cents, 2½ cents below last year's figure. Idaho has been well cleaned up, the latest sales being at 19 cents, with choice higher. Shearing is beginning in Montana, with some sales at 21@22 cents, but no more heavy contracts have been made. While there is a generally better feeling in the market, many operators are still holding off, as they cannot see where there is any money to be made at present prices, especially as reports continue to confirm the statement that this year's domestic clip is of short staple, and that the demand from the goods manufacturers will be for long staple wools. It is also likely that there will be little wool available for this country secured at the next London sales.

THE "SHOT" TOWER.

The New York *Sun* explains that "the necessity for the 'shot' tower arises from the fact that molten lead must be dropped a long distance to make shot round and perfect in shape. It is an old-fashioned method, but it does not seem to have been improved on. The lead is first melted and tested and then it is run out into bars and transported to the top of the building. There it is melted again and poured through colanders, which are either hollow hemispherical iron disks or rectangular, flat sheets, each one perforated with a set of holes of uniform size, made perfectly smooth and exact. The lead when poured must be of the proper temperature for the special size to be made, and the workmen are careful to keep a film of oxide as a lining to the colander, which is thought to improve the roundness of the shot, possibly by expediting its cooling while it is passing through the air. The holes vary from 1-50 to 1-360 of an inch, but the shot are of larger diameter than the holes. In falling to the base of the tower the particles of semi-fluid lead, acted upon alike over their whole surface by the current of air, assume the globular form, and by the time they reach the bottom they are sufficiently hardened by the cooling to resist the shock of striking the surface of the vessel of water placed to receive them. Large-sized shot require a greater height than the smaller, and for the latter towers no higher than 100 feet are required. The tallest shot tower in the world is said to be in Villach, Carinthia, the structure being 249 feet in height.

"Taken from the cistern of water into which they have dropped, the shot are dried and then assorted according to their sizes by sifting them in a revolving copper cylinder set slightly inclined and perforated with holes, which increase in size toward the lower end. The smaller sizes thus drop through above and the larger ones lower down, and each size is received into its own box. The shot get their superficial finish by being revolved for some time in a cylinder with pulverized graphite. Imperfect shot are separated from the truly spherical by allowing all to roll down an inclined plane. The perfect ones run straight down the middle, while the imperfect work off to one side or the other.

"A method of making shot without high towers has been patented in this country. The substitute for them is a low elevation, upon which a powerful current is blown, thus producing the effect of a long continued fall. Still another method is by pouring lead upon a revolving table on which is placed a cylinder of perforated sheet brass. The lead is thrown by centrifugal action through the perforations in the sides, forming round, brilliant shot, which strike against a linen screen placed to intercept them."

BRADSTREET'S

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers and public men. It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES, SINGLE INSERTIONS, DISPLAYED, 25 CENTS A LINE, AGATE MEASURE.

DIVIDENDS.

GENERAL ELECTRIC COMPANY.

A dividend of two dollars per share will be paid on July 15, 1907, to stockholders of the General Electric Company of record at the close of business hours on Saturday, June 15, 1907. The stock transfer books will not be closed.

By order of the Board of Directors.
M. F. WESTOVER, Secretary.

SPECIAL NOTICES

"A little leak will sink a ship."

It is the little things that count. Bradstreet's list of failures show it is not the colossal breaks, but the little leaks that sink the ship.

The matter of ink may seem trivial, but if you are not getting the best possible results you have a leak.

PLUG IT. SAVE THE SHIP.

UseCarter's Ink.

INSURANCE

1850—1906.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 22, 1907.

A new complexion has been given to the wine growers' movement in southern France within the week. The leader of the movement, Marcélin Albert, on Saturday issued a bulletin in response to Premier Clemenceau's open letter to the mayors and municipal officials of the disturbed districts, already referred to, in which he declared that those acting with him had no orders to receive from the President of the Council. This practical defiance of the government has had its natural consequences. On Monday the French government decided to arrest and prosecute all the leaders of the agitation, which had assumed some of the features of a revolt. Considerable detachments of troops were sent to aid the local authorities, who were directed to make the arrests. One of the leaders, Ferroul, was arrested without difficulty on Wednesday, but the chief director of the movement, Albert, escaped apprehension at that time. Some bloodshed has occurred as the result of collisions between the troops and the people, and—a much more serious matter—mutinies are reported to have broken out among the troops. One dispatch announced that a battalion of one regiment had gone over to the rioters, while another account had it that three regiments had mutinied. The adoption of repressive measures by the government, coupled with the news of disaffection among the soldiers, seemed to render its position one of some difficulty, but Premier Clemenceau's demand for a vote of confidence upon being interpellated in the Chamber of Deputies was answered in the affirmative by a vote of 327 to 227.

Ground was formally broken on Thursday for one of the great engineering works of the modern world. On that day Mayor McClellan of New York City turned the first spadeful of earth on a hillside on the east bank of the Hudson, about three miles from the town of Cold Spring, as the beginning of the excavation for the Catskill aqueduct. This great structure is intended to carry from the valleys of the Catskills, over a distance in all of 130 miles, a supply of water amounting, when all the works are completed, to 600,000,000 gallons. One of the features of the work will be the Ashokan reservoir, which, with a length of twelve miles and an average width of one and a half miles, will have a capacity of 120,000,000,000 gallons. Another feature will be a gigantic tunnel or inverted siphon which will dip under the Hudson to a depth of 650 feet at Storm King mountain and come up on the other side. The aqueduct itself will be almost of the proportions of a subway tunnel. It is estimated that the entire work will cost over $160,000,000 and that it will be completed in the course of twenty years or thereabouts. The projectors of this great work have no doubt of its entire practicability, while they are stimulated by the consciousness that when their undertaking is completed it will surpass any of the old world marvels in aqueduct construction of which authentic records or remains survive.

To all appearance the agitation in Japan over the San Francisco incident is simmering down and is likely to have little result. It is pretty well understood to have been fostered by the opposition leaders, who thought they saw in it an opportunity to embarrass the existing administration and perhaps to overthrow it. The official warning given to the press by the Tokio authorities has not been without fruit, and less matter of an inflammatory nature has lately made its appearance. There was talk of the Japanese ambassador, Viscount Aoki, being forced to resign as the result of his attitude touching the matter as well as in relation to the school controversy, but there seems no likelihood of any such action being taken. Foreign Minister Hayashi was yesterday reported to have announced that there was no foundation for the reports that the ambassador was to be recalled, and the latter appears to have postponed an intended trip to the Pacific coast, at least in part, for the reason that he did not wish to give any ground for misconception as to his action. It is well known that he deprecates any agitation over what he regards as a trifling matter of purely local import. The diplomatic authorities on both sides, it must be said, have acted all along with tact and discretion in reference to the San Francisco incident.

Conferences looking to an agreement on certain tariff matters between France and the United States have taken place of late between Secretary Root and M. Jusserand, the French ambassador at Washington. These exchanges seem to have been brought about as a result of the negotiations with Germany which recently found expression in formal action by the governments of the two countries. From what can be learned of the attitude of the State Department, it is willing to grant to France concessions in tariff matters similar to those accorded to Germany, so far as those concessions are applicable to French conditions. As the situation is at present, however, the State Department is unwilling to go any further, and it believes that the executive has sufficient authority under existing grants of power to safeguard the trade in products of the United States against foreign discrimination. There are indications that the questions under consideration with the French government will be settled before long. It may be noted that within the week the French ambassador has submitted to the Secretary of State a copy of the articles of incorporation of the French Chambers of Commerce, for whose certificates of value recognition is asked similar to that accorded to those of the German Chambers. The provisions of these articles will be passed upon by the Treasury experts before any further steps are taken.

As the result of Judge McPherson's consideration of the arguments presented in relation to the 2-cent passenger fare law of Missouri, the act has gone into effect for a three months' trial, and if at the end of that time the rate is found to be unremunerative its enforcement may be contested in the courts by the railroads. Meanwhile the state officers are temporarily enjoined from enforcing the maximum freight rate law, argument upon which will be heard later in the Federal Court. This conclusion was arrived at in the suit brought by the Wabash Railway Company against the Attorney-General of Missouri, upon the decision in which seventeen other similar cases depended. Judge McPherson said in his opinion that it was conceded by all that the fixing of rates by the legislature was presumptively correct. On the other hand, it could not be denied that such rates must be reasonably remunerative. No fair-minded man would dispute the doctrine, the judge said, that the railways are entitled to cost and a reasonable profit. How to arrive at the cost and the reasonable profit was, he admitted, a most difficult problem, but it must be solved, and the solution could only be reached as the result of judicial proceedings, and must be determined by the courts alone and ultimately by the Supreme Court of the United States.

Legislation prohibiting an adult woman from working in a factory before six o'clock in the morning or after nine o'clock in the evening cannot be sustained as a proper exercise of the police power of the state, according to a decision lately handed down by the Court of Appeals of New York in the case of People vs. Williams. Judge Gray, who writes the opinion of the court, says that the legislation in question is certainly discriminative against female citizens in denying to them equal rights with men in the same pursuit. The courts have, Judge Gray says, gone very far in upholding legislative enactments framed clearly for the welfare, comfort and health of the community, and he does not deny that a wide range in the exercise of the police power of the state should be conceded. When, however, it is sought, under the guise of a labor law, arbitrarily to prevent an adult female citizen from working at any time of the day that suits her, he thinks it is time to call a halt. Such legislation, he says, arbitrarily deprives citizens of their right to contract with each other. Judge Gray remarks in a passage not without significance that the tendency of legislatures, in the form of regulatory measures to interfere with the lawful pursuits of citizens, is becoming a marked one in this country, and that it behooves the courts fearlessly to interpose the barriers of their judgment when invoked to protest against legislative acts plainly transcending the powers conferred by the constitution upon the legislative body.

It was made apparent some time ago that whatever might be the case as regarded definite compacts, something in the nature of an understanding had been developed between the governments of Great Britain, Spain and France in relation more particularly to their interests in the Mediterranean. The marriage of the King of Spain to an English princess last year was perhaps not entirely without significance from that point of view. It now appears that treaties have actually been concluded between Great Britain and Spain and between Spain and France which, while distinct in form, have the same general purpose, and in effect bring about what has been styled a new triple alliance. The agreements are declared to be purely pacific in purpose, but as they have for their main object the guaranteeing of the security of the coasts and dependencies of the contracting nations, possible circumstances may, of course, give them another aspect.

ANOTHER DUMA PASSES.

Russia's second Duma has gone the way of the first one, and, as intimated last week, the end was brought about by Premier Stolypin's demand for the exclusion of certain members of the lower house accused of a plot against the Czar, and the arrest of some among these declared to be most compromised. The government did not wait for the action of the house upon the Premier's demand. The committee of that body intrusted with the examination of the indictments against the accused Social-Democratic members decided that it would be impossible to review all the evidence in the case in one day, and asked that it be given until Monday to report. This was on Saturday afternoon. The Duma so ordered and adjourned until Monday. Early on Sunday morning an imperial ukase was issued dissolving the Duma and ordering that new elections to another Duma be held, beginning September 14, and that the new legislative body be convoked on November 14 next. The terms of this ukase were agreed upon before midnight. Its issuance was followed by the promulgation of an order addressed by General Dracheffski, Prefect of St. Petersburg, to the municipal press, which announced that the publication of any article inimical to the government would be considered a misdemeanor punishable by a fine of $1,500 and imprisonment in jail for three months. The concentration of large bodies of troops in the capital helped toward the quiet reception of the news by the populace.

In a manifesto issued with the ukase the Czar sets forth the grounds for his action, coupled with the announcement of his determination to abrogate the electoral law and to replace it by a new one. Premising that since the dissolution of the first Duma his government had adopted a series of successive measures to pacify the country and establish the affairs of state in regular course, the Czar declares that the second Duma was summoned to contribute, according to his sovereign will, to the pacification of Russia, principally by the work of legislation; next, by an examination of the budget, and, finally, by the national use of the right of addressing interpellations to the government. A considerable section of the second Duma failed to justify his expectations, but displayed a manifest tendency to augment Russia's troubles and assist in the disruption of the state. As a result a hostile spirit was introduced into the Duma itself which prevented the union of a sufficient number of its members desirous of working for the interests of the country, and that body either failed to discuss important measures which were drawn up by the government or delayed their discussion, or else rejected them, not even recoiling from the rejection of laws which punished the open support of crimes, and particularly the disseminators of trouble, who had evaded condemnation for assassinations and acts of violence. After complaining of obstacles growing out of the examination of the budget and the exercise of the right of interpellation, the Czar finally refers to the case of the accused members in regard to which "the Duma failed to carry out immediately the lawful demand of the authorities, which admitted of no delay."

The Czar finds the main cause of the Duma's failure to answer expectations to lie in the fact that, owing to defects in the electoral law, that body was composed of members who were not truly representative of the needs and desires of the people. He announces, therefore, that he has decided to modify the procedure in choosing elective representatives of the people to the Duma, in order that each section of the people may have its own representatives. The Duma, he says, should be Russian in spirit, and while other nationalities forming part of the empire ought to have representatives of their needs in that body, they ought not to appear, and shall not appear, in such numbers as will make it possible for them to be arbiters of questions which are purely Russian, and within the confines of the state where the people have not attained sufficient civic development, the elections to the Duma must be temporarily suspended. Recognizing that the necessary "electoral modifications could not have been introduced in the customary legislative way by the Duma," the Czar resorts to his "historic power" and announces that he gives Russia a new electoral law and orders its promulgation in the Senate.

Such information as has come to hand regarding the new electoral basis indicates that an effort has been made to reduce to a minimum the registry of those classes of the population which have shown the greatest hostility to the government. A reduction is made in the deputations from the eastern and Siberian provinces, which returned Radical deputies to the late Duma; the representation from Poland is cut down to one-third of what it was, and an almost similar decrease is made in the Caucasus region. Increases in the number of delegates are provided for in certain provinces and cities which returned Conservative members heretofore. Of twenty-four towns formerly electing representatives directly, only seven are to retain the method of direct election. Direct representation of workingmen is retained in only six provinces, and peasant deputies are required to be house owners personally engaged in agriculture. The officials say that under the new law no single class or person possessing the franchise under the existing law loses it. It seems certain, however, that the representatives of certain elements in the population will be fewer in the new Duma, which will have 442 instead of 524 members—a reduction of 82. As it is, the new law is less extreme than it was originally framed to be, owing to the efforts of Premier Stolypin, who secured the exclusion of certain provisions increasing the educational and property qualifications and the age limit of electors.

HEAVY GAINS IN RAILWAY NET EARNINGS.

One need hardly be told that railway gross earnings are still on the up-grade, for that fact has become somewhat of a commonplace ere now. Therefore interest in gross receipts is not so keen. Indeed, there is more of a disposition to examine the results as regards operating expenses as well as net earnings, especially as the cost of operation has been going higher and higher for one reason or another, but more particularly because of the increased rates of wages prevailing. That costs of operation are mounting is made quite patent by the latest conclusive returns—those for April. Thus the increase in the item mentioned amounts to no less than 22.8 per cent. as contrasted with similar figures for April, 1906. Happily, however, gross earnings expanded heavily, the gain over April last year being 23.6 per cent. on a total of $128,726,364. At the same time net earnings moved up 25.5 per cent., the figures for April this year aggregating $38,055,919, as against $30,318,107 for the like month in 1906. Practically all conditions, that is as regards the movement of freight, were propitious in April this year. Congestion, which had been so prevalent, was relieved; the car supply improved, shipments of wheat increased 100 per cent., and traffic in general was moved with a marked degree of freedom. On the other hand, the coal miners' strike of April, 1906, exerted an adverse influence on railway receipts, and this fact must be taken into consideration when analyzing the returns for April of the current year. Indeed, if we eliminate the net earnings figures of the anthracite coal roads, the gain in net revenue would amount to about 15 per cent. instead of the 25.5 per cent. reported. Then, again, many other roads were similarly affected in April, 1906, so that much of the gain now noted is only favorable by contrast with a disturbed period. But as it is, the reports show that railway net earnings are more roseate in character, in that the disposition is to score gains rather than losses, which was the tendency in January, February and March of the current year. With a continuance of seasonable weather it is probable that further good developments will ensue, although the cost of doing business will continue high.

Gross receipts, operating expenses and net earnings for April this year and last are set forth in the following:

	1907	1906	*Inc.*
Gross earnings	$128,726,364	$104,105,378	23.6
Operating expenses	90,670,445	73,787,271	22.8
Net earnings	38,055,919	30,318,107	25.5

Divided into groups, the showing as regards gross earnings is as follows:

	1907	1906	*Inc.*
Northwestern	$9,129,859	$7,325,816	24.5
Central-western	10,810,299	9,126,867	18.5
Trunk lines	28,897,640	23,250,966	24.1
Eastern	3,028,904	2,299,967	31.8
Coal roads	11,660,274	6,938,014	68.2
Southern	22,781,539	20,300,090	11.6
Southwestern	18,752,980	14,864,315	26.6
Pacific	23,654,869	19,999,343	18.5
Total	128,726,364	104,105,378	23.6

It will be seen that every group reports a goodly gain, the heaviest being that of the hard-coal roads—68.2 per cent.—while the next is that of the eastern roads—31.8 per cent. The southwestern lines contribute an increase of 26.6 per cent., the northwestern 24.5 per cent. and the trunk lines 24.1 per cent. Two groups, the central-western and Pacific, show advances that are identical in ratio—18.5 per cent. The southern roads furnish the smallest increment—11.6 per cent. The outcome as regards net revenue in April this year and last is brought out in the following:

	1907	1906	*Inc.*
Northwestern	$2,354,071	$1,921,293	22.3
Central-western	3,050,162	2,201,729	38.6
Trunk lines	8,296,863	7,106,107	16.7
Eastern	797,851	575,803	38.6
Coal roads	4,413,884	1,270,695	247.2
Southern	5,428,040	5,190,512	4.4
Southwestern	6,084,812	4,594,950	32.4
Pacific	7,630,236	7,457,018	2.4
Total	38,055,919	30,318,107	25.4

The heaviest gain is that of 247.2 per cent. reported by the hard-coal roads. The next two groups are the central-western and eastern, each of which shows an increase of 38.6 per cent. The southwestern roads report an advance of 32.4 per cent., the northwestern 22.3 per cent. and the trunk lines 16.7 per cent. The other divisions, the southern and Pacific, show only moderate accretions—4.4 per cent. and 2.4 per cent. respectively.

The swings in gross and net earnings for sixteen months back are shown in the following table:

	Per cent. inc. Gross	Net
	1907	1907
January	8.2	*2.4
February	7.7	*5.9
March	19.2	*0.2
April	23.6	25.5
	1906	1906
January	20.3	44.0
February	26.8	70.9
March	12.0	14.0
April	5.2	4.3
May	9.3	11.8
June	11.0	13.0
July	13.1	17.1
August	12.5	11.0
September	8.0	5.0
October	11.3	9.7
November	7.2	3.2
December	8.9	2.0

* Decrease.

Leading individual gains in net earnings as compared with April, 1906, are given in the subjoined table:

Reading	$1,067,707
Lehigh Valley	907,605
Central Railroad of New Jersey	800,310
Atchison	743,669
Erie	559,202
St. Louis & San Francisco	509,399
Pennsylvania, east of Pittsburgh and Erie	410,300
Rock Island	332,957
Buffalo, Rochester & Pittsburgh	328,322
New York, Ontario & Western	230,632
Baltimore & Ohio	201,302
Kansas City Southern	190,060
Pennsylvania, west of Pittsburgh and Erie	170,100
Chicago & Alton	166,047
Toledo & Ohio Central	162,115
Southern Railway	125,222
Mexican Central	123,196
Denver & Rio Grande	121,415
Union Pacific	119,441
Wabash	115,791
Illinois Central	112,303
Northern Central	109,900
Missouri, Kansas & Texas	104,128
Louisville & Nashville	100,447

Thus it will be noted that the list is led by the three hard-coal roads, the Reading, Lehigh Valley and Central of New Jersey, with gains of $1,067,797, $907,605 and $800,310 respectively.

THE SECOND HAGUE CONFERENCE OPENED.

The second Peace Conference formally initiated its sessions on Saturday with a brief meeting, lasting, it is said, less than half an hour. The first meeting was only for the purpose of preliminary organization, and the body then adjourned until Wednesday to give an opportunity for consultation regarding the programme of the conference and the personnel of its committees. As had been generally understood, M. Nelidoff, the leader of the Russian delegation, was named as president of the conference, and the interest of the first day's session centered in his opening address. In all, forty seven states are represented in the conference, and the accredited delegates number 239.

After a few introductory sentences which embodied, among other things, a complimentary reference to the President of the United States, M. Nelidoff said that the task before the conference as set forth in the programme accepted by all the powers is twofold. On the one hand means are sought to bring about an amicable settlement of the differences which may arise among nations and thus to prevent ruptures and armed conflicts, and on the other hand an endeavor is to be made in the event of war breaking out to mitigate its onerous effects alike on combatants and on those indirectly affected. M. Nelidoff adduced some considerations to show that these objects are not incompatible, and that the results of the first conference were not unimportant, saying that the solemn

recognition of the principle of arbitration has already created among the various states a disposition to resort to arbitration for a settlement of disputes the limits of which have always a tendency to widen.

M. Nelidoff warned his hearers not to be too ambitious, nor to forget that their means of action are limited, and that nations are living beings just like the individuals composing them, and above all not to lose sight of the fact that there is a whole class of questions in which the honor, dignity and essential interests of individuals as well as of nations are engaged, and in which neither party, whatever the consequences, will recognize any authority but that of its own judgments and personal sentiments. "But," M. Nelidoff said, "that should not discourage us from dreaming of the ideal of universal peace and the fraternity of peoples, which are, after all, but the natural higher aspirations of the human soul," adding: "Our path is lit by the bright star of universal peace which we shall never reach, but which will always guide us for humanity's good, for whatever within the modest limit of our means we can do for individuals by lightening the burdens of war, and for states by preventing conflicts, will entitle the governments we represent to the gratitude of humanity."

These remarks by Russia's leading spokesman in the conference seemed to produce a depressing effect, particularly upon those who hoped for a widening of the scope of discussion in the conference so as to permit of a debate upon the question of a limitation of armaments. It appeared probable at first that hope must be abandoned. It was announced in Washington dispatches on the opening day that the United States delegates would not bring the matter up for discussion, regarding it at present as a purely European question, which they were relieved from the necessity of bringing to the fore in view of the known opposition of several of the great European powers. No little surprise was therefore occasioned by Gen. Horace Porter's announcement when the conference reconvened on Wednesday that the United States reserved the right to present the question of the limitation of armaments. It is not understood that any proposal on the subject has yet been formulated. This statement was apparently made so as to prevent the silence of the United States from being construed as an acquiescence in the restriction of the work of the conference. Another subject in respect to which a reservation was made by the United States representative was that of the collection of contractual debts by force. Notice was also served by Sir Edward Fry, on the part of Great Britain, that his government reserved the right to introduce subjects outside the programme. Another incident of interest was the announcement made by Baron von Bieberstein that Germany intended to offer a proposal for the establishment of an international prize court, to which appeals could be made during a maritime war and the decisions of which should be final. This proposal was seconded by General Porter on behalf of the United States, while Sir Edward Fry said that his government intended to advance a project on similar lines.

The propositions to be laid before the conference under the programme agreed upon will be digested and formulated by four committees dealing with arbitration, land war, maritime war and the Geneva convention. The presidents of these committees are, respectively, M. Bourgeois of France, M. Beernaert of Belgium, Count Tornielli of Italy and M. de Martens of Russia. Gen. Horace Porter is an honorary president of the second, as is Mr. Joseph H. Choate of the third of these committees. It is believed that to the latter of these two committees will fall such subjects as the Drago doctrine, which will probably be brought forward in a modified form. Señor Drago, representing Argentina, is one of the vice-presidents of that committee, which will deal also with such matters as bombardments, blockades, contraband, and in general the rights of neutrals and belligerents during a war part of the operations of which are carried on at sea. French is recognized as the language of the conference. Under the rules of procedure adopted, each delegation is to count as one and voting is to be by roll call in alphabetical order—a system which, it will be seen, increases the relative importance of the smaller states.

MAY AND ELEVEN MONTHS' TRADE.

A feature of the May foreign trade statement is the shrinkage shown in all export trade in that month as compared with April, which shrinkage seems to have been greatest in exports of other than farm products. At the same time imports were maintained at a very high, though not record, monthly level, the net result being the smallest excess of exports over imports shown in any month for many years past. The following table gives the values of the imports and exports of merchandise for May and the eleven months ending therewith, with comparisons for the preceding year:

May	1905	1906	1907
Imports—Free of duty.	$40,576,457	$47,121,341	$54,947,281
Dutiable	51,948,967	57,787,856	71,659,047
Total	92,525,424	104,909,197	126,606,328
Exports—Domestic	121,314,016	128,153,662	131,811,810
Foreign	2,479,553	2,391,725	2,795,520
Total	123,793,569	130,548,387	134,607,330
Excess of exports	31,268,145	25,639,190	8,001,002
Eleven mos. end'g May			
Imports—Free of duty.	479,206,203	505,413,825	596,265,767
Dutiable	547,859,623	620,368,550	725,739,665
Total	1,027,065,826	1,125,782,375	1,322,005,432
Exports—Domestic	1,372,962,232	1,594,978,772	1,719,737,687
Foreign	24,445,948	23,851,745	23,221,523
Total	1,397,408,180	1,618,830,517	1,742,959,210
Excess of exports	370,342,354	493,048,142	420,953,778

The total exports for May aggregated $134,607,330, a decrease of 14.6 per cent. from those of April, but a gain of 3.1 per cent. over those of May a year ago. The imports for May aggregated $126,606,328, a decrease of 2.2 per cent. from April, but a gain of 20.6 per cent. over May a year ago. Therefore the exports in May exceeded the imports by only $8,001,002, as against an excess in May a year ago three times as large, and an excess in May, 1905, nearly four times as large. The smallest excess heretofore shown in the present fiscal year was in July last year, when the excess of exports was only $9,100,825. The following table shows the values of the shipments in leading lines of export during May this year and last:

	1907	1906	*Changes, p. ct.*
Breadstuffs	$16,919,889	$10,605,000	Inc. 59.5
Meats and dairy prod	15,280,314	14,999,492	Inc. 1.9
Animals	3,367,115	3,765,842	Dec. 10.5
Cotton	19,815,442	16,531,005	Inc. 20.0
Mineral oils	5,670,784	6,217,663	Dec. 8.8
Total	61,062,544	52,119,002	Inc. 17.1

The large expansion in breadstuffs shipments in May over May a year ago—59.5 per cent.—is explained by increases over May, 1906, in the shipments of wheat, wheat-flour and corn; provisions gained only slightly, and exports of animals fell off, as did those of mineral oils, but shipments of cotton continued to show gains over the preceding year. It is worth noting that breadstuffs and cotton exports combined increased about $9,600,000, while exports of all kinds gained only $4,059,000, so that there must have been quite a decrease in exports of other than agricultural products, probably manufactured goods, which later figures will disclose. The exports of leading products for the eleven months make the following comparisons:

	1907	1906	*Changes, p. ct.*
Breadstuffs	$162,824,586	$169,953,553	Dec. 4.1
Meats and dairy prod	165,895,839	175,691,257	Dec. 5.6
Animals	31,204,012	37,484,995	Dec. 16.5
Cotton	468,992,047	382,252,616	Inc. 22.6
Mineral oils	71,750,344	73,588,208	Dec. 2.4
Total	900,756,828	838,970,629	Inc. 7.4

In the above showing, it will be seen, cotton is the one bright spot, the gain being 22.6 per cent., and the total increase in value being $86,740,000, whereas the gain in the aggregate of the five leading lines of exports was only $61,786,000.

The details of exports of breadstuffs, animals, meats, dairy products, mineral oils and cotton for the eleven months ending therewith compare with similar returns for a year ago as follows:

	MAY.			
	Quantities		*Values*	
Breadstuffs	1907	1906	1907	1906

1905-06	6,715,307	3,462,950,814	382,252,616

The exports for eleven months as given above show an aggregate of all of $1,742,959,210, a gain of 7.6 per cent., while the imports for eleven months aggregate $1,322,005,432, a gain of 17.5 per cent. over 1906, and the excess of exports is shown to be only $420,953,778, as against $493,048,142 in the preceding year. There is assurance in the above figures that all records of foreign trade in a fiscal year will be broken in the year drawing to a close, and that the aggregate of merchandise trade will considerably exceed the three-billion mark, a point never heretofore touched.

UNIFORM RAILROAD ACCOUNTING.

An important step which promises to have beneficial effects of a far-reaching kind has just been taken by the Interstate Commerce Commission, in the form of an order which goes into effect on July 1, whereby the accounts of the railroads of the country are to be standardized.

The plan whereby this is to be accomplished has been worked out during the past year by the statistician of the commission, Professor Adams, who, in preparing the forms for this purpose, was aided by the officials and accountants of many of the companies. Under the new system each railroad in the United States is required to keep its books in the same form, which of itself is an advantage; but far more important are the regulations promulgated by the commission in regard to the manner in which revenues and expenditure are to be set forth and different items and charges separated. For instance, the commission requires that operating accounts are to include no items pertaining to improvements and additions. The latter are to be kept separately, so that it can be at once seen what proportion of the earnings was applied to such purposes and what was the actual cost of operating. Similarly, accounts for depreciation of the roadway and of rolling stock are to be established. In fact, it has been very aptly stated that the new system makes for simplicity and clearness and will prove an effectual bar to the juggling of accounts, which, unhappily, has not been an unknown quantity in the reports of their finances and operation issued by not a few companies. Not only the public but the stockholders of railroad corporations, it is claimed, will now be put in possession of clear and lucid ideas regarding the position of the companies, and it might be noted that in investment circles the change is hailed with a great deal of approbation, as it can be readily appreciated that under it the holder or prospective purchaser of railway securities will no longer be more or less in the dark as to the actual position of the corporation in which he is interested.

While the public seems to regard the action of the commission as eminently satisfactory and as coming fully within the scope of its administrative functions, it is, nevertheless, intimated that certain large roads are not merely disposed to criticise the improved system, but are actually on the point of offering tangible opposition to its being put into effect, although what

form this opposition can take is hard to see. Somewhat strange to say, the Pennsylvania Railroad management is mentioned in this connection, although its late president, Mr. A. J. Cassatt, is understood to have been among the prominent railroad men who, while the Hepburn bill was under consideration in Congress, showed a willingness to have the Interstate Commerce Commission vested with enlarged power, notably in connection with the regulation and fixing of rates.

Another interesting report has also been current in connection with the standardization of accounts by the railroads of this country. It is to the effect that the Canadian Department of Railways has given close attention to the changes proposed by our own Interstate Commerce Commission, and that there is a disposition on its part to adopt the American system in connection with the accounts of the Canadian roads should it prove to be as advantageous to the public as promised.

CANADA'S MANUFACTURES.

Canadian manufacturing industry seems to be advancing by leaps and bounds, judging from a bulletin issued by the Canadian Census Bureau, which shows a total value of output in 1905 of $715,035,965, as against $481,053,373 in 1900 and $368,696,723 in 1890. Thus in fifteen years the factory output appears to have nearly doubled, and the gain in the five years from 1900 to 1905 was nearly 50 per cent. Ontario leads in manufacturing interests with an output of $365,692,144, with Quebec second with an output of $217,224,073. Montreal is the leading manufacturing city with a value of $99,746,772, followed by Toronto with an output of $84,689,253. In the following table will be found the values of the outputs of twenty-four leading industries in 1905 and 1900, with the percentages of gain in the five-year period:

	1906	1901	*Per ct. increase*
Agricultural implements	$12,755,718	$9,597,389	32.9
Boots and shoes	20,264,686	18,481,216	9.7
Bread and confectionery	16,992,605	11,637,808	45.6
Butter and cheese	32,344,513	29,462,402	9.8
Car repairs	11,442,607	7,546,644	51.7
Car manufacturing	14,430,190	3,954,172	265.3

Fndy and machine shops	24,213,094	15,292,445	57.8
Hats, caps and furs	9,029,020	5,876,467	53.6
Iron and steel	9,881,385	6,912,457	42.9
Leather and manufactur'g	15,574,652	12,141,200	28.0
Log products	68,229,920	50,805,084	34.2
Lumber products	20,128,295	10,754,959	87.8
Paper	9,118 870	4,380,776	107.9
Plumbing	11,406,671	6,553,957	74.0
Printing (all kinds)	19,831,727	13,067,597	52.3
Slaughtering and packing	27,220,363	22,217,984	22.5
Smelting	28,426,328	7,082,384	301.4
Sugar refining	18,258.260	12,595,000	45.6
Tobacco and cigars	15,248,043	11,802,112	28.8
Total above	504,639,419	333,386,184	51.3
Total all products	715,035,965	481,053,373	48.6

The logging industry is, naturally enough, found to be Canada's leading industry so far as value of products is concerned, and combined with lumber products, the crude woodworking industries furnish 12 per cent. of the entire manufacturing output. Flour and grist mills come second, clothing third and butter and cheese fourth. Canada's recent progress in mineral development is testified to by the immense increase in the smelting industry, the products of which show an increase of over 300 per cent. in five years. Other large increases shown are in electric light and power, 279 per cent.; car manufacturing, 265 per cent.; electrical apparatus, 196 per cent., and paper, 108 per cent.

THE ALTON DEAL RESCINDED.

Not a little attention has been paid to the announcement made this week that the anomalous situation under which control of the Chicago & Alton Railway Company has been jointly exercised by the Rock Island Company and the Union Pacific Railroad for the past three years has been ended, and that the Rock Island interests will hereafter solely dominate that property. It will be recalled that, following the reorganization of the old Alton property by the syndicate of which Mr. E. H. Harriman was the guiding spirit, the Union Pacific acquired a large block of the preferred stock and selected a management in harmony with its own. Later on, however, the Rock Island Company acquired through purchases in the open market large holdings of both the common and the preferred stocks of the Chicago & Alton, so that at the end of the fiscal year 1906 the stocks of the company in question were distributed among the Rock Island, the Union Pacific and the public in the following proportions:

CHICAGO AND ALTON RAILROAD.

Held by	*Common*	*Preferred*	*Total*
Rock Island	$14,320,000	$4,870,000	$19,190,000
Union Pacific	....	10,343,100	10,343,100
Outside public	5,222,800	5,230,200	10,453,000
Total	19,542,800	20,443,300	39,985,100

While the Rock Island did not possess a distinct majority of the Alton stock, its holdings were so considerable that its claim for representation could not be ignored, and in 1904 a compact was entered into whereby it was agreed that the Rock Island and the Union Pacific interests should exercise control in alternate years. This is the arrangement which has now been rescinded, the official announcement being that this has been done by mutual consent. It is, however, intimated that the Rock Island management announced to the Union Pacific that, having obtained additional stock which gave it a majority of the Alton issues, it would not consider the agreement as being any longer binding. As the Rock Island needed only about $1,000,000 of additional stock to establish it in such a position, it can be readily understood that it may have bought this amount in the market at a comparatively low figure, and would thus be so situated as to make its contention valid. From the fact, however, that the Union Pacific, that is to say, Mr. Harriman, has acquiesced in the matter and will take no steps to contest the Rock Island's control, some rather interesting deductions have been made. At the time of the investigation of the Union Pacific by the Interstate Commerce Commission its relation to the Chicago & Alton was one of the points touched upon and criticised, and it is now asserted that the commission made it apparent to both the Union Pacific and the Rock Island that their agreement sharing the control of the property was contrary to law. This would, of course, readily account for the acquiescence of the Union Pacific in the abrogation of the compact.

It has been observed, however, that the developments of the present week will make comparatively little change in the western railroad situation. The Alton property was, of course, a benefit to the Union Pacific as affording a line from Kansas City, the terminus of one of its main divisions, to Chicago. As it, however, possesses a large interest in the Atchison system, the Kansas City-Chicago line of that road may be used by it for the same purpose. On the other hand, possession of the Alton is of decided benefit to the Rock Island and its subsidiary, the St. Louis & San Francisco.

NEW BUSINESS SLOWER IN ENGLISH COTTON TRADE.

Manchester, June 11.—Trade continues quiet as to new business booked by producers, and few contracts of importance have been made. Demand has been draggy. Buyers are indifferent as to entering into future engagements. The result is that order lists of manufacturers of piece goods are lighter and are smaller in bulk than at any time during the last few years. India has bought next to nothing, and China continues inactive for the most part. The nearer outlets of the continent are considered healthy, but here also not much business has been done. Our shipments in May were smaller than in May last year, but larger than in the same month of the previous year. Taking the past five months, the yardage is a little more than in the corresponding period of 1906. The greatest increase is to Egypt; next comes Turkey, and the third on the list is Brazil. On the other hand, China, Bengal and the Straits Settlements have absorbed less. A feature of interest is, that while there has been an increase this year in bleached, printed and dyed goods, there has been a falling away in gray or unbleached cloth. The following table of cloth exports, in yards, is of interest:

	May	*Five months ended May 31*
1907	537,578,600	2,691,106,500
1906	574,495,300	2,670,363,600
1905	501,366,700	2,502,204,620

Lancashire manufacturers who use bought yarn are experiencing a narrow margin. To buy yarn and sell cloth to-day means, in many cases, a slight loss. The market at the moment is dislocated by the state of the raw material position. Cotton is very high, and as a result yarn spinners are holding for full rates. Consequently, cloth quotations are out of reach of shippers. The tendency is for looms to stand idle here and there, and also for annual weaving holidays to be extended. In the Burnley district there are about 80,000 looms, and the fortnight's stoppage agreed upon means a lessened consumption of yarn to the extent of 8,000,000 pounds.

Our yarn shipments keep up wonderfully well, May being a big month, as will be seen from the table below, figures being in pounds:

	May	*Five months ended May 31*
1907	22,259,000	95,161,200
1906	17,976,500	90,244,900
1905	17,795,400	82,564,600

Comparing with 1903, we exported last month more than double the weight of four years ago. The figures for the five months show that the continent has taken very largely of yarn, notably Germany, Russia, Holland and Austria. China, too, has done fairly well. There has been a marked falling off in India and Japan.

Our spinners of American yarns, owing to consumption being fully equal to the production, have kept prices well up, and the margin of profit continues to be wide and remunerative. The sales, however, during the last month have not been large. Many things at the moment seem to be tending in the direction of an adjustment in prices of yarn and cloth. There will probably be a decided lessening of consumption of twist and weft during the summer, while at the same time the new mills will bring fresh yarn upon the market. Yarn, it may be said, has seen its best for a time. Spinners for export are deeply sold, but they are not getting much new business just now. Yarns made from Egyptian cotton are very busy in combed counts, some firms being engaged for several months ahead.

Our home cotton-goods trade is busy, but in fancy and light cloths, cold weather restricts distribution. The retail shops have not been able to do much business.

The operative spinners and card-room hands have just had conceded to them a rise in wages to the extent of 5 per cent. Wage questions in our trade are now settled for at least twelve months to come. No further advance or alteration can be made in spinning wages for a year, as provided for under the terms of the Brooklands agreement. The proposed conciliation scheme to adjust wages according to the state of trade is nearly ready for a trial, and it is said that a provisional arrangement has been made between the employers and the workpeople's officials to see how a tentative scheme will work.

Our spinners of American cotton are concerned as to the new American cotton crop. The feeling is that damage has been done to some extent, and the next twelve months are looked forward to with some little anxiety. If the yield be a comparatively small one there is sure to be a cotton famine in Lancashire. T.

EDITORIAL NOTE.

In the early part of the present week the stockholders of Adams Express Company received notice from its management that they would be given a bonus of 200 per cent. upon their holdings, in the form of a distribution of new 4 per cent. collateral trust bonds. The latter will be in the amount of $24,000,000, secured by the deposit of bonds and stocks which are owned by the company, the income from which, it is stated, is more than sufficient to pay the interest upon them. This, it is expected, will not interfere at all with the continuance of the 8 per cent. per annum dividends now being paid upon the $12,000,000 of capital stock of the company, which, it should be noted, is not a corporation in the ordinary sense, but a voluntary association, or practically a kind of partnership, in which the holders of the stock are personally responsible for its liabilities. It will be recalled that in 1898 the Adams Express Company made a similar distribution of $12,000,000 of 4 per cent. collateral trust debentures, this scrip dividend being to the amount of 100 per cent. upon the stock. A good deal of comment is naturally created by this unexpected action. It was known that the company's dividends by no means represented the full extent of its earnings, but as no reports have been published by its management, the fact that it had accumulated such an enormous surplus invested in securities was more or less of a surprise. It might also be remarked that in some quarters there is a disposition to consider the action just adopted as having been to some extent due to the fact that under the legislation adopted by the late Congress, express organizations are, for the first time, placed under the jurisdiction of the Interstate Commerce Commission, and will hereafter be obliged to render full reports of their operations and finances to that body.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Lease—Receipt—Forfeiture—Condition.

The receipt of rent by that name, accruing after the occurrence of causes of forfeiture, under the terms of a lease for a definite term, to the knowledge of the lessor, bars his right of entry for condition broken, according to the decision of the Supreme Court of Minnesota in the case of Kenny vs. Sen Si Lun et al.

Evidence—Documents—Carbon Copies.

The Supreme Court of Minnesota held, in the case of International Harvester Company of America vs. Elfstrom, that the different numbers or impressions of a writing produced by placing carbon paper between sheets of paper and writing upon the exposed surface are duplicate originals, and that either may be introduced in evidence without accounting for the non-production of the other.

Title Insurance—Company's Liability.

The Supreme Court of Pennsylvania held, in the case of Foehrenbach vs. German-American Title & Trust Company, that where one in possession of land and claiming a title in fee simple applied in good faith to a title insurance company which issued to him a policy, and thereafter it was decided in partition proceedings that he had only a half interest in the land, and the insured because thereof voluntarily surrendered the premises to a purchaser at the judicial sale, he might recover from the company, and that it could not claim that as he never had title to the half interest he suffered no loss.

Agent—Corporation—Liability—Stock.

The Supreme Court of Louisiana held, in the case of Rogers vs. Southern Fibre Company et al., that where an agent is known to be acting for himself, his act cannot possibly bind his principal, and that where the president and local agent of a foreign corporation, in a transaction for his own individual account, delivered bogus stock instead of the genuine stock of his company, the company was not liable. The court said that it made no difference that although knowing the officer to be untrustworthy the company had continued him in his trust, and had continued to confide to him its blank certificates of stock and its seal and thus had held him out to the public to be trustworthy.

Railroad—Shipper—Published Rate.

The Kentucky Court of Appeals held, in the case of Corcoran vs. Louisville & Nashville Railroad Company, that when, in accordance with the requirements of the federal statutes, a railroad company published the rate for interstate traffic from two designated points in the state and filed the rate with the Interstate Commerce Commission and the State Railroad Commission, this was notice to all the world that it held itself out as a common carrier of interstate commerce at the published rate, and that the initial carrier having this published rate before it, the shipper was bound thereby, though such rate might be in conflict with the local rate between the two points as fixed by the railroad commission of the state.

Insolvent—Assignment—Creditors.

The Kentucky Court of Appeals held, in the case of Commonwealth et al. vs. Scoville et al., that an assignee of an insolvent debtor who administered the estate to the detriment and loss of the creditors and for the sole benefit of the assignor would not be heard in a court of equity, in an action against the assignor, to say that he paid out in the settlement more than the amount of assets that came to his hands, or be allowed to recover against the assignor, who was a participant in the management of the estate. The court further held that an assignor who directed and controlled the disposition of the assigned estate in a manner inimical to the best interest of his creditors, or delayed the settlement in order that he might have opportunity to make favorable adjustments with his creditors, would not be permitted to invoke the aid of the courts to assist in recovering from the assignee money alleged to be due him.

Nuisance—Factory—Smoke—Injunction.

The New York Court of Appeals held, in the case of McCarty vs. Natural Carbonic Gas Company, that an action would lie to restrain a manufacturing company from using soft coal in its factory when the use was found to be unreasonable, causing much discomfort and some financial loss to the plaintiff in his adjacent residence in consequence of the volume of smoke emitted from the chimneys. It appeared that the plaintiff's residence was situated in a village in a country district 840 feet from the defendant's factory; that the latter burned from two and one-half to four tons of soft coal daily, and that from its stacks, which were ninety feet high, there was emitted heavy black smoke, which when the wind was in a certain direction enveloped the plaintiff's house, discoloring it and causing annoyance and discomfort to the inmates. It further appeared that the plaintiff owned his house before the defendant's factory was erected, and that another factory similar to that of the defendant was located in the neighborhood which caused no annoyance. It was found that the use of soft coal by the defendant was not necessary to the practical management of its plant, although a change to hard coal would entail some additional expense, and that the existing management of the plant in that respect was not a reasonable one. The court held that the facts sustained a conclusion of law that the defendant should be enjoined from continuing the conditions referred to.

Contract—Sale—Performance—Waiver.

The Supreme Court of Indiana held, in the recent case of Ohio Valley Buggy Company vs. Anderson Forging Company, that in an action at law to recover damages for breach of a contract of purchase and sale, time must be treated as of the essence of the contract, and that the plaintiff in the case must show a strict performance by him of a condition that he would pay for all goods furnished thereunder within sixty days, or that a waiver by the defendant must be shown. It was further held in this case that a purchaser of goods who agreed to order and accept them as needed, and to pay for all ordered within sixty days after receiving them, but who repeatedly failed to pay for installments received until long after the sixty days had expired, could not recover damages upon the seller's refusal to furnish any more goods, and that the fact that the seller accepted payment for one or more installments after default in payment did not waive its right to repudiate the contract for such default.

Marine Insurance—Interest—Subrogation.

The United States Circuit Court of Appeals for the Ninth Circuit held, in the case of Brown vs. Merchants' Marine Insurance Company, that where one insured had an insurable interest in property covered by, and was therefore entitled to recover on, certain marine policies on disbursements and for increased value insured against total loss only, warranted free from average and salvage charges and containing a policy proof of interest clause, the insurers having paid as for a total loss were entitled to share with other insurers in the distribution of a fund recovered as the result of a proceeding to fix liability for a collision in which the vessel insured was lost. The court further held that subrogation as between the insurers resulted by operation of law from the mere fact of payment and did not depend upon the voluntary act of the insured, and that in an action by one insurance company against the others interested in a loss on a vessel, to share in the amount received in an action for the injuries received by the vessel, it was no ground for discrimination against the interveners that the policies which they issued covered disbursements.

Insurance—Agency—Revocation—Notice.

The Supreme Court of Ohio held, in the case of The Aetna Insurance Company vs. Stambaugh-Thompson Company, that persons dealing with one who has recently been a duly authorized and acting agent of another in the transaction of a particular line of business (in this case an insurance agent) have a right to rely upon the continuance of his authority to transact business of a similar character for his principal until they are in some way informed of the revocation of this authority. In this case an agent of an insurance company which had issued a fire policy on a stock of goods on which there was concurrent insurance prevailed upon the insured, after his authority as agent was revoked, but without knowledge of that fact on the part of the insured, to surrender the first-mentioned policy and to accept another for the same amount and on the same terms from another company for which he was agent. This the insured did in the belief that the agent still represented the first-mentioned company. The court held that the insured had a right to rely upon a continuance of the authority of the agent to represent the first-mentioned company; that the delivery of the policy to him for cancellation bound the company, and that the agent being duly authorized to solicit insurance by the second company, and having delivered its duly executed policy as a substitute for the former one in the first-mentioned company, the second company was liable thereon.

BUSINESS NOTES.

British Railway Returns.

At the end of 1906 the capitalization of British railways stood at £1,287,375,000, as against £1,272,600,935 at the end of 1905. The length of line open for traffic at the end of 1906 was 23,074 miles, which compares with 22,847 in 1905 and 22,634 miles in 1904. The financial results in 1906, 1905 and 1904 are shown in the following:

	1906	1905	1904
Gross receipts	£117,242,000	£113,588,099	£111,890,464
Working expenses	72,837,000	70,121,743	69,229,723
Net	44,405,000	43,466,356	42,660,741

Thus gross receipts increased 3.2 per cent. over 1905, while operating expenses advanced 3.8 per cent. and net receipts 2.1 per cent. Turning to the details for the year, we obtain the following:

	1906	1905	1904
Passenger traffic	£49,882,000	£48,720,120	£48,387,617
Goods traffic	58,393,000	56,411,589	55,400,052
Steamboats and miscellaneous	8,967,006	8,456,390	8,102,795

Effect of Shortage of Cotton.

"Shortage of the cotton crop is quite as much a calamity as shortage of the wheat or corn crop," says the New York *Journal of Commerce*. "It may not be felt so much by the original producer or the export trade, but it is felt more by other industries and a large class of consumers. Its general effect upon industrial and commercial conditions is more widespread. If there is a prospect of material shortage in the American cotton crop, still more if there turns out to be an actual shortage, it will give a new impulse to the effort to develop and increase other sources of supply. This can have no immediate effect, and little in the near future, but the effort will be persisted in until there is less dependence upon the American staple. This is a reason for efforts in this country to keep up the supply and hold our ground in foreign markets. There is no danger that the demand will not keep pace with the supply for a long time to come, and we ought to be making progress in using up the home-grown material in our own mills."

Unseasonable Weather.

Prof. Alfred J. Henry, of the United States Weather Bureau at Washington, writing in a recent number of the New York *Independent* of May 30, on the "Unseasonable Spring of 1907," after describing the conditions at length and in detail, says: "The weather that is experienced from day to day is the result of the development and movement of systems of circulating winds, in which relatively warm southerly winds are followed by colder northerly winds. The first named are productive of precipitation; the last named are favorable for fair weather. The development of these systems of whirling winds is irregular and their movement is uncertain. If they should develop in the southern part of the United States or move to that part of the country from the northern Rocky mountain region, the opportunity for an unobstructed flow of northerly winds is afforded. It is obvious that the character of a season, whether warm or cold, depends upon the prevailing winds. If these are from a northerly quarter, as is the case when the center of the opposing wind systems is in the south, then the season will be cold and backward. The reason for the long-continued drift of cold air from the northwest is not known."

Population and the Tropics.

"Colonel Gorgas, in his recent address before the Medical School at Cornell, ventured the opinion that with the continued triumph of sanitation over tropical diseases the centers of wealth and population will within a few centuries be transferred to regions within the tropics now but sparsely inhabited. Some newspaper comments on Colonel Gorgas's prediction seem to have been made on the assumption that white races will not resort to tropical countries as home seekers," says the Boston *Transcript*. "Such an assumption is not borne out by the data of European immigration to South America, all of which is by no means limited to the regions of the south temperate zone. The greater part of Argentina is within this zone, but there are districts in which the governing conditions are torrid. Therefore the conclusions as to climatic influences as affecting immigration are not readily to be deduced from the mere fact that in the last fifty years Argentina has received a net addition to its population of about 2,000,000 from Europe. Last year there were 252,536 immigrants registered at Argentine ports, of whom more than 50 per cent. were Italians. Ten years ago the foreign-born were more than 20 per cent. of the Argentine population, the Italians leading with 492,636, the Spaniards coming second with 198,685. Argentina must be a warm country to people born in Russia, yet the Russians now constitute an appreciable element of its immigration. Brazil certainly is torrid enough to suit those who love high temperatures, and while its immigration has not attained the proportions of the Argentine influx, it is nevertheless noteworthy as evidencing the willingness of Europeans to encounter the perils of the tropics without waiting for modern sanitation to do its perfect work. In fifty years nearly 2,100,000 Europeans have settled in Brazil. Of these 1,030,000 were Italians, 465,000 Portuguese and 216,000 Spaniards. There were in the same time, 1855-1904, about 70,000 arrivals from Germany. Uruguay has also come in for a large increase of population from Europe. At the date of the latest accessible returns the foreign-born in Uruguay numbered about 200,000, or a little more than 20 per cent. of its population. As usual in this part of South America, Italy made the largest contribution to the naturalized citizenship, with Spain again a close second."

American Coal Going Abroad.

Considerable demand for American coal for shipment to Italy, Portugal and the west coast of South America has developed within the fortnight. This trade is being diverted from the Welsh coal fields to domestic interests principally because of the scarcity of labor in Wales and the difficulty experienced in loading at Cardiff. Recent reports from freight brokers in New York City show that three vessels have been chartered for coal cargoes from Atlantic ports to Spezzia, one for Savona, one for Genoa and one for Lisbon. The vessels have a total net register of 10,825 tons, and on a basis of a carrying capacity of two and one-half times as much, the total shipment arranged for aggregates over 27,000 tons. Moreover, the Italian government itself, through its Ministry of Marine, has contracted for 20,000 tons of American bituminous coal for the use of its naval vessels. The contract was closed this week by a board of officers sent over for the purpose of making experiments. They visited the West Virginia fields and, according to reports, found the coal entirely suited to the uses for which it is intended. A constantly growing business is expected from Italy. In addition to the foregoing, three vessels have been chartered to carry coal to the west coast of South America. They are the Austriana, Carl and Reigate, with a gross carrying capacity of about 20,000 tons. The Ocean Monarch has been chartered also to carry a cargo of George's Creek Cumberland coal, smithy and steam sizes, from Baltimore to Yokohama, Japan.

Traffic on the Great Lakes.

The record of traffic through the "Soo" canal tends steadily upward. "The figures have long been a source of wonder to the business world, and speculation as to the ultimate magnitude of the commerce mounts to aggregates that would have been deemed fabulous twenty-five years ago," says the Milwaukee *Evening Wisconsin*. "The tonnage for May was nearly 8,000,000, exceeding that of the same month of 1906 by over 2,500,000 tons. These figures are attained only by the maintenance of a movement of vessels that is as uninterrupted as the working of a clock. An idea of the gait at which development is proceeding on the Great Lakes, especially in the iron-ore trade, may be gained from the extent of the contemplated harbor plans in connection with the founding of Gary, Ind., the new steel port at the head of Lake Michigan. This scheme recalls Russia's construction of the port of Dalny. It embraces not only the creation of a harbor but also the digging of a series of canals 250 feet wide in the trunks and 200 feet in the slips, and having a depth of twenty-four feet. This ambitious scheme would require about $10,000,000, but the construction of the canals is feasible, as the country is level and sandy. With a harbor of twenty-four feet, and inside channels to match, Gary would be in position to receive tremendous cargoes. There are no interlake channels between Escanaba and Gary, and vessels can load deeper than for service between the lakes. The largest cargo ever carried on the lakes—13,333 tons—was taken from Escanaba to South Chicago by the steamer Henry H. Rogers, which when carrying the great burden drew twenty-one feet forward and twenty-one feet three inches aft. With twenty-four feet available at the terminals the record in this service would soon exceed 15,000 tons."

CURRENT BUSINESS NEWS.

Commercial.

The reports of the Ministry of Agriculture on the condition of the French crops May 15 show the usual acreage, the wheat crop being 7,292,139 hectares, of which 6,347,014 is winter wheat, compared with a total of 6,479,096 hectares last year. Although there has been a slight deterioration since February, the bulk of the wheat crop is in better condition than May 15, 1906, the winter wheat averaging 72 9, against 68.3.

Peanuts are beginning to form an appreciable and rapidly growing item in the foreign commerce of the United States, especially in the import trade. Despite the fact that the United States produces probably 12,000,000 bushels of peanuts per annum, its exportations have been in such inconsiderable quantities that the Bureau of Statistics has only recently found it necessary to include peanuts in its list of articles exported. Meantime the imports have also rapidly increased, and the total foreign commerce in this article in the year about to end will aggregate nearly $1,000,000, the imports having grown in value from less than $6,000 in the year 1900 to about $500,000 in the present year, while exports for the year will approximate about $300,000.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—Weather unfavorable and having a tendency to lower crop prospects, which were indicated last week to be below those of last year. France—Outlook good, but in the center and north the crops are two weeks late. Supplies are sufficient for immediate requirements. Germany—Favorable weather has improved crop prospects. Mr. Broomhall has personally inspected three large farms in the province of Saxony, and the winter wheat, where not replowed, shows a healthy condition, but patchy and three weeks late. Rye shows a very thin growth. The spring crops are satisfactory. The situation, however, is critical, due to light stocks, and any further unseasonable weather would be likely to cause a scare. These opinions are indorsed by the millers who attended the millers' convention at Leipsic. The weather is now cool. Hungary — Some improvement, but estimates of yield are still very low. Roumania and Bulgaria — Winter wheat shows some improvement, and the outlook for spring crops is favorable. Russia—Outlook for winter wheat in the southwest shows a moderate improvement; elsewhere fair. Spring crops are favorable. Italy, Spain and North Africa—Outlook continues fair. India—The monsoon has burst, which is beneficial for the wheat crop. Australia—Weather is good.

The quantity of lumber cut in 1906 in the state of Missouri increased 40 per cent. over that of 1905. The leading articles are classified below according to the census statement:

	1906	1905
Lumber, 1,000 feet	507,084	362,217
Lath, 1,000 feet	29,040	20,009
Shingles, 1,000 feet	37,884	10,650

This increase represents a volume of building operations for which prosperity in town and country during 1906 is largely responsible.

Recently estimates as to the probable shortage of wheat in Europe have been raised, in many instances as much as 50,000,000 bushels, so that it is safe to say that the falling off in production as compared with last year will amount to more than 200,000,000 bushels, and one authority places the loss as high as 280,000,000 bushels.

The Weather Bureau on Tuesday gave out the following summary of the past week's conditions in the crop country of the United States: "Temperatures in the week ended June 17 were highly favorable in the Missouri valley and were generally favorable in the southern states, but in the Atlantic coast districts, northward of Georgia and the lower lake regions and upper Ohio valley, were much too low for favorable results. There was, however, a decided rise in temperature in these districts at the close of the week. Plateau regions and most of the Pacific coast states experienced very low temperatures. Frosts occurred in the lower lake region and northern part of the middle Atlantic states on June 12 and 13. Frosts and snow also occurred in the middle and northern Rocky mountain regions. Portions of the Ohio valley and south Atlantic and east gulf states suffered from local storms and heavy rainfall. The principal agricultural districts have ample moisture. Generally throughout the central valleys and southern states and in the lower lake region and New England there was abundant sunshine, but in the middle and southern Atlantic states, in the middle and northern Rocky mountain districts and on the Pacific coast there was less than the average."

Broomhall estimates India's wheat crop and exports as follows:

	Crops, quarters	*Exports subsequent 12 mos., qrs.*
1907	39,900,000	3,700,000
1906	40,200,000	3,500,000
1905	35,300,000	4,400,000
1904	45,100,000	10,200,000
1903	36,500,000	5,800,000
1902	28,500,000	2,400,000
1901	30,900,000	1,700,000
1900	23,000,000	12,000
1899	29,400,000	2,300,000

The monthly report of the United States Crop Reporter states regarding the European conditions that a considerable per cent., involving several million acres, in Germany, Austria-Hungary, practically all the Balkan states and a large portion of western Russia, were frozen out, and the land has been sown to other crops. In Germany 1,300,000 acres of wheat and 600,000 acres of rye were destroyed. Most commercial authorities compare the present situation to that of 1901. States, however, which suffered most from the winter, may with fair weather produce a fair harvest. The European wheat crop last year was 1,825,000,000 bushels, and the harvest of 1901 was 1,513,000,000. In this amount the Russian crops in Europe were 450,000,000, against 402,000,000 in 1901.

Cotton exports from the United States will aggregate nearly $500,000,000 in the fiscal year which ends this month. This total is far in excess of any preceding year. Last year cotton exports aggregated $401,000,000.

The question of how much wheat will be carried over this year on July 1 is already becoming a very important factor. Russel's circular says: "The supplies for the year which will be ended in two weeks, have been:

	Bushels
Crop	735,000,000
Old carry over	101,000,000
Total	836,000,000

Distribution has been as follows:

	Bushels
Exports (one month estimated)	150,000,000
Seed, spring and winter	75,000,000
Food, 85,000,000 people, at 5.41 bushels per capita	465,000,000
Total	690,000,000
Balance remaining in country	146,000,000

Of this total BRADSTREET'S figures show 48,000,000 bushels in storage points, while the Chicago *Trade Bulletin's* visible for June 1, including flour on both coasts, was 79,000,000 bushels. This would indicate possibilities of about 66,000,000 bushels in farmers' hands, as there is always about 10,000,000 bushels at the end of the year estimated between storage points reporting and farmers' hands. The total in farmers' hands last year was 46,0000,000 bushels."

John Claflin, head of the H. B. Claflin Company, when asked on Wednesday for his views on the business situation, made this statement: "There will be no curtailment in our purchases for the fall trade. There will probably be, however, only a slight increase in those purchases over last year, whereas a very large increase was at one time contemplated for the season of 1907-08. The unseasonable weather has retarded business in some lines, but our purchases will be ahead of what they were a year ago."

Financial.

The St. Louis & San Francisco Railroad Company is sending to its stockholders notice of a special meeting to be held in the company's office in St. Louis on August 27 to consider the following matters: An increase in the capital stock of the company from $100,000,000, the present amount, to $200,000,000, such increase to consist wholly of common stock; an increase in the bonded indebtedness of the company in the additional amount of $115,000,000, by the issue of general lien 15-20-year gold bonds limited to the above amount at any one time outstanding and bearing interest at a rate not exceeding 5 per cent. a year. Of this sum $62,816,000 are to be used for retiring other bonds.

Darwin P. Kingsley has been elected president of the New York Life Insurance Company by the new board of trustees, vice Alexander E. Orr, resigned. The trustees dropped a vice-president and reëlected vice-presidents Buckner and Weeks, also second vice-presidents Ingersoll and Perkins. Edward D. Randolph was elected treasurer and Messrs. McCall and Ballard secretaries. On Monday the candidates on the so-called administration ticket were declared elected trustees. Two of those elected on the face of the returns are dead—James H. Eckels and Ewald Fleitmann. Omitting Mr. Eckels and Mr. Fleitmann, the new electors chosen, according to the inspector's certificate, were in the order of their standing, according to votes received: David R. Francis, who received the highest number of votes; Alexander E. Orr, John G. Milburn, Robert J. Lowry, John Claflin, Clarence H. Mackay, Julius Fleischmann, Thomas P. Fowler, John E. Andrus, William B. Plunkett, Fleming H. Revell, Seth M. Milliken, John Reid, George A. Morrison, Woodbury Langdon, Henry C. Mortimer, Augustus G. Paine, Elbridge G. Snow, Anton A. Raven, Hiram R. Steele, Louis Wagner and George F. Seward.

Stockholders of the New York County National Bank have approved the plan providing for an increase of the capital of that institution from $200,000 to $500,000.

Following a conference at New York between directors of non-resident life-insurance companies, it was announced that all the larger companies will withdraw from Texas on July 11. The cause for this action is the inability of the companies to comply with the law which requires companies doing business in Texas to deposit 75 per cent. of the reserve on Texas business inside the state, and pay a tax of 1 per cent. on gross premiums collected. The companies which will withdraw are the Washington Life, Mutual Life of New York, New York Life, Northwestern Mutual, Equitable Life, Penn Mutual, Manhattan Life, Massachusetts Life and Home Life.

Postmaster-General Meyer has announced his intention to extend the postal money-order business of the department. The system has grown greatly within the last few years, until the number of orders issued exceeds 60,000,000, totaling half a billion dollars annually. The Postmaster-General has a plan which has been recommended before. He wants authority to issue notes up to the sum of $2.50, or possibly $5, without filling out an application blank, which can be indorsed as often as a bank check and can be practically used as currency, as they will be liable to pass through many hands before reaching a post office.

On Wednesday directors of the Lehigh Valley Railroad declared the regular semi-annual dividend of 2 per cent. and an extra dividend of 1 per cent. on the common stock. This is the same as was declared six months ago.

Moody's Manual for 1907, which has just appeared, is a work which investors, financiers and editors will find very valuable. The editors of this publication have made an interesting tabulation showing that there is included in its pages corporations representing $36,000,000,000 of capital. Of this more than $33,500,000,000 is in the United States, the balance being in Canada and Mexico. This total of $33,500,000,000 is several billions larger than the most recent estimate of the United States Census Bureau regarding par value capitalization of American corporate securities. The most remarkable figures of all are the totals showing the enormous amount of capital going into public-utility undertakings in recent years. Last winter the Census Bureau estimated that the electric-railway systems of the country were represented by about $2,200,000,000 of capital. The *Manual's* figures show a total nearly twice as high. The estimate of the government for electric light and power companies was $562,000,000 a few months ago. The figures in this book show a total for gas, electric light and power companies of nearly $2,000,000,000, of which more than one-half is represented by electric light and power companies.

Assistant Secretary of the Treasury Reynolds expects total collections of customs for the fiscal year to end this month will aggregate $330,000,000, an increase of 10 per cent. over last year.

Thursday's volume of business on the New York Stock Exchange—182,611 shares—was even smaller than it was on Thursday, the 13th, when sales totaled 189,491 shares, the smallest of any five-hour day in two years.

It is semi-officially announced that the Bethlehem Steel Company has sold $2,500,000 five-year 6 per cent. notes, the proceeds to be used in improving the South Bethlehem plant. It was reported that they were sold for 94½.

Announcement was made Thursday that the Fifth Avenue Bank had declared a special dividend of 150 per cent., payable out of the earnings of 1906. This is in addition to the regular quarterly disbursement of 25 per cent. Both dividends are payable July 1 to stockholders of record on June 29. The Fifth Avenue Bank has a capital of $100,000. It has paid 100 per cent. on its stock since 1891. The bank declared an extra dividend of 100 per cent. in 1903 and 120 per cent. in 1905.

Railroads.

The Erie Railroad Company has negotiated a loan of $2,000,000 for the Genesee Railroad Company, one of its subsidiaries, to complete a cut-off on which work was abandoned April 1. The company decided two weeks ago to resume the work, at which time also arrangements were made for resumption of work on the Erie and Jersey Railroad, another subsidiary on which work was discontinued in April.

According to reports the Pere Marquette Railway Company will soon be out of the receiver's hands, and the lease to the Cincinnati, Hamilton & Dayton is to be canceled, the line to be independent. The stockholders are to put up $5,000,000 in cash in return for notes. It is also said that the Cincinnati, Hamilton & Dayton will also soon be free from the receivership.

Industrial.

The *Engineering and Mining Journal* says: "It cannot be said as yet that the indications point to the Philippines as a great mining country of the future. Enough has been found, however, to show that further explorations are warranted, and that it is quite possible that a mining industry of respectable proportions may grow up in the future. For this purpose capital and intelligent direction will be needed. The former supplied, the latter can be found without difficulty. So far, however, American capital has been very slow in finding its way to the east, and little has been done to overcome the general ignorance of the possibilities there which exists at home."

The exports of structural material have been as follows:

Fiscal year	*Gross tons*
1898	30,586
1899	49,069
1900	56,265
1901	64,820
1902	61,190
1903	32,052
1904	35,892
1905	73,287
1906	97,668
1907 (10 months)	103,799
1907 (year estimated)	130,000

The tin deposits of the York region of Alaska are the subject of a brief chapter in a forthcoming report upon the development of the mineral resources of the territory in 1906, by Alfred H. Brooks of the United States Geological Survey. Considerable progress in lode mining at Cape mountain and prospecting at Lost River and at Brooks and Ear mountain was made during the year. The Buck creek tin placers also received attention, and some shipments of stream tin were made.

Miscellaneous.

The first Austrian Parliament elected on the basis of equal universal suffrage was opened Monday.

Consul-General Church Howe reports from Montreal that the Canadian immigration returns for the nine months ended March 31, 1907, show the following facts: The largest number of immigrants coming to Canada were from England, which contributed 41,658 persons to the Dominion's population. Next in order in respect to numbers were the immigrants from the United States, totaling 34,659, of whom some 2,500 were repatriated Canadians. Other figures for the various nationalities during the nine months were as follows:

Scotland	10,729
Ireland	3,404
Russian, Polish and Austrian Jews (about)	6,000
Italians	5,114
Galicians	1,652
Hungarians, Austrians, Bukowinians, etc	1,290
Hindoos	2,124
Japanese	2,042
Russians	1,927
Germans	1,889
French	1,314
Swedes	1,077
Finns	1,049
Norwegians	876
Dutch	394
Belgians	650
Greeks	545
Syrians	277
Turks	232
Spaniards	29
Negroes	108

The number of immigrants landed in the United States during the month of May was 184,886, the largest number landed in any one month in the history of the country. The increase over April amounted to 39,630, or 21 per cent., while the increase over May, 1906, was 33,959, or 18 per cent. The monthly average so far this year is 117,643, against a monthly average for 1906 of 101,307.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Long-awaited seasonable weather has further improved retail trade and crops, slightly enlarged reorder business with jobbers, and made for more confidence in the placing of orders for future delivery. In some sections, also, collections have responded in a measure to more favorable influences, but payments are still backward. Taking the wholesale trades generally, there is a rather more quiet tone perceptible, part of it due to the smaller than expected reorder business, and also to the advance of the season of midsummer quiet. There is a disposition this year, more, perhaps, than in recently preceding years, to await clearer indications of the outturn of the growing crops, and there is less assurance as to booking ahead in many lines than was noted at this time in 1906, but the trade situation proper unquestionably shows a more optimistic feeling than was possible a few weeks ago.

Clearings for the week are slightly smaller than last week, but outside of the metropolis are larger than a year ago, with few exceptions. Stock speculation is intensely dull and investment demand is light. Money is rather firmer, shipments of $17,000,000 in gold to Paris and the call for the return of government moneys deposited in the banks making for conservatism by lenders over the July 1 period of heavy disbursements. Call rates are higher on the week, and full rates are asked on time loans for any lengthy period. Grain prices have advanced, largely because of heavy overselling on the recent decline, but cotton is lower on better crop advices inducing liquidation.

Railway gross earnings still show increases over the figures for last year, but operating expenses are expanding heavily. Net earnings for April reflected an increase of over 25 per cent., but the contrast is with a period in 1906 when the strike of the coal miners temporarily curtailed the income-producing power of many railways.

Cross currents display themselves prominently in various lines. Iron production and consumption is at a record rate and finished products are very active, but the cruder forms note ease, and pig iron and billets are slightly lower, especially for distant deliveries, partly because of resales of iron, partly in sympathy with lower foreign markets, and also because of the lack of clearly defined prospects as to crop outturn. Lumber seems to be easier and interior demand is lighter, but large cities show good local demand existing. The cotton-goods line is not so urgently active as earlier, but there is no weakness, the recent spurt in retail trade at the west developing the fact that there are no surplus stocks in the hands of western jobbers, while the uncertainty as to supplies of raw material prevents any appearance of weakness. The shoe trade has been benefited by the better weather, particularly at the west, but eastern factories report demand disappointing and shipments 3 per cent. behind 1906. Ease in raw sugar and the uncertainty as to fruit-crop outturn make for present quiet in refined grades, though the consumption has been helped by seasonable weather and increased receipts of fruits. The canned-goods trade has had an immense demand for the balance of last year's production, and stocks are down to the minimum, with prices high. California dried fruits are at the highest prices of the year. Wool markets are quiet, with fine grades relatively most active, and western prices higher relatively than at eastern markets.

The clothing trade is quiet at wholesale, and it is still too early to figure on fall trade. Spring business was good, despite some cancellations by retailers. Cotton yarns are very strong at the highest prices of the year, and premiums are paid for quick deliveries. Hardware orders come in more slowly and collections drag.

Telegrams to BRADSTREET'S are unanimous in reporting an improvement in crops, and while nearly all, and notably corn and cotton, are late, much more optimism is visible as to ultimate yields. Except where injured by frost in late May, winter wheat has improved. Light and poorly filled heads are complained of in Kansas and Missouri. Spring wheat is making excellent progress in the northwest, and the green bugs reported there are said to be the ordinary grain louse and not the destructive aphis. Generally speaking, the outlook in the three spring-wheat states was never more favorable. Bug damage to oats is reported in Illinois, and oats in Kansas are a failure. Wheat harvesting is general in Kansas, Kentucky and southern Indiana, and will begin in Missouri next week. Scarcity of labor is reported in Indiana. Wheat in the Pacific northwest looks well. The hay crop is looking better than expected in the central west, and will be a large crop in California. Corn is late the country over, but has improved all around, except, possibly, in parts of the northwest where it has been too cool. Iowa crop promise, as a whole, is not equal to last year. Corn and cotton have made good progress throughout the south; hot, clear weather has allowed of the fields being cleared of grass, and while the plants are small, the stands are better than earlier anticipated. Best reports come from the south Atlantic coast states. The Louisiana sugar and rice crops are in good shape, and Georgia peaches promise better than earlier expected.

Transactions in stocks at New York are very small and the dullness is accompanied by slight receding tendencies in prices. Higher money market rates and the uncertainty of the European financial and political outlook, together with the indifference of the investing public toward securities, exercise a very restrictive influence, in spite of the improved crop outlook and the continuance of fairly good railroad traffic and general business. Foreign exchange has advanced to the highest quotations for some years, demand sterling being 4.87.30. Engagements of gold for shipment to Paris to the amount of $5,000,000, and of $1,100,000 to London, were made during the week.

The highest prices of the year in cereals were reached in the third and fourth weeks of May. Wheat on May 22 touched the highest level, $1.08⅞ for July at New York, while at Chicago, July sold at $1.03½ on May 27. This was the culmination for the time being of the excited speculative movement based upon bad domestic and foreign crop reports. Cash wheat at New York sold at $1.06½ on May 21, and at $1 at Chicago on May 22. Values were maintained at a high level thenceforward until June 10, when the government crop report, followed by reports of improvement due to better weather, started a downward movement, culminating for the time being on June 14, when quotations were just 10 cents lower than the high point reached in May. Overselling on the short side and a renewal of poor crop reports, largely from the southwest, caused a rally of 2 cents this week. The price on Friday, June 21, of cash wheat at New York was 99½ cents, which compares with the low price of the year—80 cents—reached early in January. Cash corn at New York reached its highest price on May 17, of 64½ cents, which compared with 52 cents early in January and 61 cents on June 15. From this latter level there has been a rise this week of 1½ cents. Oats rose from 39 cents in January to 50½ cents in late May, fell to 48 cents on June 12, but rallied again to 50½ cents.

Pig iron continues dull, and the tendency to lower prices, which was noted in these columns last week, has become more distinct, especially as regards spot supplies. Foreign markets are likewise lower, and there seems to be a disposition to believe that further recessions will occur over-sea. Owing to the suspension of a tide-water plant, there have been some resales of basic iron, but the unexpected supplies have been taken up quite readily, so that prices have not been affected. Eastern and western works are making better deliveries of steel, which, together with more liberal offerings, have caused some weakness in the market for billets. However, an outlet has been found in Canada. Demand for steel rails for delivery in 1908 is only fair, many contracts having been held back owing to uncertainty regarding the new specifications of the railways. Business in structural material is rather good. Independent mills are making better deliveries of plates, and some of these are displaying eagerness to get new business. In the lighter lines demand is well maintained, and buying of hoops and bands for fall delivery has begun. Some large contracts have been placed for merchant pipe. Coke is still weak. Bituminous coal is easier in the west on larger offerings, and the low-grade article is lower in the east, but coal of good quality brings high prices. Copper continues to recede, and even lower prices are looked for in some quarters. Consumers are buying for immediate needs only, and it is understood that they experience no difficulty in getting supplies. It is probable that if prices were lowered sufficiently much new business would develop.

Bank clearings for the week ending June 20 aggregate $2,559,106,000, 1.9 per cent. below last week and 10.8 per cent. under this week last year. Outside of New York exchanges amount to $1,101,273,000, 1.9 per cent. less than last week, but 10 per cent. over the week last year.

Business failures for the week ending June 20 number 165, against 161 last week, 173 in the like week of 1906, 157 in 1905, 215 in 1904 and 171 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending June 20 aggregated 2,850,222 bushels, against 3,376,962 bushels last week, 1,760,609 bushels this week last year, 975,832 bushels in 1905 and 3,860,434 bushels in 1902. For the past fifty-one weeks of the fiscal year the exports are 167,172,082 bushels, against 132,716,964 bushels in 1905-06, 61,676,099 bushels in 1904-05 and 246,549,194 bushels in 1901-02. Corn exports for the week are 988,832 bushels, against 783,455 bushels last week, 552,967 bushels a year ago and 1,119,356 bushels in 1905. For the fiscal year to date the exports are 70,520,313 bushels, against 109,380,293 bushels in 1905-06 and 77,611,666 bushels in 1904-05.

IN CANADA.

Hot weather and better crop reports have stimulated retail trade, reorder business from jobbers, and sales by wholesalers and manufacturers. Cotton goods, hardware and clothing are active at wholesale. Overproduction of lumber is noted on the British Columbia coast. Collections are better throughout the Dominion. This week has seen the completion of the first flour mill on the Canadian Pacific coast. Money is still rather scarce, and this is the cause assigned for the low prices of Canadian securities. The western wheat-crop situation looks well and the area in all Canada will about equal last year's. The crop scare has had the good effect of curtailing land speculation somewhat. Failures for the week number 13, as against 22 last week and 19 in this week a year ago. Clearings for the week aggregate $83,556,000, a decrease of 1 per cent. from last week, but a gain of 9.5 per cent. over this week a year ago.

RAPID CROP IMPROVEMENT.

FAVORABLE WEATHER QUICKENS DEVELOPMENT. WINTER-WHEAT HARVESTING BEGUN. GOOD REPORTS, EXCEPT FROM SOUTHWEST, WHERE MAY FREEZE RESULTS IN POORLY FILLED HEADS. SPRING WHEAT WELL ROOTED AND NEVER LOOKED BETTER. HAY CROPS PROMISE BETTER. CORN LATE BUT GROWING FINELY, EXCEPT IN NORTHWEST. COTTON BENEFITED BY HOT WEATHER. FIELDS CLEAN. PLANT SMALL-BUT HEALTHIER LOOKING. SUGAR AND RICE LOOK WELL. GEORGIA PEACH CROP LARGER THAN EXPECTED. TRUCK AND FRUIT CROPS DOING BETTER IN EAST AND NORTH.

CHICAGO.—Winter-wheat conditions have improved, except where wheat was badly damaged by the freeze late in May. The latter has developed light and poorly filled heads in Kansas and Missouri. Threshing returns fulfill indicated yields represented in low conditions given of late. Harvesting is progressing rapidly. Wheat in parts of northern central Illinois shows slight damage by bugs. Spring wheat is making good progress and is overcoming the recent lateness, owing to favorable weather. It is affected in southern Minnesota and South Dakota by the ordinary grain louse, which is appearing in great numbers, and while they are not believed to be destructive, they create apprehension. Parts of western North Dakota that needed rains have had them, but more is needed. Corn, although still backward, has overcome part of the unfavorable features with the help of warm, growing weather. Good progress has been made in cultivation, some fields having been worked once, and some two and three times. Stands are irregular and the crop averages one to two weeks late. Oats show irregularity in stand, are more or less short, and fields are filled with bugs through Illinois and parts of Indiana and Iowa, but no serious damage has resulted. Hay promises a better crop than was thought possible thirty days ago.

INDIANAPOLIS.—The favorable weather of the last few weeks has given quite an impetus to growing crops, and in the southern part of the state farmers are reported to be already complaining of the scarcity of hands for harvesting. In the central part of the state the green bug is reported to have put in an appearance in oats and wheat, but the extent of damage done or what they will do remains to be seen. Corn is now having rapid growth, likewise garden truck.

CINCINNATI.—Crop conditions show marked improvement and promise abundant returns.

ST. PAUL.—Crop reports are encouraging from all over North Dakota and Minnesota. Wheat and small grain and grasses have had especially favorable weather of late and being deep rooted, strong and healthy will withstand considerable dry and warm weather. Only in isolated spots has there been a surplus of moisture. The only crop which is very backward is corn; the weather has been too cold for germination in places, and cattlemen are anxiously awaiting warmer weather for this crop.

MINNEAPOLIS.—The weather this week has been all that could be desired for growing crops and the outlook was probably never more favorable at this season.

SIOUX FALLS.—Warm weather has prevailed and crop conditions have improved.

SIOUX CITY.—Small grain is doing well and corn prospects are improving. Pastures are in good condition. Potatoes are in fair shape.

DAVENPORT.—The weather has been favorable to growing crops.

DES MOINES.—Warm weather conditions and rainfalls appear favorable for grass and small grains, but yields of small grain and corn will be materially less as compared with former years.

ST. LOUIS.—The wheat crop in Missouri and Illinois shows improvement, and it is generally believed that the crop in these two states will be

almost equal to last year's. Harvesting will begin early the coming week, and it is thought the yield will prove entirely satisfactory. Corn shows improvement and is in a very satisfactory condition, although about three weeks late.

ST. JOSEPH.—Nine counties in this territory report wheat equal to last year. Other counties report 50 to 75 per cent. of last year's crop likely. Corn is two to three weeks late. Otherwise conditions are good.

KANSAS CITY.—The outlook for Kansas wheat appears somewhat brighter than heretofore. The weather has been favorable for all growing crops. Corn is gaining, but is still backward.

OMAHA.—Favorable weather has benefited all crops very materially.

RICHMOND.—The weather has been more favorable this week for growing crops, but all staple crops are late. Larger shipments of vegetables are noted from North Carolina to northern markets.

CHARLESTON, S. C.—Cotton in general is in very fair shape, and prospects for a good crop are much better than heretofore. The plant seems small but is free from grass, and farmers have good stands.

AUGUSTA.—The weather is very favorable for growing cotton. Prospects now are good for a fair cotton crop.

ATLANTA.—Cotton is improving owing to hot, fair weather. The peach crop is small but the yield is larger than was expected.

MACON.—Hot weather is improving the condition of crops.

BIRMINGHAM.—Produce is rapidly coming in from the country districts. The weather is good and farming operations are showing up better.

MONTGOMERY.—Favorable weather the past few days has proved very beneficial to cotton, which shows some improvement over last week.

MOBILE.—Favorable weather continues and the feeling is more optimistic regarding the cotton situation.

MEMPHIS.—Weather conditions are favorable. Corn and cotton are making good progress. Crops are about one month late.

LITTLE ROCK.—Practically all cotton has been chopped out. Fields are clean and well worked, and indications now point to 75 per cent. of an average crop.

NEW ORLEANS.—Weather conditions have been excellent of late, except that there is a cool night occasionally, which is not beneficial to growing crops. Cotton has improved rapidly and prospects indicate nearly an average crop. Sugar cane and rice are still making good progress.

DALLAS.—The farmers have taken advantage of the warm, dry weather during the past week, and cotton and corn show a decided improvement.

FORT WORTH.—Much improvement is noted in the condition of cotton and corn. Good weather has enabled farmers to clean fields, and good rains are now reported from the extreme western part of the state which had been suffering.

WACO.—Recent rains proved very beneficial to growing crops.

SAN FRANCISCO.—The hay crop is heavy. Prunes, raisins and peaches have reached top prices.

SPOKANE.—The wheat crop is looking well.

TRADE REPORTS.

At New York, trade in dry goods is well maintained. Wholesale houses and commission merchants say they are well sold up and that business for the year almost equals that of the corresponding period of 1906. While business in some departments has been dull, trade in others keeps up and is even ahead of 1906. Cotton goods still lead in activity, demand being large, prices firm and well maintained, and even advancing for some makes. Business in silk continues heavy at strong prices, and demand is increasing. Dress goods are fair. The special falling off this week is in underwear. Retail houses have done a very fair volume of business, the weather being more favorable. In clothing, trade is somewhat quiet. It is still early for returns on fall trade. With most, spring business has been satisfactory, though there were a good many returns and cancellations from retailers on account of backward weather. The early months of the year were very favorable, so that they are clearing out their entire heavy-weight stocks and heavy-weight spring suits, also spring overcoats, which somewhat offsets the limited business transacted in light weights. With some houses the season was not bad, as some of them sold their light-weight stock at reduced figures to department stores. Collections are good. Worsted and cotton yarns continue dear, as the demand is heavy and scarcity of goods in some lines is felt. In the cloak, suit and waist lines conditions are improving, and manufacturers look for a continued increase in business. Buyers are more numerous and collections are fair. Bnsiness in the wholesale notion line is normal, but some complaint is heard regarding collections. Button manufacturers continue busy, but high prices of materials reduce profits. Raw silk is quiet and prices show a further decline. Improved weather conditions have enabled the entire hat and millinery trades to reduce accumulated stocks, and retailers now take a more cheerful view of the situation. Business in men's furnishings continues active, but jobbers of hosiery and knit goods say there has been some falling off in sales and that collections are slow. Mills using rags and shoddy find little demand for their output. Wholesale grocers continue to report poor business. Receipts of butter exceed demand and the surplus is being stored. There has been a fractional fall in price of cheese. Eggs continue to be stored. Jobbers of flour buy for immediate needs only. Receipts of live stock and dressed meats show an increase. The market is active and the advance in price has not interfered with consumption. Business in American hemp twine is good; prices are steady, and in some quarters no high-grade hemp is left on the market. New orders for cotton cordage are only taken subject to delay in delivery, manufacturers being oversold. In the hardware trade new orders are coming in slowly and collections are still difficult. Prices of cutlery, china, glassware, tin and enameled ware and woodenware are unchanged. Pig iron is lower. Pig tin is scarce and price of spot has advanced. Real estate is quiet. Sales of suburban property are not equal to those of other years. Buyers appear to be purchasing for building for their own use and investment rather than for speculation. Prices of plumbers' supplies are well maintained, but collections are more or less slow. In the wholesale paper trade, prices for all grades are firm, with an upward tendency.

The following telegrams show trade conditions at the cities mentioned for the week ending June 21:

BOSTON.—Cotton goods prices still have an upward trend. Quotations of bleached sheetings, prints, domestics, convertibles and ducks have been advanced, and with scarcity of stocks on hand and an oversold condition of mills, the market is expected to maintain this strength. Owing to the rising level of prices, some jobbers are curtailing orders for future requirements. Retail trade in light summer wear and fabrics has been stimulated this week by hot weather, and stocks of storekeepers are expected to be reduced considerably. The feature of the leather market is the fact that desirable grades of sole leather are so closely sold up that there is practically no stock for immediate delivery. The heavier upper leathers are moving in fair volume, but, as a rule, shoe manufacturers who consume this class of leather have on hand less orders than usual at this time of year. As a whole, the leather and shoe market is quiet, and changes in prices and conditions are small. The movement in chemicals is of fairly good proportions, with no important price changes. Trade of wholesale druggists is favorably affected by seasonable weather. Some little improvement in demand for dyes and tanning materials is noted, although, in general, orders continue to be restricted to present needs. The volume of spring business in carpets, upholstery and furniture has not been so large as anticipated, and retail dealers are carrying larger stocks than usual; collections are slow, and as the season is now so far advanced, it is believed that trade conditions will show little improvement until fall. In lumber, prices remain firm and stocks in good supply. Demand in all lines is fair. In coal, business is slaking up some, weather conditions being milder. Paints and oils and building materials, such as bricks, cement, etc., are quite active, with no marked change in prices. Structural steel is active, some large contracts being in prospect. Wholesale liquor dealers report a good trade during the past week. There is a fair demand for rectified whiskies and also for light wines. Leaf tobacco is rather quiet and demand is not very brisk. Manufacturers are having a rather quiet trade at present. Confectioners are not very busy, but trade conditions are satisfactory. Trade in produce with summer resorts has been below the average.

PROVIDENCE.—The warm weather of the past week has had a favorable effect on retail trade; collections are slow. Machinery and tool trades hold firm. In cotton goods the market shows a strong demand.

PORTLAND, ME.—Owing to more seasonable weather summer travel has materially increased as has retail trade in both country and city. Jobbers are reporting more demand for supplies, particularly dry goods, furnishings, provisions and groceries.

PHILADELPHIA.—Wool is inactive and growers are holding for high prices, which manufacturers and dealers are slow to pay unless actually in need of wool. Manufacturers, as a rule, are busy, though in a number of instances are not running all their machinery, more from lack of labor than from lack of business. Retail and jobbing dry-goods trade feels the effect of past unseasonable weather, spring business has not been up to expectations and collections are draggy. Flour is dull and a trifle easier. Chemicals and dyestuffs continue in good demand, though high prices check consumption to some extent. Paints and glass are in active request and the market rules strong and firm, though there is some complaint about slow collections. Lumbermen say wholesale trade is rather quiet, but retailers report an active demand for jobbing; the volume of business, however, is not quite up to expectations. Goatskins show a slight falling off in price, with demand slow. Leather shows a fair volume of business, full supplies and no appreciable decline in prices. Shoe men report improved business, with demand largely in tans and white goods. Tobacco sales are lighter and for present wants; factories are not so busy, and as they are approaching two months that are usually dull, are not buying ahead. Sumatra and Havana prices are higher than dealers feel able to give, and collections are only fair. With orders on their books sufficient to occupy their plants for the remainder of the year, buying is not so active in iron as it was, and while prices remain unchanged, the premium on immediate deliveries is not so high. Gas coal and coal of high grade command good prices. The lower grades have fallen off somewhat in demand and price, but an improved condition is looked for, it being pointed out that the New England market delayed buying owing to high freight and must sooner or later supply the deficiency.

PITTSBURGH.—The pig-iron market is quiet and easier. There have been exchanges of pig iron for low phosphorus and ingot mold scrap, but the prices entering into these trades are understood to be about prevailing quotations. Inquiry is still light. The situation as regards prices may be described as nominal, but quotations are 50 cents off on some grades. Coke continues weak, and unless the rate of production is interfered with, will show no improvement this summer. Valley furnace quotations for pig iron for immediate delivery are nominally as follows: Standard Bessemer, $23.50; chilled basic, $23.50; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2, and foundry coke, $3 to $3.25.

BUFFALO.—Retail trade shows considerable improvement, owing to favorable weather. Collections are fairly good, and prospects for a continuance of a steady trade are good.

BALTIMORE.—Retail trade shows signs of improvement, owing to clear and seasonable weather, and business in that line is more active. Fall order business in manufacturing and wholesale lines is satisfactory, but immediate business continues of small volume because of full stocks in hands of retailers. Collections in general are still disappointing and, as a rule, are below normal for this period of the year. Improvement is looked for, however, with good weather. Dry goods and notions are quiet. New business in harness and brushes is of fair volume, manufacturers being well employed. Paper at wholesale is quiet. Fertilizers are quiet, with an upward tendency in prices of raw materials. In groceries business is normal, except that canned goods are in demand at rising prices. Oils and turpentines are steady. Leaf tobacco is active. Trading in lumber is fairly active, with demand for certain grades. Building material is in fair demand, with sales slightly under this period last year. Business in drugs at wholesale is brisk.

CINCINNATI.—Business shows a slight falling off. Manufacturers say they have an abundance of orders, but prices have sagged in some important lines. The supply of money has materially increased, but call loans are firmer.

CHICAGO.—Warmer weather has improved retail trade and brought in more orders for summer dry goods from interior distributers. Cotton goods are firmly held, with no surplus offerings in the hands of western jobbers. Purchases of steel rails and structural material continue of good volume. Sheets are selling moderately. Pig iron is quiet, but northern irons are held firmly. Bituminous coal is weaker on larger offerings. Lumbermen are having a lighter trade with the interior, but local business is heavy. Orders for groceries are fair, but other lines are quiet. Prices of butter, eggs and other lines of produce show little change, except that potatoes are lower on increased receipts. Cattle sold up to $7 for fancy steers, and sheep and hogs are also higher. Receipts of all live stock have decreased. Money is steady, with demand for loans lighter. Commercial paper is in good supply. Collections are fair.

INDIANAPOLIS. — Wholesale trade continues good, while retail is improving.

TERRE HAUTE.—The usual gradual falling off of retail trade at this season of the year is evident, particularly in provisions. Dry-goods and clothing dealers report only moderate progress. Trade conditions as a whole, however, are slightly improved. Recent favorable weather has done much toward encouraging packers of canned goods.

ST. LOUIS.—General conditions with manufacturers and jobbers of dry goods and shoes are very much improved. Warm weather has stimulated retail trade, and this has naturally caused an increase in orders from jobbers for immediate shipment. This improvement also covers millinery, hats and kindred lines. However, there is no marked improvement in the situation as regards hardware and building materials. Collections are good, considering the recent adverse weather.

KANSAS CITY. — A general improvement is shown in retail business. Jobbers in dry goods and kindred lines report a healthy gain in bookings for fall delivery. Trade in drugs, groceries and provisions is good. Collections have improved.

MILWAUKEE.—Trade conditions continue to improve with favorable weather. Collections are fair.

SIOUX CITY.—Warmer weather has improved all lines of trade. Collections are fair.

DAVENPORT.—Retail trade has improved greatly the past week, due to seasonable weather, but collections are slow.

ST. PAUL.—All lines are doing well and sales exceed last year's. Collections have been quite good of late and nearly keep pace with the large business outstanding.

MINNEAPOLIS. — Trade conditions are very healthy, the weather being sufficiently seasonable to make general business very good in all lines. Manufacturers of wood and iron are busy. Lumber is more quiet than a few weeks ago, but the demand is fully equal to the supply. Flour is quiet, with no particular improvement expected before the new crop of wheat moves.

OMAHA.—Trade has improved considerably, owing to seasonable weather. Collections are only fair.

LINCOLN. — Trade shows fair improvement. Collections are better.

CHARLESTON.—Trade, wholesale and retail, is good, but collections are slow.

RICHMOND.—Wholesale dealers in dry goods are taking orders for fall shipment, but the season is not far enough advanced to indicate the comparative volume of business. Filling-in orders have been light. Retail trade shows slight improvement. Collections continue backward.

AUGUSTA.—Trade and collections continue fair.

ATLANTA.—Orders for fall are coming in fairly well. Retail trade is good for the season. Collections are fair.

MACON.—Trade is dull.

JACKSONVILLE.—A falling off in lumber orders is noted, attended by a considerable drop in prices. Naval stores continue so high-priced as to afford good profits, notwithstanding the increased cost of production. Trade reflects the approach of vacation time. Collections are draggy.

BIRMINGHAM.—Southern foundry No. 2 pig iron is not quite so strong. Spot is quoted at $23, but future delivery is a little weak. Trade in general is good, with fair collections.

MOBILE.—Fair business is being done by local jobbers for future delivery, but collections are poor. Retail trade is inactive. Prices of timber and lumber have improved slightly, but several mills have shut down on account of low prices.

MONTGOMERY.—Seasonable weather is helping trade, and jobbers and retailers report an increase over last week. Collections are very slow.

CHATTANOOGA.—Trade conditions are fairly good. Collections are about the average.

MEMPHIS.—Trade, wholesale and retail, is fair, but collections are slow.

NASHVILLE.—All lines report improved business. Retail trade is good.

LITTLE ROCK.—Wholesale and retail business has steadily improved the past three weeks, owing to more seasonable weather. Although the volume of immediate shipments is not large, considerable future business is being booked. Collections are also improving.

NEW ORLEANS.—Many retail merchants have been reducing stocks, but the general trade now report a good volume of seasonable business. Jobbers are fairly active and the outlook is quite good.

FORT WORTH.—Trade is fairly active.

DALLAS.—Trade continues quiet. Collections are slow.

WACO.—All trade is very quiet and there is much complaint regarding collections.

SAN FRANCISCO.—Seasonable dullness is accentuated by continued unfavorable conditions. Lower prices for building materials have accelerated reconstruction work.

SEATTLE.—The arrival of Alaskan steamers gives an impetus to business generally and keeps jobbers busy with orders for that territory. The recent closing down of logging camps and falling off in demand for lumber from San Francisco is creating a little depression in lumbering sections at Seattle; however, trade keeps up well. Money is still a little tight, as a result of overspeculation in real estate.

SPOKANE.—Demand for laborers continues ahead of supply. Wholesalers report business good. Collections are fair.

TACOMA.—Conditions appear favorable for a continuance of present satisfactory business. Building is active.

PORTLAND, ORE.—Business in all lines continues brisk, except in lumber, the demand for which is not so good, owing to unsatisfactory conditions in California. Collections are good.

TORONTO.—Better weather has increased the retail movement, and wholesalers report an improved reorder business. Wholesale buyers of dry goods are reported covering themselves as far as possible ahead into 1908. Cottons and linens are firm. Silks are moving upward and orders are already placed for this time next year. Trade in high-class ready-made clothing is better than it has ever been at this time of the year. The movement in groceries is active. The movement of canned goods is now heavy and prices are firm. Money is showing a slightly easier tone. Collections are also improving. The outlook for Ontario crops is reported as satisfactory. Grain is about a month late, but it is now growing well and prospects favor a good yield. The fruit harvest promises well. Flour is firm in sympathy with wheat.

MONTREAL.—General trade here has shown considerable improvement. Hot weather seems to have set in, and retail trade has reaped the advantage. Summer lines of dry goods are now reported to be moving well. Orders for fall business continue heavy. Cottons and threads hold very firm, and some grades of the latter are quoted at an advance. Hardware continues exceedingly active. There is also a good business in groceries. There is now a heavy movement of freight at this port. The amount of incoming traffic is particularly large. Export business continues light. Collections from almost all parts of Canada are showing some improvement following better conditions in retail trade. Money is still exceedingly scarce and firm. It is this factor that has to a very large extent kept prices for Canadian securities at the low figures which have been ruling for some months. Receipts of butter are not heavy, while domestic demand is quite brisk. Exports are very light as compared to those of previous years. Cheese exports are also light. Hides are dull, and wool is firm, with good prices offering for the new clip.

VANCOUVER-VICTORIA.—A good, brisk trade is moving in all lines. Provincial industries are busily engaged. The lumber trade has had a good season. Last winter logs were scarce and dear, but the continued fine weather during the past month or two has resulted in a heavy cut, and prices are easier. To relieve the situation operations are to cease. This will put into the market about 2,000 men who are badly needed in other branches of industry. Immigration to this part of the country is increasing. Shipping trade is active. This month sees the completion of the first flour mill on the Canadian Pacific coast. It is expected this will mean the start of a big export trade in flour. Collections are generally good.

WINNIPEG.—The crop situation looks more cheerful as time goes on. It is now generally accepted that while the grain area in Manitoba will be lower than last year, in the provinces of Saskatchewan and Alberta the increase will be very large. It is said the crop scare of the early spring had the effect of curtailing land speculation. Wholesale and retail stocks are now moving well and travellers report a splendid outlook for fall. Collections are showing some improvement.

FINANCIAL.

Money Market.

Continued gold shipments to Paris, the engagement of $6,100,000 specie having been recorded this week, affected the New York money market, a certain amount of influence being also exercised by the coming repayment of $30,000,000 of government deposits and the preparations for the July 1 disbursement. In connection with time loans there appears to be a general disposition on the part of lenders to hold off until after the latter date, and borrowers are also waiting, in the expectation of lower interest quotations next month. Hence it results that very little business has been done at the somewhat higher rates, which are nominally quoted for all periods from sixty days to six months, or the 6 per cent. figure which is demanded for arrangements maturing in 1908. The market for call money also felt the effect and renewals ran up to 3½ per cent., although the lack of speculative business naturally makes the demand very light. In commercial paper there is also a dearth of buying, while the offerings of prime names are comparatively large.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending June 20 shows an aggregate of $2,559,106,000, as against $2,610,497,000 last week and $2,871,977,000 in the corresponding week last year. Canadian clearings for the week aggregate $83,556,000, as against $84,415,000 last week and $76,263,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	June 20	*Inc.*	*Dec.*	*June 13*

New York Banks.

Last Saturday's New York bank statement was, as expected, an unfavorable one, though the decrease of $1,465,900 in the surplus reserves of the Clearing House institutions was not a severe one. The loss in cash of $2,683,200 was, however, about $1,000,000 greater than the estimated actual decrease, which fact was accounted for by the withdrawal of $2,000,000 gold for export on Friday. The reduction of the loans by $1,689,500 was plainly the result of stock-market liquidation, while the decrease of $4,869,200 in deposits agreed with the other changes and resulted in a reduction of $1,217,300 in the reserve required, so that the surplus fell off to the extent mentioned above. The figures of the statement compare as follows with those of the preceding week:

	June 15	*June 8*	*Changes*
Loans	$1,139,755,900	$1,141,445,400	D. $1,689,500
Specie	210,056,200	213,574,200	D. 3,518,500
Legal tenders	73,026,500	72,191,700	I. 834,800
Deposits	*$1,114,272,300	1,119,141,500	D. 4,869,200
Circulation	50,477,400	50,565,900	D. 88,500
Total reserve	283,082,700	285,765,900	D. 2,683,200
Reserve required	278,568,075	279,785,375	D. 1,217,300
Surplus reserve	4,514,525	5,980,525	D. 1,465,900

The following table shows the bank holdings on the respective dates:

	June 15, 1907	*June 16, 1906*	*June 17, 1905*
Loans	$1,139,755,900	$1,060,076,300	$1,104,860,900

Foreign Exchange.

Further sharp advances occurred this week in the rates for foreign exchange. Demand sterling, which on last Saturday was quoted at around 4.87.10, advanced on Monday to 4.87.40, which is the highest price for such bills seen in the New York market since 1896. This movement was coincident with an advance in the rate at Paris for checks on London. The supply of commercial bills continues to be small, and there was considerable demand for remittances growing out of interest and other payments due abroad on July 1, for which preparation naturally has to be made at this time. The market continued firm throughout the week, and, under the circumstances, further gold exports were inevitable. The engagements of specie at New York for shipment to Paris consisted of $1,000,000 taken on Tuesday, followed by $2,500,000 on Wednesday, while on Friday $2,600,000 was taken, the significant feature being that $1,100,000 of this sum is to be consigned to

London, the first shipment from New York to that city since December, 1904.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

June 15	*June* 17	*June* 18	*June* 19	*June* 20	*June* 21

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.85 @ 4.87.90; commercial bills, 4.83⅜ @ 4.84; francs, 5.19⅜ less 1-16 @ 5.16¼ plus 1-16; reichsmarks, 94 7-16 @ 95¼ plus 1-64.

The Bank of England's discount rate is unchanged at 4 per cent. The weekly return issued on Thursday showed a gain of £664,000 in gold, and the proportion of reserve to liability was 47.30 per cent., against 46.96 per cent. last week. In the London open market call money is 3½ @ 3¾ per cent., and discount is quoted at 3 15-16 @ 4 per cent. The Bank of France for this week reported a gain of 29,900,000 francs in gold and a reduction of 30,550,000 francs in loans. Its rate remains at 3½ per cent., the Paris market rate for discount being 3⅜ per cent. At Berlin the bank rate is 5½ per cent., and the market quotation for discount is 4⅞ per cent.

New York Securities Market.

Dullness of more than ordinary intensity has settled upon the New York stock market, transactions falling to the smallest amount of the year, while what activity there is is entirely professional in origin. Improving crop conditions and prospects seemed to receive but scanty attention, and there have been no other developments of sufficient importance to influence quotations, apart from a hardening in the money market. The latter is partially due, of course, to the continuance of gold shipments to Paris, which amounted for the week to $6,100,000, making the total exported since the movement began $17,400,000. There seems, moreover, to be no immediate prospect that the outflow of specie will cease, although Wall street seems to figure upon an improvement in the foreign financial situation after July 1. The New York money market has also been affected by the preparations to repay $30,000,000 of government deposits by the national banks, which, coming as it does with the large July 1 disbursements in the shape of interest and dividend payments, contributes to create a hardening tendency in rates for both time and call loans, although it is the general impression that the money market, while it will remain firm for the next two weeks or so, will not become stringent, and will be apt to display easier conditions soon after the beginning of July. For the time being, however, money market conditions here and abroad are calculated to discourage speculation in the stock markets, it being noted that this week witnessed another decline in the price of British consols in London. Meantime the stock market merely drifts, there having been no movements in prices of any special importance. In the early part of the week Union Pacific and Reading, which figured as the only objects of any activity, recovered on buying by the shorts. Later on, however, Reading developed weakness on the fact that no increase was made in the Jersey Central dividend rate, and also on the announcement that there would be no increase in the 4 per cent. dividends now paid on Reading common, rumors having previously been circulated that the management was inclined to take a more liberal course in that respect. Amalgamated Copper was rather unsteady and variable on statements that some of the largest consumers of copper are making representations to the principal producers of the metal with a view to securing concessions in respect to the price they are to pay for the season's supply of their raw material, and the probability that an agreement will be reached whereby a lower price for the metal will be formally established. One of the incidents was the announcement that the Chesapeake & Ohio management seeks authority to create a new $26,000,000 bond issue, although it is stated that it is only intended to issue about $6,000,000 of new securities at this time. This news, however, had a disturbing effect upon Thursday's market, the list showing rather general concessions, in spite of the fact that the trading was of the narrowest and most uninteresting description. On Friday the market was dull and manifested a disposition to ease off fractionally on further gold exports and on the unsettled conditions abroad growing out of the French political situation.

Total	7,107,500	5,155,000	4,335,000

Boston Shoe and Leather Market.

All desirable grades of sole leathers are practically sold in advance of receipt, and prices are very firm. Imperfect lots are not wanted at any price, indicating the growing tendency of manufacturers to buy only such stock as they can afford to guarantee. Heavy upper leathers are moving quietly but in fair volume. Patent and kid leathers are experiencing their quiet season. Shoe manufacturers are still disappointed at the amount of business in sight. There has been no serious discussion as to any lowering of prices, simply because it is an impossibility, with present prices of material. Shipments show up a little better this week, the figures exceeding those of the same week last year, as well as those of the previous week. The *Shoe and Leather Reporter's* figures are as follows: Last week, 101,816 cases; preceding week, 93,931; last year, 97,915; total for 1907, 2,288,506; total for 1906, 2,365,718; decrease, 77,212.

Wool Markets.

The market is quiet but firm, with staple wools, on account of the scarcity of long staple in this year's clip, selling fairly well, but medium, especially low grades, are very dull. Sales of the week have been largely scoured wools, with scattering sales in other grades. One fair-sized lot of fine and fine medium territory wool was sold at 65 cents, showing a falling off in the values of clothing wools. Scoured wools sold at 68@70 cents for fine and 64@65 cents for fine medium. Eight months' Texas went at 23@24 cents and new Arizona at 66@67 cents, the latter being well cleaned up. Pulled wools moved steadily, mostly combing grades, and there is more inquiry for B supers, especially choice white. Foreign wools are in small supply for good grade and are likely to be for some time as the next London sales will offer little suitable for this country. Fine foreign crossbreds are in demand for 50s and above, but low wools are neglected. Fine merinos are cleaned up better now than at the end of the year in ordinary seasons. The interest in primary markets centers in Montana, where shearing is in full progress, with sales at 21½@22½ cents and an occasional sale at 23 cents. In Wyoming average wool sells at 20 cents and choice at 21@22 cents. Eastern Oregon is well cleaned up. Texas is cleaned up, except the Kerrville wools, recent sales being made at 23½@25 cents for twelve months'. In the fleece sections trade is less active and mediums are neglected.

FLUCTUATIONS IN PIG-IRON PRICES.

"Since the great boom of 1899, with its lesson of the effects of very high prices, taught so roughly by the tumble in 1900, and the formation of the United States Steel Corporation in 1901, with its great steadying effect, the American iron trade has had a period of comparative steadiness in prices of finished steel products. The fluctuations from month to month have been of little moment, and there has, indeed, been but one movement of great consequence, which was the dip in prices centered in the latter part of the third quarter of 1904. But not so with pig iron," says the *Iron Trade Review*. "The fluctuations have, perhaps, been as extreme as they have been at any time in the history of the American iron trade. The greatest swing since 1901 has been the drop from August, 1902, to December, 1903, which amounted to about $10 per ton, taking the average of all grades and all districts. The next most pronounced swing was the advance from the latter part of July last to the end of December, during which five months prices for far future delivery advanced fully $5 a ton on an average, while prices for prompt iron advanced about $8 per ton. In July prices for prompt and future were about on a par; by the end of December a spread of from $2 to $3 a ton had been established, and that spread has been maintained pretty well to the present.

"There is not a great deal in the earlier history of pig-iron prices to put these performances in the shade. Going back to before the war we have a table of yearly averages of No. 1 anthracite foundry pig iron at Philadelphia. Between 1844 and 1861 the highest annual average was $36.88, in 1854, and the lowest $20 25, in 1861. The greatest swing was from a low point of $20.88, in 1850, to the $36.88, in 1854. The greater part of the movement was from $22.63, in 1852, to $36.12, in 1853. Considering, however, the very small tonnage and the high average price, this was not so great a performance. Fluctuations during the war should not be considered. Gold passed double par, and there were exigencies which took the market out of its channel. The highest price during the war was the average of $63.50, in August, 1864, although in gold this would have been but half this figure. There was a decline to $37, in May, 1868, but a large part of this was a decline in gold.

"Just prior to the panic in 1873 pig iron at central-western furnace sold at $55, and in 1878, just prior to the boom of 1879, it was selling at $18. A part of this was due to the decline in gold, which went from 112 in 1873 to par in 1878; another part was due to the general reductions in the cost of manufacture, which are made once for all, and the remaining part, not so important with these allowances, was due to fluctuation in the cost of manufacture, which will always be present, and to fluctuation in the relation between supply and demand.

"In the first three or four months of 1900 Bessemer pig iron was $24 at valley furnace and by October had declined to $17. Considering all factors, this is probably the greatest decline, due merely to market conditions, which has ever occurred since pig iron became a really important market commodity.

"It must always be borne in mind, however, that fluctuations in pig-iron prices, as they appear from comparisons of price records, do not really represent as great fluctuations in the essence of the market. A high price is always attended by heavy forward contracts; the high price would not come if consumers had not bought far ahead; the actual average of contracts on books at such a time is always considerably below the quoted price. If it were possible to compare the average prices actually received for the tonnage shipped month by month, the fluctuations would be much less extreme. Furnaces do not obtain the full benefit of the highest prices, while, on the other hand, they do not stand so fully the brunt of the lowest, because when the market is lowest they generally do not sell so far ahead. Pig iron is, however, a fluctuating commodity and is destined to continue to fluctuate probably about as much as it has in the past."

COAL ASHES AS FUEL.

"Efforts to use ashes as fuel are belated," says T. H. Reardon in the *Western Electrician*, and then proceeds to impart a knowledge of chemistry for the benefit of credulous folk who may be inclined to credit recent sensational accounts of magic fluids that will cause ashes to burn like coal. Says Mr. Reardon: "It is unfortunate that the combustible in fuel is not burned as completely as it should be, and any efforts that are directed in an intelligent way to reduce this waste to a minimum are worthy of emulation. The methods that are in vogue at the present time, and that are giving such remarkable results in the hands of the non-technical, according to the reports in the daily papers of the 'burning of ashes,' seem to be applied in a very inconsistent manner. The object is more completely to burn the combustible in the coal, and many are directing their efforts toward this end with various degree of success; but the logically correct method is to secure this result before the combustible drops through the grate and goes into the ash pan.

"It should be understood that the combustible which drops through the grate before it is burned involves a loss that is twofold in character. In the first place, we may consider the heat units which have not been evolved, owing to the fact that the combustible has not been burned; in the next place, when this residue leaves the grate it has a temperature, approximately, as great as that of the fire from which it has just separated. The time to apply the remedy is before the residue drops through the grate, as after this has occurred it involves a second handling of the material, together with the fact that this residue, if used as fuel in a second operation, must regain from some source the heat units given up to the surroundings during the time that the residue has been cooling. The combustion of fuel can be made more perfect by adopting any one or more of several expedients, always bearing in mind, however, that the results secured must be worth more than the money expended for this purpose. * * * That is simply common sense.

"The effect of using such agents as free oxygen, oxygen salts, potassium nitrate, potassium chlorate, etc., are well understood, and will not receive extended mention here. It may be worth while to consider the probable effect of salt (sodium chlorid, NaCl), oxalic acid and water—the formula which is being widely circulated by the lay press at the present time. Salt is not known to exercise any beneficial effect on hydrocarbon combustion; it is known to promote the fusion of silicates at high temperatures, and one result which has been noted already by those who have put the above formula to a rough-and-ready test is the great facility with which clinkers are formed. * * * In regard to the use of oxalic acid, this compound when heated breaks up, disengaging carbon dioxid and carbon monoxid. The carbon monoxid has a fuel value; that is, in burning it takes up another atom of oxygen; but as this gas is derived solely from the decomposition of the oxalic acid, any heat derived from this source cannot be placed to the credit of the ash pile.

"Water," Mr. Reardon goes on to say, "has no fuel value, but some coal when wet will burn better than if it were dry. The water holds finely-pulverized coal together until the mass cakes with the heat, and the steam that is formed leaves the coal porous and facilitates the passage of the flame. The advantage gained in this way more than compensates for the loss of heat which the use of the water entails." Mr. Reardon concludes:

"In the writer's opinion, the most valuable constituent in the 'ash-burning formula' is the water; that can be obtained at the least expense. The use of water in locomotive firing, and in stationary firing also, in the case of finely divided soft coal, has been practiced for a great many years, and the particular benefit which results from its use is fully demonstrated and well understood.

"The man who tries to reclaim something from the ash pile is late, very late, and he is using the pound of cure instead of the ounce of prevention. It is not intended to imply that there is no coal in the ash pile to recover, but rather to lay stress on the fact that the greater wisdom would seem to lie in the effort to keep the unburned coal from going into the ash pile instead of making such strenuous efforts to reclaim it after it has gone there."

BRITISH PRODUCTION OF OPEN-HEARTH STEEL.

The statistics of the output of open-hearth steel in Great Britain in 1906 attained record figures. This feature of the trade of that year has been strikingly apparent in every one of the leading steel-producing districts. The total output of open-hearth ingots for the year was 4,554,936 tons, being an advance of 716,864 tons on the output for the previous year, and an advance of 1,309,590 tons on the output of 1904. The greatest advance has taken place on the northeast coast, which is the great center of shipbuilding material, jointly with Scotland. In the present case, however, the northeast coast has made a greater leap than it ever did before in a single year. The primary cause of this exceptional progress was, no doubt, the great spurt that took place in shipbuilding, but this spurt was supported and enforced by an increased demand for almost every other description of soft steel, including more especially blooms and billets, of which the output in 1906 was much larger than in previous years. The output of bars has also largely increased. The bulk of the increased output went into exports, but there was also a very large increase of domestic consumption all round.

In the case of Bessemer steel, the output shows a decrease, only 1,907,000 tons of ingots having been produced, as against 1,974,000 tons in 1905. This decrease is wholly accounted for by a decline of about 1,000,000 tons in rails, due to the smaller exports of 1906. The production of rails has fallen off by 200,000 tons since 1903.

"The open-hearth process in Great Britain has now left the Bessemer far behind," says the London *Iron and Coal Trades Review*. "The output of open-hearth steel is more than twice the make of Bessemer material. The latter does not recede to any material extent, but it does not hold its own entirely and it makes no advances worth speaking of. The open-hearth process does practically the whole of the running, and so far as present appearances go it is likely to continue to do so. This is the case in most countries besides our own. In the United States both processes are making remarkable advances side by side, and it is anticipated that the total increase of American steel output by the two processes will not be less than 2,500,000 tons in 1906 alone. In Germany, which is the next largest steel-producing country, another vast stride has been made in 1906, but we are as yet without the exact details. The most encouraging feature of our own trade in 1906

has been an advance in steel production, which, although still a long way behind the greatest achievements of the United States and Germany, is enough to keep us well to the front as the third largest world producer of the material described as steel.

"It may be added that in the United States the production of Bessemer steel last year was 1,338,878 tons more than the output of the previous year. The total output of ingots and castings in 1906 was 12,275,253 tons. Although this is only an increase over 1905, it is an advance of 4,416,113 tons over the output of Bessemer steel in 1904. The American output of Bessemer steel does not keep pace with the advance in the output of the open-hearth description, and the increase under this head is expected to be at least 1,500,000 tons in 1906. That Bessemer steel is being employed in the United States for an increasing variety of purposes would seem to be made pretty clear by the fact that the output of Bessemer rails in 1906 was only 569,913 tons more than that of the previous year, so that of the total increase of 1,333,878 tons, not less than 763,965 tons must have been applied to other purposes. What those purposes were the figures so far available do not make clear, but it is probable that for a great variety of needs Bessemer metal continues to compete closely with open-hearth, despite the increasing favor so generally shown to the latter. Of the total American Bessemer rail production of 1906, only 328,036 tons were exported, so that 3,377,606 tons must have gone into domestic consumption or into stock."

NEW YORK CITY'S TRUST COMPANIES.

The New York Clearing House has published its compilation of the condition of the fifty-one trust companies in the city of New York, as shown in their official statements to the State Superintendent of Banks, under his call of June 4. Following are changes shown in the more important items of June 4, compared with February 26:

	Increase
Loans on collateral	*$23,021,500
Other loans	16,528,100
Stocks and investments	20,334,200
Deposits bearing interest	56,641,900
Due banks and trust companies	20,922,900
Due from banks and trust companies	3,220,000
Cash	36,913,500

June 4, 1907, compared with May 16, 1906:

	Increase
Loans on collateral	*$5,423,800
Other loans	22,532,200
Stocks and investments	23,445,800
Deposits bearing interest	78,840,800
Due banks and trust companies	22,336,200
Due from banks and trust companies	16,592,700
Cash	34,471,000

* Decrease.

Further comparisons follow:

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 29, 1907.

Variations in the temper and tendencies of the New York stock market have this week been decidedly marked. Beginning with a state of profound dullness, the mid-week unexpectedly developed an exhibition of activity, combined with advances in prices and the replacement of pessimism by a tone of confidence in the speculative future. Of this result the continuance of favorable crop news and indications that the outflow of gold to Europe had apparently ended for this season were the most conspicuous causes. Despite the more cheerful feelings which animated Wall street, it could hardly be said that the outside public was attracted to any extent. In fact, the share market may be deemed to have only given another exhibition of its readiness to rally in the absence of bearish selling pressure when liquidation has been in progress for a long time. The growing belief that the situation had changed completely received a rude blow on Friday, when the news came out that the bids for $29,000,000 of New York City 4 per cent. bonds amounted to only $2,500,000 in the aggregate. This disappointing result may have been due to special causes, but its effect was very unsettling, and in a speculative sense, at any rate, was construed as indicating that the inadequate supply of capital with the plethora of securities has still to be faced and overcome before any radical improvement in speculation is probable.

President Roosevelt received on Thursday the personal thanks of the Emperor of China for the remission by the United States of all the indemnity that country agreed to pay the United States, with the exception of the actual cost of the military expedition at the time of the Boxer troubles and the expense incurred in the settlement of individual claims. It is estimated that, taking into account the fact that the original payment was extended over a period of forty years at an interest of 4 per cent., the actual sum receivable under the treaty of September 7, 1901, and relinquished by the United States will amount to about $27,000,000. The Chinese Emperor recognizes in his cablegram that the President has taken the lead in a matter of international justice. It is indeed a noteworthy act that has been performed by the government of the United States, which, taking thought not of what might be exacted under the letter of the treaty, but of what would answer the purpose of essential justice, has remitted to its debtor all over and above actual expenses incurred. Our diplomacy in relation to China has certainly been in its larger aspects informed by magnanimity and far-sighted statesmanship, which, perhaps, may find meet return after many days.

It was made evident some time ago that the original Treasury estimates of the surplus for the fiscal year, which practically closes to-day, would be exceeded by a considerable amount. At the end of May the surplus amounted to over $65,000,000, which was $7,000,000 in excess of Secretary Shaw's estimate. At the close of business on Thursday the excess of receipts over expenditures amounted to over $82,700,000, and with the daily receipts heavily in excess of the expenditures, the Treasury officials looked for a surplus at the close of business to-day of about $85,000,000. This, as will be seen, represents an excess of $27,000,000 over the estimate originally made by Mr. Shaw when he was Secretary of the Treasury.

Some idea of the remarkable activity of our legislators may be gathered from statistics recently compiled by a New York City club which gives much attention to public matters. It appears that the session of the New York legislature that has just closed witnessed the introduction of over 2,500 bills, of which more than a fifth had been signed by the governor as early as the middle of the week. At that time an almost equal number—550—awaited his signature. At its first session the Fifty-ninth Congress enacted not far from 4,000 laws. Other states in the Union besides New York have also been active in a legislative way, and while it is difficult at this time to make an estimate as to the total output of the mills of the lawmakers, it is known that the general sum of the statutes passed is a large one. Indeed, some persons who have given attention to the matter conclude that the number of laws enacted in the course of the present year will not fall short of, say, 20,000. If those figures should be near the mark they would indicate that the number of statutes now passed in a year is not far from double the number enacted a half decade ago.

Cable advices announce that the Porte has sent a communication to the United States embassy at Constantinople giving satisfactory assurances regarding the last outstanding questions between the embassy and the Porte. In return, Ambassador Leishman has notified the Porte of the adhesion of the United States to the 3 per cent. customs increase, which was withheld up to receipt of the communication from the Porte. The processes of Turkish diplomacy have been tedious, and it has taken a number of years of constant effort to bring about the agreement now arrived at. The questions at issue involved changes in title deeds to American educational institutions in Turkey, the permission to erect buildings for such institutions, the grant of customs immunity at Beirut, the removal of discriminatory restrictions against the importation of American cotton-seed oil, the recognition of the American consular courts as alone competent to decide who are the legal heirs to American citizens, and the reopening of a school for orphan girls at Konia which had been arbitrarily closed by the local authorities. Of possible interest in connection with the recent settlement of these disputed questions is a report on trade conditions in Asiatic Turkey by a special agent of the Department of Commerce and Labor, who urges the establishment there of permanent sales agents of American cotton mills to compete with those of Manchester, Eng., and of Italy.

The wine growers' movement in the south of France has passed through still another phase. The firmness of the government and the flooding of the disaffected district with troops had the effect of keeping the disorder within bounds. The mutineers among the troops weakened early in the struggle and on Saturday asked for a promise of immunity in the event of their returning to their duty, and finally went back to their barracks. Since then they have been sent to Villefranche, whence they are to go to Tunis. Meanwhile the movement has lost its leader. On Sunday Marcélin Albert appeared suddenly in Paris and called on M. Clemenceau. He was admitted and had a brief interview with the Premier, in the course of which he asked for the release of his colleagues who had been arrested. M. Clemenceau declared that he could not consider such a proposal for a moment, and he took his visitor severely to task for fomenting the disturbance in the south which had resulted in the shedding of blood and the desertion of their colors by some of the troops.

M. Clemenceau allowed his strange visitor to go from his presence unmolested, advising him to place himself at the disposal of the law and to use his influence to bring his fellow-countrymen to their senses. The French Premier even lent the agitator 100 francs to help him on his way, On his return to Montpellier Albert surrendered to the authorities and was confined in the detention prison. His reception on his journey was chilly, and he was repudiated in a statement issued from their prison by his comrades of the committee of Argeilliers, who declared their accord with the idea of continuing the civil strike. A similar declaration was made by Albert, but it was demonstrated in many ways that his great temporary popularity had waned. Though the remaining heads of the movement maintain their defiant attitude, the excitement continues to subside and the peasants are returning to work in the vineyards. The bill to prevent wine frauds was passed in the Chamber of Deputies on Saturday and was taken up for consideration in the Senate on Thursday. The interest in the matter has shifted for the moment from the south to the Chamber of Deputies, where notice was given of twenty interpellations on Friday. The friends of the ministry, it may be said, are confident in the ability of its resourceful chief to resist overthrow.

Portugal is at present passing through a period of political excitement growing out of the determination of the present Premier, Señor Franco, to govern by decree in the absence of the Parliament which was dismissed in May. In this attitude the Premier has the apparent support of the King, though the latter, it is reported, did not go to the lengths suggested by the Premier, who urged the suspension of the ordinary constitutional guarantees. A journey made by the Premier to Oporto at the close of last week in the hope of securing popular indorsement for his policy was marked by demonstrations which culminated in a riot in Lisbon upon his return to that city. As a result there was considerable bloodshed in the capital, which helped to spread and intensify a growing spirit of revolt against the government. Late accounts represent King Carlos as being in perfect accord with Señor Franco, while the tide of popular feeling continues to run strongly against a government which is stigmatized as a dictatorship. All sorts of rumors are in circulation. On the one hand it is reported that martial law is likely to be proclaimed, while on the other there is talk of the King bowing before the storm to the extent of abdicating in favor of his brother, the Duke of Oporto.

PRELIMINARY WORK OF THE HAGUE CONFERENCE.

The work of The Hague Conference may be said to be now altogether in a preparatory stage. The organization of the general body into committees has afforded an opportunity for the presentation in concrete form of the proposals to be dealt with, and while the information that has thus far been permitted to emerge from the committee deliberations has been meager, something is actually becoming known as to the material laid before the separate bodies, and there are intimations as to what course is likely to be taken by the leading nations in respect to some matters of general interest.

The first of the committees of the conference, that dealing with arbitration and cognate matters, has at the suggestion of the chairman, M. Bourgeois, been divided into two sub-commissions, one on arbitration and the other on the law of prizes. At the preliminary meeting of the general committee Count von Bieberstein introduced the German proposal for the creation of an International Prize Court of Appeal, and Sir Edward Fry set forth the British plan, which, he said, did not differ materially from that of Germany. Suggestions were submitted by Señor Barra, of Mexico, and Baron d'Estournelles de Constant looking to the adoption of regulations for the conduct of arbitrations and for the formulation of treaties having that object in view. On the part of the United States, General Horace Porter introduced a proposal to prohibit the collection of debts by force until the matter has been submitted to arbitration, and only permitting the employment of force when the decision of an arbitration court has been rejected.

Other propositions were presented when the sub-committee on arbitration held its first meeting. Dr. Kriege, of Germany, who is a member of the Permanent Court of Arbitration, presented one proposition and M. de Martens, of Russia, submitted four relating to arbitration, the exact scope of which has not thus far been disclosed in detail. Sir Edward Fry, on the part of Great Britain, presented the rules of the commission which investigated the Hull incident, suggesting that these might be advantageously modified. At the meeting of the second sub-committee on the law of prizes, on Tuesday, M. Bourgeois proposed the joining of the British and German proposals for the establishment of an International Prize Court and the appointment of a committee of three, representing Germany, Great Britain and France, to draw up a set of questions to be submitted to all the members. This proposition of the chairman was adopted.

Among the proposals presented in the official documents distributed among the members of the conference and the secretaries are several dealing with the rules governing the rights of neutrals. One presented on the part of the United States by Mr. Choate provides that the private property of all citizens of signatory powers, with the exception of contraband of war, shall be exempt on the high seas or elsewhere from capture or seizure by the armed vessels or military forces of said powers, but that nothing in the rule must be taken to imply the inviolability of vessels which will attempt to enter a port blockaded by the naval forces of those powers, nor of the cargo of such vessels. A British proposal provides that in order to diminish the difficulties met by the commerce of neutral powers in case of war, the English government is ready to abandon the principle of contraband in case of war between powers which sign a convention adopting this proposition, and further agrees that the right of search will not be exercised except to prove the neutral character of commercial vessels. Great Britain further proposes that the destruction of a neutral prize by a country capturing it shall be prohibited, and that the country making the capture shall release any neutral vessel which it cannot bring before the prize court.

A proposal by France provides that the contracting powers shall agree that hostilities among them cannot begin without advanced and unequivocal notice, having either the form of a declaration of war supported by facts or the form of an ultimatum with a conditional declaration of war, and that the existence of a state of war shall be communicated to neutral powers without delay. It is of interest to note that since its introduction this proposal has elicited no small degree of opposition, particularly from nations relying on prompt mobilization, such as Germany, Japan and Great Britain. Italy also will present an amendment to the French proposition on the opening of hostilities, the government of that country not being disposed to agree to any delay between a declaration of war and the opening of hostilities. The Drago doctrine will in all likelihood be laid before the conference in an amended form. As recently revised by the Argentine representative, it provides that in the collection of public debts payment of the latter must be claimed in the ordinary courts of the debtor country, and that if the decision be against the debtor state and the latter refuses to pay, then force may be used, unless an appeal should be taken from the local courts to The Hague tribunal, whose decision against the debtor state, if unsatisfied, may be enforced by armed intervention. It is rumored that at the next general meeting of the conference the American delegates will propose the establishment of a permanent arbitration tribunal to which international disputes may be submitted with fewer obstacles than at present attend such disposition.

MAY AND ELEVEN MONTHS' TRADE IN DETAIL.

As pointed out in these columns, there were several features out of the ordinary in the May returns of foreign trade. For one thing imports gained heavily as compared with exports, making the excess in the latter over the former for the month the smallest for several years past. In addition, there was a notable gain in exports of food products but a loss in "other exports," which is explained by a sharp falling off in shipments of manufactured and partly manufactured products. The details of trade in May and the eleven months' period of the past two years are to be found in the following tables:

	Month of May.	
Imports—	1906	1907
Foodstuffs, crude, and animals	$9,994,600	$12,204,635
Foodstuffs partly manufactured	12,729,205	15,640,949
Crude materials for mfg	36,520,442	42,503,980
Manufactures for manufacturing	21,184,190	25,917,904
Mfres ready for consumption	24,112,315	29,823,270
Miscellaneous	368,445	540,659
Total	104,909,197	126,611,406
Exports—		
Foodstuffs, crude, and animals	10,525,918	14,983,652
Foodstuffs partly manufactured	26,775,959	29,412,306
Crude materials for mfg	25,980,256	27,728,555
Manufactures for manufacturing	21,953,141	20,849,226
Mfres ready for consumption	41,850,075	37,805,068
Miscellaneous	859,313	949,565
Total domestic exports	128,153,662	131,728,472
Foreign merchandise exported	2,394,725	2,981,140
Total	130,548,387	134,709,612
	Eleven mos. ending May.	
Imports—	1906	1907
Foodstuffs, crude, and animals	$124,367,551	$138,654,046
Foodstuffs partly manufactured	128,662,725	141,959,593
Crude materials for mfg	381,533,586	443,813,568
Manufactures for manufacturing	199,237,167	253,863,435
Mfres ready for consumption	283,231,196	333,483,637
Miscellaneous	8,750,150	10,236,231
Total	1,125,782,375	1,322,010,510
Exports—		
Foodstuffs, crude, and animals	169,100,031	155,477,566
Foodstuffs partly manufactured	321,524,802	317,022,657
Crude materials for mfg	472,001,414	570,250,277
Manufactures for manufacturing	206,433,228	235,156,814
Mfres ready for consumption	419,822,365	434,954,591
Miscellaneous	6,094,932	6,792,414
Total domestic exports	1,594,978,772	1,719,654,346
Foreign merchandise exported	23,851,745	23,407,143
Total	1,618,830,517	1,743,061,492

In the matter of exports in May, it is found that shipments of crude foodstuffs and animals gained 42 per cent.; exports of partly manufactured food products gained 9.2 per cent., and crude raw materials, mostly cotton, gained 6.5 per cent. On the other hand, manufactures for use in manufacturing and manufactures ready for consumption decreased 5 and 10 per cent. respectively. Every line of import trade gained in May, which is rather significant, in view of the halting tendency shown in some lines of export trade. As for the eleven months' figures, it is to be noted that imports for 1907 (fiscal year) are 17.5 per cent. larger than in the preceding year, while exports gain only 7.7 per cent. The total foreign trade for the eleven months is shown to aggregate $3,065,072,002, a gain of 11.7 per cent. over 1906, the aggregate of all trade for the first time in the country's history passing the three-billion-dollar mark. If the June total of trade proves only as large as that of June a year ago, a grand total of trade for the fiscal year of close to $3,300,000,000 is indicated. In this connection the record of imports from and exports to the various grand divisions and principal countries of the world for the eleven months' period will be found of interest:

IMPORTS FROM GRAND DIVISIONS.

	1906	1907
Europe	$580,728,171	$691,415,248

Japan	36,760,080	35,030,466

Nearly 70 per cent. of all our exports are classed as shipped to Europe, while 18 per cent. goes to North America, 7 per cent. goes to Asia and Oceania, and only 4.2 per cent. goes to South America. Just a little less than one third of our exports is reported to have been shipped to the United Kingdom. Our import trade is naturally more widely distributed, as only 52 per cent. comes from Europe, 24 per cent. from North America, 17 per cent. from Asia and 11 per cent. from South America. Of the total import trade, 17 per cent. originates in the United Kingdom.

STRIKES AND EMPLOYMENT OF LABOR

Labor has certainly enjoyed a half year of plenty. In a relative sense strikes have been few and, save in a few cases, unimportant; wages have steadily advanced, the more significant instances in this respect being the general increases accorded cotton-mill operatives in the east and railway employees in the west. These are the most important, benefiting as they did a good-sized army of employees, but there were many other lines similarly helped. In fact, one effect of the increased cost of labor is witnessed in the high prices prevailing for all forms of manufactured or semi-manufactured articles. Moreover, the movement for an eight-hour day made much progress within the half year just closing, and May Day, so called, passed without the customary number of unfavorable labor developments occurring, but the propaganda for the "closed shop" did not make noteworthy headway. Threats of disturbances were quite plentiful, the most serious being the proposed strikes of western trainmen and the dissatisfaction of telegraphers, the disaffection among the latter finally resulting in a partial cessation of work at San Francisco, while in the case of the first mentioned class of employees the trouble was forestalled by an advance in wages.

In fact, the larger part of the industrial horizon remained quite clear until along in May, when a strike of longshoremen broke out in the metropolis and vicinity, and when strikes of street-car employees, telephone operators, iron workers and others occurred in San Francisco. The first mentioned lasted for some weeks, during which the commerce of the port was considerably affected, but finally the disturbance eventuated in defeat for the men. The San Francisco incidents were more burdensome, the course of business in the city by the Golden Gate being brought almost to a standstill. Happily, however, matters are again assuming better shape. So on balance the half year was favorable in an industrial sense; better in fact than it was in 1906, when the coal miners' troubles proved to be very disturbing factors, upward of 400,000 men, as well as the earnings of many railroads, being affected. Now, while it is difficult to draw an accurate line on the number involved in strikes during the six months now ending, a fairly complete list of such occurrences shows that something over 60,000 were affected by these disturbances within the half year. If this ratio is maintained during the balance of the year the record for the full year will be an exceptionally good one, as may be readily appreciated when it is stated that about 550,000 persons struck or were locked out for one cause or another in 1906, while in 1905, a quiet year, the number

involved was about 200,000; in 1904, 400,000, and in 1903, a comparatively poor year, 650,000.

At the moment the outlook is for continued quiet. However, this situation may be changed at any time, so mutable are labor matters; in fact, attention is at present centered on the prospect of a strike of 10,000 to 15,000 blast-furnace workers, the difficulty being over the eight-hour proposition, while there may be an extension of the San Francisco telegraphers' trouble to other cities.

GOLD SHIPMENTS CHECKED.

Although $5,650,000 more gold was shipped from New York during the early portion of the present week, of which $1,000,000 went to London and the balance to Paris, the later developments seem to indicate that the outward movement of specie from this country has ended for the present. Beginning on May 27 it has, however, taken $24,800,000 of the yellow metal from New York, and in view of the apparently intense demand on the part of both Paris and London for the strengthening of their reserves, it seemed likely to result in the withdrawal of a considerably larger amount before it terminated. The developments of this week, however, included a number of factors which would all tend to check a continued drain upon the gold supplies in the United States. One of the most important of these was knowledge of the fact that the Bank of England had withdrawn the so-called "special facilities," that is to say, the allowance of interest while the specie was in transit, which it had offered to gold importers at the end of last week.

Another important element in the case was the appearance in the New York money and exchange markets of considerable amounts of what are termed finance bills offered by international bankers. In other words, it has again been found profitable to put out foreign capital in the form of loans upon securities at New York. At this portion of the year there is indeed, as a rule, a good deal of business of this character. It has, however, been delayed by uncertainty regarding the crop outlook and the prevalence of higher rates for money abroad than could be obtained in the American market. The hardening of money at New York—call loans having run up to 8 per cent. on Friday of the present week—coupled with the improved crop outlook, has been effectual in relaxing the conservatism of foreign capital, and the effects of the free offering of finance bills was at once made apparent when the foreign exchange market at New York declined from around 4.87 40 at the end of last week to below 4.86. At these figures, and in view of the withdrawal by the Bank of England of its offer to pay interest on gold in transit, gold shipments became unprofitable, and authorities on international finance seem to be unanimous in concluding that there will be no more specie shipments. At the same time it is noted that the $24,800,000 of gold which has been sent abroad from this country in the past three weeks has done much to create an improved feeling in the foreign money markets, which, coupled with the absence of trouble in the London stock market at the fortnightly settlement this week, the rise in British consols, and the easier feeling which prevails in Paris in spite of the disorders in the south of France, has had an indirect but very noticeable influence upon the position and sentiments of the loan markets on this side of the ocean.

A FEDERAL PENSION AND RETIREMENT SYSTEM.

An interesting outcome of the Keep Commission's investigation into the federal administrative system is the formulation by a sub-committee of that body of a plan to retire civil servants of the government and to establish a retirement fund out of which to pay them pensions, based on the length of their service. Under the plan the fund is to be raised by a system of assessments through the operation of which the government will ultimately be relieved of all expense. In the meantime, in order to enable clerks to take immediate advantage of the system, it is suggested that the government should provide the necessary funds until the plan becomes self-sustaining, and that assessments be withheld monthly from the pay of the clerks until the plan shall be sanctioned by Congress. The sub-committee, after giving much thought to the matter, has decided against any proposal that pensions be paid to retired employees wholly out of the Federal Treasury, and against propositions providing for a uniform deduction of a given per cent. or flat rate assessment on salaries, holding that all such would be unfair either to taxpayers or employees.

Speaking generally, it is proposed to retire employees in the federal civil service on reaching the age of seventy years. Such retirement is not to be altogether compulsory, for it is proposed that competent persons may be retained as long as they wish to remain and can render adequate service. On the other hand, in some cases it is suggested that the age of retirement be fixed at sixty or sixty-five years. The sub-committee has submitted its plan to the criticism of expert professional actuaries and has had computations made upon which some of the detailed arrangements proposed by them are based. As regards the fiscal arrangement, it is proposed to pay every employee in the civil service on retiring at the age of seventy years or upward an annuity equal to 1.5 per cent. of his salary for every year of service. The fund from which to pay this annuity is to be provided by making a deduction from the monthly salary of the employee of an amount which will be sufficient, with 4 per cent. compound interest, to purchase such an annuity at the age of seventy years. This amount is to be arrived at in accordance with accepted methods in making calculations of this kind.

In some cases, of course, it will happen that employees will leave the service before reaching the age of retirement. To meet such cases provision is to be made for the withdrawal of the employees' accumulated savings or assessments with interest. As indicated above, it is proposed that the government shall provide at the outset an amount sufficient to put the plan in immediate operation. It is proposed, however, that the sum contributed by the government to make up the purchase money for the annuity of each employee cannot be withdrawn by the employee on leaving the service before retirement, nor be taken in cash upon retirement, but will be used only for the purchase of his annuity, payable quarterly during life. Such are the general features of the plan now awaiting the judgment of the full commission. It is estimated that it will entail an expense on the government of about $725,000 in the first year of its operation, and that this expense will gradually increase until it reaches a maximum of about $1,750,000 at the end of thirty years, after which it is expected that the amount will steadily decline until finally the assessments will defray the entire cost. The plan is recommended not only upon humanitarian grounds, as affording a reasonable provision for the old age of faithful public servants, but as tending to increase the efficiency of the civil service as a whole. Somewhat similar plans have been put in operation and have worked well in local instances, and the one now proposed seems worthy at least of examination. It is reported that the President is favorably inclined toward the project and that he is likely to recommend its adoption by Congress.

THE CONSTITUTIONAL ISSUE IN ENGLAND.

A resolution which may bring to an issue the long threatened constitutional struggle between the two houses of the British Parliament was introduced in the House of Commons by the Premier, Sir Henry Campbell-Bannerman, on Monday last. This resolution provides that "in order to give effect to the will of the people as expressed by their elected representatives, it is necessary that the power of the other house to alter or reject bills passed by this house should be so restricted by law as to secure that within the limits of a single Parliament the final decision of the House of Commons shall prevail." A tentative plan for giving effect to the principle of the resolution was laid before the House by the Premier. He suggested that in case of an irreconcilable disagreement between the two houses upon a bill sent up by the House of Commons to the House of Lords there should be a conference between an equal number of members of the two houses. The committee of conference would be a small body whose proceedings would be private. A common measure of agreement would be sought which the government might be able to adopt. If a bill sent up failed to secure an agreement it might at the discretion of the government be introduced after a substantial interval, say one to six months. The bill would then pass the House of Commons under a discussion restricted to new matter. If the Lords should still decide against the measure the conference would reassemble. If no agreement should be reached the bill would be again introduced in the Commons, passed as swiftly as possible, and sent to the upper house with the intimation that unless it should be passed in the form last agreed upon it would be passed over their heads.

From the brief outline given above, outside observers will be led to conclude that the plan proposed by the Premier is a cumbrous one which would seemingly prove very dilatory in operation. This was one of the grounds upon which some of the more advanced Liberals and Laborites based their demand for the abolition of the House of Lords which they presented in an amendment to the Premier's resolution. The latter with the amendment formed the subject of one of the most earnest debates had in the House of Commons in a long time. Mr. Balfour, the leader of the opposition, spoke earnestly against the Premier's proposition, saying that the question was presented by its introduction whether in one day institutions might not be upset which it had taken centuries to rear, and which once destroyed could never be restored. He urged that, as matters stood, there could not be a deadlock in the country's administrative machine, and he warned his hearers that if the House of Lords were constituted on an elective basis it would inevitably come into conflict with the House of Commons on matters not merely of legislation but of administration. Mr. Asquith, the Chancellor of the Exchequer, in support of the resolution, declared that he was a reluctant convert to the Premier's method of dealing with a condition which had become dangerous and intolerable. The experience of recent years had, he said, convinced him that a constitutional modus vivendi between the two houses was not attainable under existing conditions. The amendment to the resolution was rejected on Wednesday by a vote of 315 to 100, and the original resolution was adopted by a vote of 432 to 147. There seems little doubt that the movement thus initiated will be pressed with energy, with what precise outcome events alone can determine. Of course the dominant political factor in the British constitutional system is, as it long has been, the House of Commons, and any developments that are likely to arise out of the present issue can scarcely result otherwise than in the further subordination of the House of Lords.

EDITORIAL NOTES.

For some time past rumor has been busy with the ultimate disposition of the Central of Georgia Railroad Company. This corporation not only covers a large part of the states of Georgia and Alabama with a network of railway lines, its total mileage amounting to some 2,000 miles, but operates from its seaboard terminus, the city of Savannah, steamship lines to New York and Boston. The company is a reorganization of the old Georgia Central Railroad & Banking Company, which in the early nineties was acquired by the Richmond Terminal Company and passed into the hands of receivers at the same time that the controlling company had to seek the protection of the courts. When the main lines of the Richmond Terminal system were reorganized as the Southern Railway it was found impracticable to include the Georgia Central in the arrangement, owing to the fact that the latter was to all intents and purposes a competitor with the Southern Railway and paralleled its system in many respects. The property was accordingly organized separately in 1895 under the title of the Central of Georgia Railroad, and although it has always been managed since that time in harmony with the Southern Railway, its management has in all respects been separate and distinct, the $5,000,000 of its capital stock remaining in the hands of the reorganization committee of the Richmond Terminal. This week has brought an important announcement to the effect that the stock has been sold to Mr. Oakleigh Thorne, of New York, and a

prominent New England capitalist, who agree to maintain the property as an independent system and to retain 60 per cent. at least of the stock for two years. The price paid for the stock is not given, but it is stated that the Southern Railway Company is to receive the net proceeds of the sale. By this arrangement it would seem that this very important southern road has been placed in independent hands, while at the same time the Southern Railway obtains a substantial sum for an equity which is for the present unproductive. Furthermore, it has been alleged that proceedings were to be brought against the Southern Railway Company by the state of Georgia to test its right to the ownership of an interest in the Georgia Central, and the present sale would therefore avoid any controversy on this point. What the purchasers intent to do with the property ultimately is a matter of not a little interest. It has been intimated that the coastwise steamship combination formed by C. W. Morse may be involved owing to the importance of the Savannah Steamship Line. A more plausible hypothesis would, however, seem to be that the Rock Island-San Francisco system would find in the Central of Georgia an advantageous outlet on the Atlantic seaboard for their lines.

Massachusetts' legislature is moving promptly to prevent any hasty consummation of the proposed merger of the Boston & Maine Railroad with the New York, New Haven & Hartford Railroad Company. This week has witnessed the unanimous adoption by the lower house of a bill which checks the deal for a year, by providing that until July 1, 1908, no outside railroad shall acquire the stock of a Massachusetts road, and prohibits any domestic company from permitting shares of its stock to be voted in behalf of another corporation, or allowing another corporation to exercise control over it. In this way a full year is allowed in which the people of the commonwealth will have abundant time to examine the project in all its bearings, while the officials can formulate measures calculated effectually to safeguard public interests should it be decided to permit the consolidation under proper restrictions. The action of the legislature in adopting this course in the matter, suggested by Governor Guild, is in accordance with what seems to be the prevalent sentiment in Massachusetts, there being no general opposition to the deal, but a very pronounced feeling that it should be hedged around so that no harm can come to the business of Boston and other manufacturing and trade centers of the state.

Representatives of the stockholders of the United States Express Company who have been claiming that the company in question could, and should, pay larger dividends than 4 per cent. per annum are still agitating that question, and have this week published another manifesto setting forth the large amount of the company's assets in excess of what has been claimed by its officers. On the other hand, a development of some importance, and apparently adverse to the United States Express organization, has been announced. Up to this time the latter has handled both the local and through express business between New York and Buffalo over the Delaware, Lackawanna & Western Railroad, and between Buffalo and Chicago on the Lake Shore & Michigan Southern. It seems, however, that this has been entirely changed, and that on July 1 the local business on the Lake Shore will be taken over by the American Express Company, the United States Express retaining only the through traffic. The details of this matter are not fully known. It would seem, however, that ample reason for the change is afforded by the fact that the New York Central, which controls the Lake Shore, is a large stockholder in the American Express Company, and, furthermore, that the New York Central would naturally wish to increase its own traffic and earnings and did not care any longer to divide the express business with the Lackawanna.

An important meeting was held in New York this week attended by representatives of the manufacturers of steel rails and high officials of different railroad corporations. It was called by the United States Steel Corporation for the purpose of discussing a method of arriving at satisfactory arrangements between rail makers and railways regarding new and proper specifications necessary to insure perfect rails and to decide upon the question of the cost thereof. It would seem that certain of the manufacturers have insisted upon a higher price for rails made under the new specifications which have been formulated by the Pennsylvania, that company having taken the lead in adopting changes in the shape and method of manufacture. It is stated, in fact, that these changes are very radical. The Cassatt section, as the Pennsylvania's new type of rail is denominated, from the fact that it was devised by the late president of the company, Mr. A. J. Cassatt, calls for a heavier flange, so that the flange and the crown, that is to say, the bottom and top of the rail, will be of nearly the same width and dimensions. In the present form of rail, the flange being lighter than the crown, the rail cools imperfectly, and is more likely to fracture than would be the case should this improvement be adopted. The new Pennsylvania specifications also call for the cutting off of at least 25 per cent. from the top of the steel ingots used in making the rails, instead of 15 per cent., as at present. The object of this is to provide against the fact that bubbles and impurities collect at the top of the ingot, their presence constituting one of the principal sources of weakness when the rail is rolled. The claim of the steel manufacturers that the cost would be seriously enhanced seems, therefore, to have some foundation, but that it would be unprofitable to make rails under the new specifications at the present price of $28 per ton is regarded as somewhat open to question. It can, however, be readily understood that a higher price will be asked for rails of the new type.

Another important consolidation of copper-mining interests has been projected. In this instance the announcement, which came out about the middle of the week, refers to the principal mines at Ely, Nev. The companies which are to be consolidated include the Nevada Consolidated, the Cumberland-Ely, the Giroux and the Ely Mines Company. Up to this time the production of this district has been comparatively small, owing to the fact that most of the companies which are exploiting it are in the development stage as regards their mines and are engaged in constructing smelting facilities. It is understood that interests connected with the American Smelting & Refining Company are behind the proposed consolidation, as the same parties are now erecting an enormous smelting plant at Ely, the estimated cost of which is in the neighborhood of $6,000,000, which fact would render a combination of the principal mines under their control an advisable step. The new company, it is understood, will have a capitalization of $50,000,000, and it is supposed that the stocks of the old concerns will be exchanged for the new on terms advantageous to the holders of the former. Incidentally, it is predicted by some people that when the development and construction work is completed the mines which are to be included in the new combination will have an output of not less than 100,000,000 pounds of copper per annum.

Coöperative societies have always been a feature in Great Britian, and the reports of these bodies are studied with interest abroad as well as here. In 1906 there were 1,596 such organizations in existence in Great Britain, a decrease of eighteen from the year before. Reports made by 1,588 societies show that they had an aggregate membership of 2,332,754, as against 2,259,479 members reported by 1,609 societies in 1905. According to the United States consul at Hull, the capital of these societies at the end of 1906 was $151,289,045, calculating the pound at $5. The increase in capital over 1905 is $6,078,945, or 4.1 per cent. Sales in 1906 amounted to $489,668,785, which is a gain of $18,681,215 over 1905, the ratio being nearly 4 per cent. In 1906 profits were $54,879,775, as against $52,290,815 in 1905, an increase of $2,589,160. The facts regarding the workings of the important societies are as follows:

	Members	*Shares*	*Sales*	*Profits*
WHOLESALE SOCIETIES.				
1905	1,419	$8,300,360	$138,626,035	$3,179,365
1906	1,411	8,480,110	148,251,085	3,884,955
RETAIL SOCIETIES.				
1905	2,153,185	130,385,870	305,434,955	49,796,190
1906	2,222,417	136,752,940	316,768,860	49,851,250
PRODUCTIVE SOCIETIES.				
1905	33,467	4,489,630	15,910,120	1,023,315
1906	32,720	4,014,845	13,869,880	843,375

With the lifting of the railroad embargo on cereal shipments, made possible after the winter congestion was relieved, there came a swelling of the interior movement which put this cereal year, as a whole, considerably in advance of the two preceding years. At least this was true of wheat and corn shipments, though oats show a notable decline as compared with the preceding year. The final returns of interior movement will not be available for a week or two, but the movement at leading primary points for fifty-one weeks of the year gives an idea of the expansion in wheat movement which has occurred—an expansion, by the way, which is about in keeping with the reported larger crops gathered in 1906, as compared with 1905 and 1904. In the following table the receipts of flour, wheat, corn and oats for the elapsed portion of the cereal year 1906-07 are compared with similar returns for 1905-06 and 1904-05:

July 1 to June 22	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
1906-07	20,469,674	246,010,831	211,469,764	198,582,414
1905-06	19,807,658	229,230,555	189,993,669	214,264,307
1904-05	16,681,010	205,195,047	180,685,782	159,351,352

The total wheat shipments in the current cereal year show a gain of 7.4 per cent. over the preceding year and of 20 per cent. over those of the cereal year 1904-05. Wheat-flour shipments gain 3.3 per cent. over those of the cereal year 1905-06 and 22 per cent. over 1904-05. Reducing the flour movement to a wheat equivalent, there is found a total interior or primary-point movement this year of 338,124,364 bushels, as against 318,365,016 bushels in the preceding year, a gain of 6.2 per cent. It will be recalled that the government figures of wheat yield in 1906 showed a gain of 6 per cent. over 1905, which points to an increase in the primary movement equal, in percentage at least, to the expansion in yield. Corn receipts for the fiscal year showed a gain of 11.1 per cent. over the preceding fiscal year and of 17.2 per cent. over the year 1904-05. The corn crop of 1906 was estimated to have gained 8 per cent. over the year 1905. Oats receipts showed a decrease of 8 per cent. from the preceding year, against an estimated increase in yield of 1 per cent.

In the midst of Wall street's despondency and depression, it is noted that leading British financial authorities have appeared to take a rather favorable view of the position of the stock market here, as well as of our railroad securities. The London *Statist*, for instance, in a recent issue, takes such ground, and proceeds to point out that there is no foundation for the idea which has been frequently set forth in various European quarters, that the United States has reached the maximum of its agricultural and mineral capacity. This country, says the authority in question, has vast tracts of fertile land only awaiting population to make them productive, and immense quantities of minerals which only require development. Even the theory that the limit of the wheat production of the United States has been reached it holds to be a mistake, as expert calculations show that it can double its contribution to the world's supply. The writer then proceeds to state that there is nothing unsound in the existing state of affairs in this country. Its progress has simply been at a more rapid rate than the supply of capital admits, and all that is needed is a period of relative rest.

It was expected as a matter of course that the annual showing of the American Car & Foundry Company would be an excellent one, the previous quarterly returns of its earnings having foreshadowed such results. The report for the year ending April 30, which was made public this week, fully bears out such anticipations. The net earnings of $11,113,088 represent an increase of $5,466,535, and the amount available for dividends, $9,347,084, represents a gain of $5,188,634, being also over four times the sum required to pay the 7 per cent. dividends on the company's $30,000,000 of preferred stock. After paying this dividend, as well as 2 per cent. on the common stock, together with appropriations of $1,207,540 for improvements and insurance reserve, there was a surplus for the year of $5,439,536 and total surpuls account of $19,552,630, the working capital being $17,001,120. While this excellent report reflects the activity and prosperity of the car-building industry, it is also to be noted that the company's strong financial position is the result of conservatism in regard to dividend payments on the part of the management in the past.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Carrier—Agent—Oral Agreement.

The New York Court of Appeals held, in the case of Clark vs. Ulster & Delaware Railroad Company, that an oral agreement by a station agent to furnish cars on a day named to a shipper of live stock was binding upon the company, and that its failure to have the cars at the station at that time rendered it liable for the shipper's damages. The court held that such an agreement amounted to a complete contract, the obligation of the shipper to receive the cars and to pay for them being implied, and that the signing by the shipper two days afterwards, and when the cars finally came, of a shipping contract relating to the company's obligations assumed in the transportation of the live stock, did not avoid its liability for the previous breach.

Railroad—Crossing Highways—Condition.

The Supreme Court of Louisiana held, in the case of Shreveport Traction Company vs. Kansas City, Shreveport & Gulf Railway Company, that the power of a railway to cross highways and other railroads is necessarily implied from the law authorizing its construction; that in this particular, railways for the local transportation of passengers, such as street and electric lines, cannot be justly differentiated from commercial railways; that a street railway and an electric railroad designed to run beyond the municipal limits may be incorporated under the same charter, and that in the absence of legislation the courts cannot annex to the expropriation of a grade crossing the condition that the plaintiff shall in the present or the future cross by means of an overhead bridge.

Bank—Lien—Indebtedness—Title.

The Kentucky Court of Appeals held, in the case of Frankfort & Cincinnati Railway Company vs. State National Bank, that in the sale of a railroad on a portion of which a bank had a lien for borrowed money, although the purchaser had information of an indebtedness by the railroad to the bank, where the bank through its cashier, duly authorized by its directors, was a party to the negotiation for the sale of the road to the purchasers, and where the purchase money—$350,000—was paid in cash to the holders of the stock and bonds of such road with the knowledge of the bank cashier, the bank was thereby estopped from enforcing its lien on the property as against the purchaser. The court said that the question in such a case was not what was the legal status of the title to the property, but what was its apparent status.

Action—Negligence—Receivers' Successor

The United States Circuit Court of Appeals for the Seventh Circuit held, in the case of Gray vs. Grand Trunk Western Railway Company, that for an injury suffered through the negligent operation of cars of a railway in the hands of receivers, an action may be maintained at law directly against a railway company which purchases and takes over the property from the receivers under a contract by which the purchaser assumes all outstanding obligations and liabilities of the receivers. The court said that the local law established the obligation assumed by a successor taking over the property and funds from a receivership with assumption of liabilities to be one of direct liability and not merely equitably for the payment of claims chargeable against the fund, and that the direct liability so affixed determined the nature of the cause of action in the Federal Court, and that it became enforceable there as law.

Eminent Domain—"Public Business."

The Supreme Court of Minnesota held, in the case of The Minnesota Canal & Power Company vs. Pratt et al., that under a Minnesota law of 1905, authorizing certain corporations to condemn such private property as may be necessary or convenient for the transaction of the public business for which they might be formed under the statute, the term "public business" as so used included the construction of works for supplying the public with water, light, heat and power; that the same law conferring the power of eminent domain on public-service corporations for specified purposes authorized the exercise of such power in aid of the construction of canals and reservoirs to be used to create and distribute electric power for general public use; that a public-service corporation, although authorized to condemn private property for the construction of canals and reservoirs for the generation of electric power, might not exercise such power when the particular enterprise contemplated an interference with the navigable capacity or navigation of any of the navigable waters of the state, unless such interference was expressly authorized by statute; but that where a public-service corporation was authorized to furnish water, light, heat and power for public and private use, it was not necessary that it should have first obtained a franchise from a municipality or a contract to furnish a city or village with its products before being entitled to exercise its power of eminent domain conferred by the law above referred to. The court further held that in the absence of the exercise of power by the federal government over navigable streams within the states, the latter have full power over such waters within their jurisdiction.

Railroad—Lands—Settler's Rights.

The Supreme Court of Minnesota held, in the case of Donohue vs. St. Paul, Minneapolis & Manitoba Railway Company, that rights acquired by settlement and improvement upon unsurveyed land duly and timely asserted will as against an intervening indemnity railroad selection made under the act of Congress of August 5, 1892, be protected in their entirety, even though the lands claimed lie in different quarter sections and the improvements of the settler are shown to be confined to a single quarter section. The court said that lands within primary limits and lands within indemnity limits of a railroad are both granted, but that one distinction between them is that as to lands within the primary limits the company's right attaches upon definite location, while as to lands within indemnity limits it does not attach until selection. A further distinction is that lands within the primary limits when once excepted from the grant remain in that condition, whereas the status of indemnity at the date of selection determines the company's right at that time only, and such lands are subject to subsequent selection at any time at which they may be free.

City—Lighting—Plant—Authority.

The Kentucky Court of Appeals held, in the case of Overall vs. City of Madisonville, that it is clearly within the police power of cities, even without express authority, to provide public lighting of their streets at the public expense; that when a city is given the power, either expressly or by necessary implication as an incident to its police power, to light its streets, and where the precise method is not expressly provided, it may either hire another to furnish the lights or it may furnish its own lights, the power to do the thing unrer servedly giving the city discretion in the choice of the means it will adopt; that the lighting of the public streets and places is a purely governmental matter, and a city having the right to build and operate its own lighting plant for governmental purposes may sell its surplus product to its citizens or elsewhere, and that in the matter of buying and installing a lighting plant the city is left wholly to the judgment of its council as to the kind and cost of a plant, and when and where it shall buy and how much at a time, there being only one limitation upon the city, viz, that it shall not become indebted beyond the income and revenues of the year without the assent of two-thirds of the electors voting on the question.

Contract—Land—Evidence—Damages.

The Court of Appeals of the District of Columbia held, in the case of Harten vs. Loffler, that in giving effect to a written contract by applying it to its proper subject-matter, extrinsic evidence may be admitted to prove the circumstances under which it was made whenever, without the aid of such evidence, such application could not be made in the particular case. In the case before the court, it appeared that in a written contract for the sale of real estate the property was described as "fronting on Brightwood avenue about sixty feet, with a depth of about 200 feet," and that these exact measurements would cut off a part of the dwelling house and lot, while all the other terms of the contract description of the property to be sold would include the whole dwelling and lot. The court held that a latent ambiguity existed to remove which the construction given by the parties themselves, as shown by their acts and admissions, might be proved by parol for the purpose of showing that a sale of the entire property was contemplated. The court further held that the measure of damages for the breach by the vendor of a contract for the sale of real estate, including a barroom business conducted thereon with the license and good will, was the difference between the purchase price and the market value at the time of the contract of sale.

BUSINESS NOTES.

Aluminium Production.

It is estimated that there was produced last year a total of 14,500 metric tons of aluminium in the world, comparing with 11,500 tons the previous year, an increase of 25 per cent. It is estimated that consumption has equaled production for the past few years. The world's production by countries for the past four years compares as follows (in metric tons):

	1906	1905	1904	1903
United States	6,000	4,500	3,900	3,400
Germany	3,500	3,000	3,000	2,500
France	4,000	3,000	1,700	1,600
England	1,000	1,000	700	700
World	14,500	11,500	9,300	8,200

Last year's production of 14,500 tons was approximately equal to the amount turned out in the two years 1900 and 1901—14,800 tons.

World's Rubber Supply.

According to a German authority, the world's production of rubber has increased from 53,348 tons in 1900 to 67,999 tons in 1906. The consumption has advanced from 48,352 to 62,574 tons. Meanwhile the visible supply has been kept more or less steadily on a decline until only 8 per cent. of the product is visible. The rate of growth, in tons, is shown in the subjoined table:

	Production	*Consumption*	*Supply June 30*
1900	53,348	48,352	8,869
1901	52,864	51,136	6,941
1902	53,887	51,110	6,816
1903	55,603	55,276	5,053
1904	61,759	59,666	4,388
1905	68,879	65,083	4,584
1906	67,999	62,574	5,352

The countries which are engaged in growing rubber are all tropical in their character. Of these Ceylon, the Malay peninsula and Africa are by far the largest contributors. Brazil, which is often thought of as a leading rubber country, is credited with having only 5,000 acres in its plantations out of almost 150,000 acres in all countries.

German Expansion.

German exports of iron increased 9.44 per cent. in 1906 and imports by 114 per cent. Home consumption of pig iron for 1906 was 8,208,000 metric tons, almost 1,000,000 tons larger than for 1905. The output of pig iron of 12,478,000 metric tons increased more than 1,500,000 tons over 1905. Total receipts of the German railway system in 1906 were over $520,715,000, an increase of nearly $50,000,000 over 1905. New joint-stock companies floated in 1906 numbered 212, with over $117,000,000 capital, compared with 198, with less than $100,000,000 capital, in 1905, and 104, with $36,000,000 capital, in 1904. Prussian savings banks increased $131,000,000 in deposits for 1905 to a total of $2,020,000,000, and last year's figures will show further expansion. In 1900 persons liable to income tax numbered 3,380,000, and total income assessable was $2,007,134,000. Last year the number was 4,675,000 and the assessable total $2,609,889,000, which shows an increase over 1892 of 80 per cent. German imports in 1906 were $2,039,150,000, against $1,809,427,000 in 1905 and $1,667,862,000 in 1904; exports were $1,519,258,000 in 1906, against $1,421,461,000 in 1905 and $1,293,420,000 in 1904.

Banking Resources of New York.

The *Wall Street Journal* says: "There are 151 national banks, state banks and trust companies in Greater New York, as follows:

	No.	*Average resources*
National banks	43	$35,280,000
State banks	57	1,012,000
Trust companies	51	25,100,000
	151	22,300,000

Their total resources amount to $3,518,990,000, this being over 18 per cent. of the total resources of the 17,905 banking institutions in the United States. The resources of the national banks of New York and Brooklyn, as shown by their statements to the Comptroller of the Currency on May 20, were $1,517,806,490. The resources of the state banks, as reported to the State Banking Department on June 4, were $570,702,500, and the resources of the trust companies on the same date, $1,281,010,000. The bonds and other securities held by the banking institutions of Greater New York are: National banks, $222,621,588; state banks, $25,986,000; trust companies, $271,599,200; a total of $520,206,785. Thus over 15 per cent. of the total resources of these banking institutions are invested in bonds and securities. The stock and bond holdings of the trust companies have increased $78,000,000, or 40 per cent., since January 1, 1903. In view of the state of the bond market it is, perhaps, well that the bond reserve is no larger. The national banks hold $233,185,963 of specie and legal tenders; the state banks hold $66,477,800 of specie and legal tenders, including national bank notes, and the trust companies $56,879,300, a total of $356,543,063. Thus 10 per cent. of the total resources of these banking institutions are held in cash reserves. The total loans of the 151 banking institutions of Greater New York aggregate $1,748,112,060. The real-estate loans are not included in this total. The following table shows the aggregate loans and the percentage of cash reserves to loans of the different classes of banking institutions:

	Loans	*Cash*
National banks	$766,069,960	30.43
State banks	275,136,000	24.14
Trust companies	706,906,100	8.05
Total	1,748,112,060	....

The gross deposits of the national banks amount to $1,138,648,868; of the state banks, $407,757,600, and of the trust companies, $990,207,000, making a total of $2,536,643,468. It will be observed by this exhibit that the trust companies and the national banks are practically on a level as regards loans and deposits and bond reserves. The national banks, however, still hold a great supremacy in the matter of cash reserves."

Savings-Bank Dividends.

The following table shows the interest rate that will be credited to depositors in the savings banks of Manhattan on July 1, compared with the rate of January 1, 1907, and the amount of deposits in each bank on that date:

Savings banks	*Div. p. ct., July 1, '07*	*Div. p. ct., Jan. 1, '07*	*Deposits, Jan. 1, '07*
American	3½	3½	$2,467,220
Bank for Savings	4	4	88,678,871
Bowery	4	3½ & 4	96,922,370
Broadway	4	4	10,482,382
Bronx	4	4	76,051
Citizens	4	3½ & 4	14,636,982
Dollar	4	3½	5,434,235
Dry Dock	4	3½ & 4	32,830,267
East River	4	4	25,168,706
Emigrant	4	4	92,706,181
Empire City	3 & 3½	3 & 3½	3,381,139
Excelsior	4	3½	7,372,258
Franklin	3½	3½	17,147,322
German	4	3½ & 4	16,423,347
Greenwich	4	4	59,382,164
Harlem	4	3½ & 4	16,423,347
Irving	4	3½ & 4	20,928,167
Italian	4	3 & 4	2,207,423
Maiden Lane	4	4	565,701
Manhattan	3½ & 4	3½	12,000,986
Metropolitan	4	3½ & 4	9,895,035
New York	4	4	25,096,101
North River	4	3½ & 4	8,173,391
North Side	4	4	251,167
Seamen's	4	4	68,966,509
State	4	4	17,584
Union Dime	4	3½	27,450,232
Union Square	3½ & 4	3½ & 4	8,551,840
United States	3½	3½	2,894,508
Washington	4	3½ & 4	904,782
West Side	3½	3½	2,230,191
Total deposits since January 1, 1907			728,348,758

World's Copper Production.

The Metallgesellschaft of Frankfort-on-Main, in its annual compilation just received from Germany, estimates that world's production of copper last year amounted to 732,000 metric tons, which is lower than the estimates of two other leading European copper authorities—782,842 metric tons as figured by Henry R. Merton & Co., of London, and 736,711 metric tons by Aron Hirsch & Sohn, of Germany. Figured down to pounds, the above lowest estimate of last year's total copper output is equal to 1,607,994,000 pounds. A comparison of the world's output, in metric tons, for four years follows:

	1906	1905	1904	1903
United States	429,400	411,000	380,900	327,100
Other America	88,800	80,000	82,500	95,400
Germany	32,300	31,700	30,300	31,200
England	72,700	68,000	65,300	71,400
Other Europe	34,800	31,100	34,400	34,600
Japan	45,000	33,700	32,100	33,200
Australia	29,500	23,900	22,700	19,500
Total	732,500	688,400	643,200	592,400

The consumption of raw copper for a series of years by countries compares as follows (in metric tons):

	1906	1905	1904	1903
Germany	151,500	128,000	136,200	110,100
England	107,600	103,300	127,900	107,600
France	65,500	56,400	56,600	48,600
Austria-Hungary	24,700	22,700	23,200	18,900
Russia	26,600	27,600	31,200	25,000
World	728,800	733,500	668,700	588,100

The value of the world's production of copper for the past few years is estimated by the Metallgesellschaft as follows:

1906	$313,440,000	1901	$175,440,000
1905	234,960,000	1900	180,000,000
1904	208,800,000	1899	172,800,000
1903	168,480,000	1898	115,360,000
1902	142,800,000		

CURRENT BUSINESS NEWS.

Commercial.

A steamship sailed from Philadelphia for France this week with seventeen locomotives for the Orleans Railroad of France. The locomotives are the largest ever built here, and are believed to be the largest in the United States. They were built along the lines of the English engines.

The first bale of new cotton to arrive at New York this year was sold at auction in front of the Cotton Exchange Tuesday. Latham, Alexander & Co. were the successful bidders. The purchase price was 40 cents per pound.

The Weather Bureau's review of the week in the crop country of the United States, issued Tuesday, contained the following: "Except in the plateau regions during the fore part of the week, the whole country experienced very favorable temperatures. During the week ending June 24 frosts occurred in the plateau and middle Rocky mountain regions, and snow in the mountains of California and Montana. Rain is needed throughout Tennessee, in southern Alabama and in the coast counties of Texas. Elsewhere in the central and eastern portions of the country there is generally sufficient moisture. The week was comparatively free from severe local storms. There was a high percentage of sunshine in the districts east of the Mississippi river and also in the west gulf states throughout the week, while the latter part of the week was more or less cloudy in states of Missouri valley. There was generally ample sunshine."

William Rockefeller, when asked Wednesday what he thought of business prospects, said: "I think the situation which has prevailed for several months past is wearing itself out very rapidly and that the prospects for the future are good. I see no signs of a general reaction in business. Some of the merchants and others may have a little setback in business, but it should not be important. Concerning the railroads, their earnings make astonishing gains. However, it would be a great deal better for them if their business were running 10 per cent. to 15 per cent. lower. In that case there would be more profit for the railroads. There is more business than can be handled economically. For one concrete illustration—and there are doubtless many others like it—the New York Central recently had 7,000 loaded freight cars on its line which it was unable to move because its facilities were overtaxed. Such situations make economical operations impossible."

Broomhall's foreign crop summary, cabled Tuesday, said: "United Kingdom—Very unseasonable, causing apprehension; harvest indications only moderate. France—Crop outlook favorable; warmer weather needed. Germany—Some apprehension regarding outlook, as the cool weather keeps crop backward; native wheat offered freely. Hungary—Weather favorable; some estimates being raised. Roumania, Bulgaria and Turkey—Weather favorable; prospects for winter grain show improvement; spring crops fair. Italy and North Africa—Prospects favorable. Spain—Harvest south will be short; elsewhere moderate; some deterioration from recent drought. Russia—Southeast favorable; middle south, east and center outlook fair; only occasional complaints; in southwest, damage to winter wheat fully confirmed; spring crops need rain; supplies generally light. Belgium and Holland—Outlook satisfactory."

The value of railway equipment, as limited to rails, cars and locomotives, exported during ten months of the current fiscal year will be greater than in any previous year. Ten months' returns show that the exports of these commodities were valued at $23,167,312, at which ratio the total for the year will be nearly $28,000,000. This makes no allowance for other railway equipment shipped abroad, which would add considerable to the amount. A ten months' comparison follows:

	1907	1906	1905
Steel rails	$7,552,112	$7,209,704	$9,387,398
Locomotives	7,699,698	5,253,437	2,636,130
Cars, passenger and freight	7,965,502	6,177,100	2,499,309
Total	23,167,312	18,939,841	14,522,837

In the past year Mexico, South America, Asia and Oceania have been the best markets for American steel-rail manufacturers, these countries taking $4,836,370, much more than half of the ten months' aggregate.

Trade of the United States with her Latin American neighbors aggregates more than $600,000,000 in the fiscal year ending with the present week, against but little more than $230,000,000 a decade ago. The total commerce with all Latin America in the fiscal year 1897 was but $234,000,000 in value. In the fiscal year 1907 it will show approximately $610,000,000. In this figure is included the trade with Porto Rico, not now considered as foreign commerce but entitled to be considered in this calculation, which compares the figures of 1907 with those of 1897, a date when Porto Rico was a foreign country. Of the more than $600,000,000 which the trade with Latin America will aggregate in the year just ending, approximately $360,000,000 will be imports and $250,000,000 will be exports, still including in these figures the trade with Porto Rico.

The up-to-date agriculturist should always be on the lookout for information that may help in his field of endeavor. Therefore all such would do well to make a note of the fact that the United States Department of Agriculture will shortly issue a Farmers' Bulletin (301), entitled Home-Grown Tea, prepared by George F. Mitchell, scientific assistant, Bureau of Plant Industry. The bulletin describes briefly the methods of growing tea plants and the handling of the same for the production of tea. A practical method is described for the making of tea from the fine leaf, using only such pieces of apparatus as are found in every kitchen. The bulletin will be of particular interest to persons throughout the south who may desire to grow tea for home consumption. Copies may be obtained by application to the Secretary of Agriculture, or to senators, representatives and delegates in Congress.

The New York correspondent of the Philadelphia *Public Ledger* figures that $12,000,000 will be expended for fireworks for this Fourth of July celebration, as against $10,000,000 last year. This year big orders were received from the Virginias, Georgia and Maryland.

It is stated that the subsidy for the twenty-five-knot steamship project, which it is expected will prove a serious rival to present routes across the Atlantic, as suggested by Sir Wilfrid Laurier at the closing session of the imperial conference, is to be $2,250,000 per annum for ten years, to be borne equally by the British and Canadian governments. This means a Canadian contribution of $1,125,000 yearly. Sir Charles Tupper in 1896 had made an arrangement with the Allans for a twenty-knot service, which was to cost Canada $750,000 yearly and Great Britain $375,000. It was turned down, however, by the Laurier government.

Consular Agent A. J. Bensusan quotes from an official Cadiz paper that the limitation in weight of international parcels post, hitherto fixed in Spanish territory at 3 kilos (kilo, 2 1-5 pounds) as a maximum, was on January 1, 1907, increased to 5 kilos, the cost of transportation remaining the same as formerly. Before this improvement in the parcels-post service was introduced parcels from abroad, on arrival at the Spanish frontier, had to be divided into two packages, one weighing three, the other two kilos, which caused delay in delivery and extra expenses, which is no longer the case.

The outlook for wheat and rye crops throughout the German empire, according to official returns, is not quite up to the standard of May, owing to the unfavorable weather. The output as a whole will be about medium. Rye showed some improvement over the previous season, but wheat is considerably poorer.

H. V. Jones estimates the Kansas wheat crop at 38,000,000 bushels; Missouri at 28,000,000; Oklahoma and Texas, 7,000,000; total, 73,000,000 bushels, against about 150,000,000 bushels last year, a loss of over 50 per cent. He says: There are practically no oats in Kansas and Oklahoma. In Missouri oats run from poor to fair.

Late press dispatches say: "All over England bad weather is seriously affecting agricultural interests. Dispatches from various parts of the great county of Lancashire say that the outlook there is the blackest within the memory of man. The land is waterlogged and large tracts of grass are rotting at the roots. The oats are only a foot high and are turning yellow. The fruit crop is a practical failure."

According to an Ottawa dispatch, the practical working of the new tariff, as exemplified in the period extending from December to May, has gone to show that the result is a scaling down of the duties which the consumers have to pay. The average rate of duty collected in the six months has been 26.74 per cent., as compared with 27.05 per cent. in the corresponding months of the previous year. If the free imports are added, it is found that the average rate of duty all round has been 15.81 per cent., as against 16.31 under the former tariff, and while the duties have been thus reduced, the manufacturing industries of the country were never in a better condition. The British preference, which averaged 21.72 per cent. under the old tariff, averages 21.15 per cent. under the new.

Financial.

The Chicago *Record-Herald* says: "The Rock Island and the Union Pacific roads have made a loan to the Alton road of $1,400,000, and have agreed to a further loan if necessary, not to exceed $600,000. The loan was negotiated by the Alton to 'pay for the extraordinary' improvements which it is desired to make this year. The Alton preferred getting the loan from the two roads named rather than to go into the money markets at this time. The loan is secured by notes which will mature in fifteen years. Five per cent. interest will be paid."

The Treasury Department is preparing to provide bankers in every part of the country with the new $10 gold certificates on July 1, the beginning of the fiscal year. The new certificates, which are the first gold notes of a denomination less than $20, were issued under authority of the Aldrich act in order to supply the demand for more currency of small denomination. Like the $20 gold certificate, the back of the new note is printed in orange ink, and there is some of the same color on the face of the bill. The face bears a finely wrought picture of Michael Hillegas, first Treasurer of the United States.

Signor Massimini, Minister of Finance of Italy, announces that the budget of 1906-07 will close with a surplus of more than $10,000,000.

Superintendent Keep, of the New York State Banking Department, has completed his tabulation of the reports of the 192 state banks, showing their condition at the close of business on June 4 last. The reports show a gain in aggregate resources for the quarter of $13,754,924. Superintendent Keep's tabulation is as follows:

Assets—	
Loans and discounts	$327,163,004
Liability of directors as makers	10,835,127
Overdrafts	358,677
Due from trust companies and banks	47,986,789
Real estate	13,856,026
Mortgages owned	7,207,371
Stocks and bonds	37,964,681
Specie	47,663,346
Legal tenders and national bank notes	23,806,194
Cash items	55,709,615
Other assets	1,412,183
Total	573,963,013
Liabilities—	
Capital	$35,203,000
Surplus fund	29,969,428
Undivided profits	14,866,160
Due depositors	418,877,104
Due to trust companies and banks	53,720,611
Due savings banks	19,165,659
Due building and loan associations	541,296
Deposits preferred, because secured by pledge of bank assets	400,000
Other liabilities	1,219,755
Total	573,963,013

According to the *Journal of Commerce*, the July dividend and interest disbursements this year by various corporations will reach a grand total of $182,881,849. This is $18,573,678 greater than the aggregate of last year and eclipses the total of any previous July in history, due to a number of dividend increases, the placing on the dividend list of various concerns, and payments on enlarged capitalization, as well as to the fact that the list is more complete than that of July last year.

The Treasury Department on Monday completed the purchase of $25,000,000 in 4 per cent. bonds maturing on July 1, 1907, under the order of the Secretary of the Treasury issued early last April. It is understood that no more 4 per cent. bonds will be purchased at this time, but those bonds remaining unredeemed will be taken up and paid for on and after July 2 next.

Governor Hughes has signed the law remitting to banks, trust companies and insurance concerns which invest in New York state 3 per cent. bonds their special franchise tax of 1 per cent. This law is designed to help the market for New York state bonds.

The recently issued report for 1906 of the Imperial Chinese Maritime Customs shows that from a minimum of 28 pence for the Shanghai tael in 1904 exchange rose, with many fluctuations, to a maximum of 37.75 pence in 1906, an increase of 35 per cent. within less than three years. Mr. Morse, the statistical secretary, asks what would be the effect on the commerce of western countries if, within three years, exchange between London and New York ranged, with many sharp and unforeseen fluctuations, between the extremes of 4.86 and 3.60, or if in the same time the Paris cheque fell from 25.25 to 18.70. While in 1906 the fluctuations within any single month were less than in the years immediately preceding, the year was characterized by a general upward trend in the price of silver and the rate of exchange, and the effect on trade was none the less injurious.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

The St. Petersburg correspondent of the Paris *Matin* says that the Russian Minister of Finance has been authorized to issue an internal loan of 50,000,000 rubles at 4 per cent.

Government bond redemption shows:

Fours of 1907 outstanding December 1, 1900	$116,755,550
Refunded under circular of April 2, 1907	50,307,800
Purchased under circulars of December 10 and February 11	5,237,550
Redeemed under circular of March 14, previously reported	24,969,800
Redeemed June 24	118,950
Total redeemed	25,088,750
Total refunded, purchased and redeemed	80,634,100
Outstanding	36,121,450

Railroads.

On Thursday, J. F. Fairlamb, general passenger agent of the New York Central, announced a new schedule of commuter rates, effective July 1. The schedule is the result of a readjustment of fares by the Central and will result in some instances in an increase of from 1 cent to 1½ cents per ride.

It is reported that a general order has been issued by the Chesapeake & Ohio Railway Company that every contractor engaged in work for the railroad shall stop July 1. It is said that this shutting down of work is due to the high price and scarcity of labor and to the high rate railroads have to pay for money on temporary loans.

W. C. Brown, vice-president of the New York Central, who has been west for six weeks, says: "My trip extended through Illinois, Iowa, Nebraska, Missouri, southern Minnesota and Michigan. Everywhere in these sections the outlook for the crops is excellent. Unless something entirely unexpected happens, these states should harvest practically full crops."

The Wisconsin Senate on Thursday, by a vote of five to twenty-one, killed the 2-cent railway fare bill.

Three of New York City's rapid transit commissioners are said to be backing a plan for a four-track elevated monorail road between Jersey City and Newark. It is proposed to run trains at least once in ten minutes at sixty to one hundred miles per hour.

Industrial.

There is almost a famine in Havana cigars on account of the strike and lockout of the cigar-makers in Havana, which has outlasted all expectations. The stock of imported cigars has run down to a low depth. There are about 21,000 men out, and there seems to be little hope for a change for the better.

The *Iron Trade Review* says: "Pig-iron production in 1906 was approximately as follows, in gross tons:

United States			25,300,000
Germany			12,300,000
Great Britain			10,100,000
Belgium			3,300,000
Sweden			600,000
Canada			500,000
Other countries			5,500,000
Total			59,000,000
In 1905	53,700,000	In 1901	40,200,000
In 1904	45,000,000	In 1900	40,200,000
In 1903	45,700,000	In 1890	27,000,000
In 1902	43,400,000		

The world's production doubled from 1890 to 1905, and then in a single year showed a further gain of about 10 per cent."

The Director of the Census has rendered a preliminary report on the purchase of crossties by steam and street railroads in the United States during the calendar year of 1906. The statistics were compiled with the coöperation of the Forest Service. They show that oak is the specie of wood most generally used for crossties, 45,363,426 feet having been used for that purpose during last year. Southern pine comes next with 18,834,514 feet, and cedar third with 8,085,302. Then comes fir, chestnut, cypress, western pine, tamarack, hemlock and redwood, of importance in the order named. The total consumption of timber in 1906 for crosstie purposes was 102,834,042 lineal feet. A comparison with 1905 is made which shows the consumption during that year to have been 77,981,227 feet, but the comparison is hardly a fair one, as those figures relate to steam railroads only and do not include ties for traction or electric lines.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Seasonable summer weather has further improved the general crop situation, enlarged retail trade, and favored a larger volume of reorder trade with jobbers and manufacturers than seemed possible a few weeks ago. Six months' results in wholesale and jobbing lines show the effect of recently improved conditions, but also reflect the large gains in trade noted in the first quarter of the year. Taken as a whole, leading wholesale lines will show a six months' business 5 to 10 per cent. at least in advance of 1906. Very much the same report is made by leading industries, which have generally surpassed records made in the first half of a year ago. On the other hand, collections, while improving in some sections, have tended to drag in others, suggesting excessive stocks of spring goods held by retailers. It is also to be noted that high prices of material and labor are reflected in reports of less activity in building at a number of cities, with some easing in prices of lumber and other materials. In the pig-iron trade there is a further slight easing in prices of third-quarter iron, and furnaces are reported catching up with orders on their books. Speculative sentiment this week has been improved by better crop and trade advices and manipulative efforts to force short covering. Stocks were stronger and higher, while bonds tend to lag. Expected good results were not obtained at the New York City bond sale. Higher call-money rates reflect slightly enlarged market operations as compared with the preceding week's exceptional dullness, and also the preparations for the semi-annual disbursements. Foreign gold takings seem to have come to an end for the present, in view of the reaction in exchange rates. Weekly clearings are still receding and are smaller than last week and last year at and outside of New York, but outside of the metropolis there will be a gain shown for the six months. It has been a profitable half year for the banks, many of whom are said to have made their year's dividends in six months.

Weather conditions are favorable to crops, which are regaining some of the ground lost earlier in the season. Compared with a month ago a great improvement has been shown, which will no doubt be reflected in the forthcoming government reports on cereals and cotton. Winter-wheat harvesting is quite general in the southern half of the belt, though interfered with by rains in Kansas and Missouri. The crop as a whole is made, and favorable weather is needed for cutting and gathering. Reports as to early yields are that results are below the average in southern Kansas, Indiana and Tennessee. Pacific coast crops look well, especially grain in the Pacific northwest and hay and fruits in California. Spring wheat is making good progress, but there are complaints of not enough moisture in the James river valley and too much in the Red river country. Average crops of spring wheat and oats are possible. Corn has made good progress but is still late, and stands are irregular. Warmer days and nights are needed in Iowa, and late arrival of frost is necessary if the crop is to mature properly. The western hay crop will be far better than earlier expected. Sugar and rice are in excellent shape at the south. Fruit and vegetables are turning out better than expected.

Cotton has made good progress under excellent weather conditions, and reports are unanimous as to improvement shown in the past few weeks of dry, hot weather, interspersed with showers. The complaints are that the crop is still late and that scarcity of labor makes for grassy fields in some sections. Corn is gaining throughout the south. New Orleans reports cotton in good shape, but the acreage is less than last year, owing to losses in replanting. Charleston reports cotton blooming in many sections.

Pig iron is slightly easier in price, and while the market is quiet, there is sufficient buying to prevent any marked decline. At the seaboard foreign iron is a factor making for easiness. While there is fear of a blast furnace workers' strike in the Shenango and Mahoning valleys, it is not thought that the stoppage of work will become general. Resales of basic pig iron intended for a tidewater concern have slightly disturbed the market at Pittsburgh. Offerings of steel billets are larger, and therefore prices are lower. Business in steel bars is good. Cast-iron pipe is fairly active and structural material is in fair request, the demand being mostly for railway bridge work. Independent mills are making pretty prompt deliveries of universal plates, and premiums are not so much in evidence. New business in steel rails is not heavy, but some large contracts are pending a settlement of negotiations for an improved rail. Old material is weak. Demand for coke is more active, but the supply is ample. Copper is lower, but a buying movement is looked for shortly, particularly if prices go still lower.

Wheat was narrow but strong most of the week, but grew excited on Thursday and made a quick and big jump up on bad crop reports and bullish crop estimates by "traveling experts." An early strengthening feature was the large decrease in the amount on passage (6,000,000 bushels) on Monday. Good export buying was a feature on Tuesday. On Wednesday rain reports from the southwest and drought advices from North Dakota were stimulating effects, and on Thursday there was a jump of 4 to 5 cents on predictions that Kansas will have only a 40,000,000-bushel crop, and that Kansas, Oklahoma and Texas together would produce only 50,000,000 bushels. The market held all of this advance on Friday, leaving the net advance for the week from Friday to Friday 3 to 5 cents at most markets, and half of the late decline was practically regained. Corn was stronger in sympathy with wheat, reports of backward conditions and good cash demand, closing ½ cent up. Oats broke 3 cents early on liquidation based on better crop reports, and only regained ½ cent up to the close. Provisions were strongly held most of the week, with pork unchanged and lard up 20 points. Cottonseed oil dropped 2 cents on better crop advices. Raw sugar gained 16 points on reaction from the late decline and sympathy with foreign markets. Refined is quiet and fruit-crop reports irregular. Coffee is slightly lower for futures and unchanged for spots. Cotton, after early weakness due to good crop reports, hardened and advanced 24 to 36 points net on the week on renewed manipulation of old crop months. Spots are up 15 points.

The New York stock market was dull early, but displayed greatly increased activity with general advances after the middle of the week. Good crop prospects, as well as an apparent ending of the gold-export movement, were largely responsible for this, while the market disregarded the advance of money rates to 7@10 per cent. on call as being a natural and temporary result of the enormous July 1 disbursements, which amount to over $180,000,000. The failure of the New York City bond sale to be fully subscribed for caused a break on Friday afternoon. The foreign exchange market also broke some 40 points, demand sterling being 4.86.40, although $5,650,000 of gold was shipped abroad early in the week. It would seem that the foreign demand for gold is ended, the Bank of England having withdrawn its offer to pay interest on amounts in transit.

Bank clearings for the week ending June 27 aggregate $2,405,051,000, 6 per cent. below last week and 8 per cent. under this week last year. Outside of New York exchanges amount to $1,062,450,000, 3 per cent. less than last week, but 11 per cent. over the week last year.

Business failures for the week ending June 27 number 150, against 165 last week, 146 in the like week of 1906, 185 in 1905, 204 in 1904 and 162 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending June 27 aggregated 3,598,724 bushels, against 2,850,222 bushels last week, 1,902,555 bushels this week last year, 756,641 bushels in 1905 and 3,382,701 bushels in 1902. For the past fifty-two weeks of the fiscal year the exports are 170,770,806 bushels, against 134,619,519 bushels in 1905-06, 62,432,740 bushels in 1904-05 and 249,931,895 bushels in 1901-02. Corn exports for the week are 1,173,375 bushels, against 988,832 bushels last week, 870,237 bushels a year ago and 1,266,364 bushels in 1905. For the fiscal year to date the exports are 71,693,688 bushels, against 110,250,530 bushels in 1905-06 and 78,878,030 bushels in 1904-05.

IN CANADA.

Better weather makes for good crop growth, active retail trade and enlarged reorder business, while fall trade reports are of the best. An average wheat yield is looked for in the northwest. Montreal reports an improved reorder business with jobbers, and knit-goods men and blanket manufacturers are unable to fill all orders booked. Butter and cheese exports are light. Toronto reports improved trade at wholesale and retail, knit goods are oversold, crop prospects are encouraging, manufacturing is active, and Ontario collections are good, while western payments are slow. Winnipeg reports an average wheat crop probable, but that farmers are being tempted to hold grain for high prices and that collections are slow. Trade is active and labor is scarce on the Pacific coast, and scarcity of coal threatens manufacturing activity. Clearings for the week aggregate $78,536,294, a decrease of 6 per cent. from last week, but an increase of 13 per cent. over this week a year ago. Failures number 29, as against 15 last week and 22 in this week a year ago.

CROPS STILL IMPROVING.

MUCH LOST GROUND REGAINED. RAINS CHECK WINTER-WHEAT HARVESTING, WHICH IS ALMOST GENERAL. EARLY REPORTS ARE OF LIGHT YIELDS—BELOW AVERAGE IN KANSAS, TENNESSEE AND INDIANA. AVERAGE CROPS OF SPRING WHEAT AND OATS POSSIBLE. RAIN NEEDED IN PARTS OF NORTHWEST. CORN IMPROVING BUT STILL BACKWARD, AND STANDS ARE IRREGULAR. A GOOD CROP OF WESTERN HAY. PACIFIC COAST FRUIT OUTLOOK GOOD. COTTON GREATLY IMPROVED BUT STILL LATE. PERFECT WEATHER.

CHICAGO.—The weather has been favorable for crop progress and fair gains have been made in nearly all sections. Harvesting of winter wheat is general in most states, but was seriously delayed in the southwest by heavy rains, which have fallen more or less for a week in Oklahoma, southern Kansas and Missouri. Yields are reported as lighter than expected. Winter wheat has come along well in Nebraska; the crop is made and only awaits favorable weather for cutting. Spring wheat in the northwest is still backward. In the James river valley and in parts of western North Dakota drought has retarded growth, and the crop is thin, late and weedy; but the main thing to be feared is an early frost. In parts of the Red river valley there is too much moisture. Green bugs have been found in wheat in South Dakota and Minnesota and are in oats in Nebraska and parts of Illinois; but damage so far is not extensive, and bugs will have to work rapidly in Illinois, as the crop is nearing maturity. At best, spring wheat and oats will not make over an average crop. Corn has done well toward making up for its early lateness, but three weeks of the most favorable weather is necessary to bring it up to the seasonable average condition. The stand is irregular; where not interfered with by rains, fields are fairly clean. Prospects for hay have improved.

INDIANAPOLIS.—Wheat is now being harvested in the southern part of the state. The yield is a little below the average, but the quality is excellent. The green bug and army worm continue to put in an appearance at different places, but so far are not believed to have done any material damage.

CINCINNATI.—Wheat is looking well, and if favorable weather continues a large yield is expected. Oats and corn are making good progress in most sections.

ST. PAUL.—Small grain in North Dakota and Minnesota, though behind, is rapidly coming along. The decrease in wheat acreage is placed as low as 5 per cent. by one authority. The oats crop is likely to be a good one. Corn is the only doubtful crop, but with continued warm weather and a late fall, it may mature. Reports about cutworms, rust and other pests are confined to isolated localities.

DAVENPORT.—The weather during the past week has been favorable to growing crops. Rain is plentiful. Corn would do much better were the days and nights warmer.

DES MOINES.—General conditions for cultivating crops are reasonably favorable, but the stand of corn is much less than the average of the best seasons.

SIOUX CITY.—Corn crop conditions are improving and small grain is doing well.

SIOUX FALLS.—Favorable weather continues and all crops are gaining.

OMAHA.—Oats are in much better condition, but will not make an average crop. Corn has made rapid growth, but it is still late.

ST. LOUIS.—There is some complaint as to too much rain during the harvest of winter wheat, but so far no damage has been reported. Corn shows considerable improvement and the acreage is reported as larger than last year.

ST. JOSEPH.—The condition of wheat in this territory is good. Several counties report about 60 per cent. of a crop. Corn is still backward, but otherwise conditions are good.

KANSAS CITY.—Harvesting of wheat has commenced in southern Kansas, and it is thought that the crop in that state will not be much below the average.

OMAHA.—Wheat has made rapid progress the past week, the straw has lengthened, and the grain is beginning to ripen.

CHARLESTON.—The cotton crop continues to look good and is quite promising. Blooms are reported from all sections.

RICHMOND. — Shipments of vegetables to northern markets are larger. Reports from cotton-growing districts are much more favorable. The wheat crop, which is a good one, is being harvested. Warm weather has greatly improved all growing crops.

AUGUSTA.—The weather is seasonable for growing crops.

ATLANTA.—The cotton plant is making good headway. The hot weather is favorable, and the only complaint heard is that, owing to occasional rains, grass cannot be kept out of the fields on account of scarcity of labor.

BIRMINGHAM.—Farming operations have made good progress.

MACON.—Crops are improving under warm and showery weather.

MONTGOMERY.—The weather has been more favorable this week for growing crops. Cotton has made especially good progress, owing to hot, fair weather.

MOBILE. — Favorable weather continues and the crop situation shows steady improvement.

MEMPHIS.—Needful rains have fallen, weather conditions are favorable, and corn and cotton are making good progress.

NASHVILLE.—Reports from 50 per cent. of the counties in Tennessee indicate only half a crop of wheat. There will be only about one-tenth of a fruit crop. Corn is backward but enjoying growing weather, as are also the grass crops, which seem to be in fine condition.

LITTLE ROCK.—The weather during the past week was very favorable to crops, and cotton shows a decided improvement.

NEW ORLEANS.—Cotton is growing well and the improvement has been all that could be hoped for. With normal conditions prevailing throughout the summer, there will be a good yield in the territory tributary to this market. The acreage, however, is much reduced, owing to damage to many fields that could not be replanted. There is complaint of boll weevils in some of the northwestern Louisiana parishes, but efforts are being put forth to minimize this damage. Reports from rice and sugar sections are excellent.

DALLAS.—The weather during the past week has been warm and the condition of the cotton crop has considerably improved. Boll weevils are reported plentiful, but the cotton is not far enough advanced for them to have caused any damage.

FORT WORTH.—Favorable weather continues. Cotton is doing well, but is three to four weeks late.

WACO —The weather continues favorable to cotton, which, though about fifteen days late, is in fair condition.

SAN FRANCISCO. — Reports are favorable regarding crops of hay, grain, peaches, raisins and prunes.

PORTLAND, ORE.—Farmers are getting better prices for produce, and the outlook for the harvest is good.

SPOKANE.—Wheat promises a large yield.

TRADE REPORTS.

Dry-goods business at New York for the past week has been active and of good proportions for the season. Cotton goods continue to show wonderful strength, prices being firm and the demand large. Silks are also in good request, and an active business is reported in nearly all the other lines, with the exception of men's underwear, in which department there is some dullness; collections generally have been good. Quotations for raw silk are lower, but this has not led to any business, which continues dull. Conditions in the worsted and cotton-yarn trade are unchanged; demand is active, but goods are scarce and dear. Manufacturers of cloaks and suits report better trade conditions and that business is just now brisk. Retailers also have been exceptionally busy. Men's furnishings continue in active demand and spring trade has been very satisfactory. Wholesale grocers report more inquiry for goods, and retailers say their business is satisfactory. The flour commission men say trade is fairly active. Live stock and dressed meats are in good demand at firm prices. Butter has advanced 1 cent. Ten thousand cases of eggs have been stored, while demand continues good. In the hardware and kindred lines there is no change, and collections are still reported slow. The same complaint is heard from manufacturers of electrical goods. Structural steel is in active request. Pig-tin prices have advanced. Manufacturers of machinery report business quieter. In the foregoing trades there is a pronounced tendency to restrict credit and require more prompt payments. American hemp twine continues in excellent request and the price has an upward tendency. Cotton cordage is scarce and dear. Drugs and chemicals are fairly active. The hide and skin business continues quiet, but leather is showing more activity. Shoe retailers have had an active week, and makers of pocketbooks and bags are beginning to make up goods for fall trade. The mechanical rubber-goods trade is active and general conditions in that line are favorable. Conditions in the furniture trade are somewhat better, but collections continue more or less slow. The real-estate business for the week has been small in volume and unimportant in character. In the paper trade there is a fair demand, but, as usual at this time of year, there is a lessened amount of sales. Prices are steady, with an upward tendency, and collections are from fair to very fair.

The following telegrams show trade conditions at the cities mentioned for the week ending June 28:

BOSTON. — Dry goods and furnishings for summer are in much better demand as a result of hot weather, and stocks in hands of retailers, which had appeared to be overlarge, are being drawn upon. Jobbers are meeting some urgent demands for goods to fill out in some lines. Generally there is a more confident tone in the market and a hope of a satisfactory wind-up to the season's trade. Cotton goods continue very strong at a high level of prices. Jobbers who have had goods in hand or under orders at old prices have been able to sell under manufacturer's present quotations and to realize good profits. Dress goods in staple lines and colors are strong. Raw silk is high in price. Men's furnishing goods have been more active since the hot weather began and there is promise of a large business. Jobbers in paper report a more quiet condition of trade, as is expected in summer; prices generally are firm, news paper and boxboard being especially strong. Collections of some lines of paper stock have been increased by the better weather, but so far no quotable declines in prices have occurred, demand being sufficient. Warmer weather has stimulated business in automobiles and supplies, and sales the past week have materially increased. Trade in furniture is fair, but collections are slow. All lines of lumber are reported quiet, prices showing no material change. In iron and metals demand is light. Building supplies, such as bricks, lime and cement, show a moderate business, with prices firm. Anthracite coal is active, retailers doing a good business, and buying being active in anticipation of the July advances. There is a very good business in painters' supplies. Liquor at wholesale is quiet. Champagnes and light wines are in good demand. Brewers are busy, as there is a heavy demand for beer and ale. The high price of beef and prevailing warm weather have had an effect upon consumption. Salt-water fish are in large supply, the heavy receipts of mackerel being especially noteworthy.

PROVIDENCE.—In the jewelry trade prospects are excellent. The extreme warm weather the past week has increased retail trade materially. Manufacturers of cotton goods report firm demand and high prices. The retail lumber trade is quite active. Collections are fair.

PORTLAND, ME.—Travel to summer resorts is heavy. Extremely hot weather benefits crops and retail trade in provisions, clothing and dry goods. Wholesalers are doing the usual summer business.

PHILADELPHIA.—Jobbers and retailers of dry goods and notions have had a fairly active week. Collections are fair to slow. Wool is rather quiet, stocks coming in slowly and high prices maintained. Textile manufacturers report a fair trade, and while there is probably not as much machinery in operation as earlier in the season, the output is large. Chemicals and dyestuffs are dull, dyers reporting business slack, and consequently they are buying supplies in small quantities. Prices are firm and collections fair. Paints and glass are in good demand and moving in large volume at satisfactory prices. Lumbermen report inquiry rather quiet for future delivery, but jobbing business is good. The leather market is less active, especially for harness goods. Sole leather is also quiet, but there is a good demand for calf leathers. Prices are barely steady. Out-of-town buyers have been making some purchases of glazed kid, but the market is not particularly active. Hides are draggy, especially winter stocks, and the market is unsteady, though improved weather conditions are inducing a healthier tone. Retail shoe dealers report a better business since the advent of warm weather, and stock is consequently moving more freely. Jobbers also note more activity. Prices are firm. Tobacco users, particularly the heavier buyers, having had enough of most kinds of goods to last for months, have been holding off buying, looking for lower prices, but goods are in the hands of those preferring to wait rather than shade prices. In the meantime stocks are being used up closer, and manufacturers are now looking around and making some purchases. Collections are complained of. Liquor distillers have had more than an average business, both in withdrawals from bond and sales for the first six months of the year. At present they are quiet. The trade is in good condition, with prices steady. The change in iron from week to week is too slight to be noticeable and quiet prevails. The influence of hot weather is felt in coal for domestic purposes, it having assumed the usual summer quietness. Steam coals are in fair demand at steady prices.

PITTSBURGH.—There is scarcely any movement in pig iron. Little Bessemer iron is available, and the attitude of buyers seems to be figured upon the assumption that prices are at the crest and that nothing would be gained by coming in just now. There are some offerings of light tonnages of basic iron, but buyers do not seem to be insistent at this time. During the week some 2,800 tons of foundry and mill irons were sold for fourth-quarter delivery at prices ranging from $23.25 to $24.25. Some little apprehension is evinced by the steel smelters as to a rumored strike to take effect at the valley furnaces July 1, but furnace operators do not appear to be alarmed. There is some improvement in coke on good demand and smaller offerings, though prices are unchanged. Spot pig iron is quoted at the valley furnaces nominally as follows: Standard Bessemer, $23.50; chilled basic, $23 50; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2, and foundry coke, $3 to $3 25.

BUFFALO.—Retail trade is active on continued favorable weather. Wholesalers and jobbers report sales normal, and while collections are not as prompt as desired, they are generally regarded as satisfactory.

BALTIMORE. — Wholesale and manufacturing lines have been fairly busy this week. Road orders in some lines have not been as numerous as anticipated, but fewer cancellations are reported, and with continued seasonable weather, conditions are expected to shortly adjust themselves. Collections in general continue below the normal, though showing slight improvement. Current business in dry goods is quiet, with prices firm and fractionally higher in some lines. There has been a fair demand for boots and shoes at well-maintained prices. Immediate business in millinery has been seasonable. Paper at wholesale is quiet, with no indications of weaker prices. Hardware has been rather brisk. Clothing manufacturers report a fair amount of fall orders, with some cancellations noted. Manufacturers of shirts and overalls are well employed but complain of backwardness in mill deliveries. Groceries at wholesale are quiet. Leaf-tobacco receipts are liberal and sales are more active, as manufacturers are replenishing stocks that had been allowed to decline in hopes of lower prices. Retail trade shows improvement, owing to seasonable weather. Money is in demand, with supplies well taken.

CLEVELAND.—Jobbers report the half year's distribution as exceeding that of a year ago. Country collections in clothing and hardware trades are somewhat slow, owing to the check on retail trade caused by the unseasonable weather of April and May, but in dry goods, boots, shoes and groceries they are classed as about normal. Industrial concerns generally are busy, manufacturers of saddlery and carriage hardware being specially active. The business situation as a whole is quite satisfactory.

CINCINNATI.—Business has gone forward during the week, and while retail stores are overstocked with summer goods, the outlook is more encouraging than for some time. Jobbers of dry goods and notions report a fair amount of orders for fall goods. Whiskey continues dull, with no improvement in sight. Machinery is backward. Lumber is active and the hardware trade is brisk. Flour is dull.

CHICAGO.—Good weather has helped retail trade, increased sales of light summer goods and brought in a fair run of reassorting orders from the interior. In most of the lines traveling men are off the road and trade with jobbers shows up moderately. Dry-goods jobbers are 10 per cent. ahead in their sales for the six months this year, and other lines show gains of 5 to 10 per cent., the improvement not being up to early expectations, but is good, condsidering all drawbacks and moderately unfavorable crop prospects. New tonnage in finished products in iron and steel is lighter, except for merchant pipe and boiler tubes. Sales of structural material were 3,000 tons, and orders for over 7,000 tons are in sight. Little new business was closed in steel rails for 1908 delivery, but for light rails for this year's delivery a good inquiry prevailed. Premiums for spot pig iron are disappearing, as furnaces are catching up with their orders, and, although sales were larger than in the previous week, they were very light. Coal is selling freely, as railroads are favoring loading up with winter supplies. Lumbermen sold more stock, but high cost of materials restricts building operations. Groceries had a fair sale. Butter and potatoes advanced, but eggs are unchanged. Cattle and sheep brought higher and hogs lower prices. Receipts of cattle decreased and hogs and sheep increased. Banks have had six months of unusual prosperity and earned their year's dividends in the first half. Demand for money is better and rates are stiffer. Collections are fair.

INDIANAPOLIS.—Trade continues good and collections are fair to good.

LOUISVILLE.—There has been a fair business in leading lines of merchandise. Warm weather has increased retail trade considerably. Dry goods, clothing and shoes report a fair business for this time of year. Whiskey is seasonably dull. Collections are slow.

ST LOUIS.—Feeling in trade circles is better. Manufacturers of and jobbers in shoes report orders in excess of last year for future delivery, while the dry goods, clothing, hats and furnishing-goods lines report very satisfactory business during June and say that indications appear better for future deliveries. Retail trade is reasonably satisfactory. There seems to be a falling off in demand for builders' material, which would indicate some hesitancy on the part of those investing in new buildings. Collections are very good, considering the state of retail trade for the past sixty days.

KANSAS CITY.—Trade conditions show a steady improvement. Jobbers in leading lines report a marked increase in sales, and seasonable weather has benefited retail business. Collections are good.

MILWAUKEE.—Jobbers and retailers report a satisfactory trade. Collections are fair.

SIOUX CITY. — Trade is improving. The weather being seasonable, considerable building is being done.

DAVENPORT. — Retail trade is fairly good. Jobbers report a fair, steady trade, lacking in some cases the usual number of fill-in orders. A good demand for money prevails. Collections are still slow.

ST. PAUL.—Business in all lines is good and last year's sales are exceeded to date. Collections have been good and compare favorably with those of last year, allowing for the increased volume outstanding.

OMAHA.—Owing to seasonable weather general trade has improved very materially. Collections, however, are still slow.

LINCOLN.—The furniture trade is quiet, and other lines note a slight improvement. Collections are fair.

CHARLESTON.—Wholesale and retail trade continues good. The annual convention of the South Carolina Bankers' Association is now being held here, and the city has a lively appearance. Collections are slow.

RICHMOND.—Manufacturers, jobbers and wholesalers in hats, caps and kindred lines are active. Ordering has been liberal, and from present indications this season will be a profitable one. Wholesale dealers in dry goods have travelers out with fall samples, and ordering has been satisfactory. Filling-in orders are very light, but, on the whole, prospects are about as favorable as last year. Warm weather has given tone to retail trade and improved collections.

AUGUSTA.—Trade in all lines is quiet and collections are slow.

ATLANTA —Fall orders are coming in rather slowly, and the volume of business does not appear to be up to that of last year. Collections also are dragging.

MACON.—Trade and collections are dull.

JACKSONVILLE.—Lumber continues weak, but naval stores are firm. Trade shows dullness. Collections are slow.

BIRMINGHAM.—Southern foundry No. 2 pig iron is strong at $23 for immediate shipment, and very little can be had. Trade is good, but collections are slow.

MOBILE.—Country merchants are more liberal in placing orders for future delivery. A short crop is expected, but higher prices are looked for. Collections are poor. Hot weather stimulates demand for summer wearing apparel, and retailers are doing an active business. The $2,000,000 4 per cent. refunding Mobile bonds were purchased conditionally by the City Bank & Trust Company of this city and a New Orleans syndicate.

MONTGOMERY.—Trade in all lines shows some improvement owing to the favorable weather of the past ten days. Collections are slow.

CHATTANOOGA.—Some cessation is felt in the wholesale and retail trade, due to past unfavorable weather conditions and the approaching vacation

period. Collections are slower than in the corresponding period of last month. Building operations are falling off and material is in less active demand, while lumber is assuming a quiet tone.

MEMPHIS.—Business, wholesale and retail, is quiet. Retailers are working off summer goods at reduced prices. Drummers are preparing to start on the road.

NASHVILLE.—Retail and jobbing trade has responded with a rush to favorable weather conditions, and the restrictions of the spring months have vanished. Manufacturing and lumber are active, the increase in the latter trade over last year being fully 10 per cent. in feet and a greater percentage in value. Local prosperity is witnessed in the increase of street-railway valuations, as shown by a schedule filed with the railroad commission June 24, from $246,000 in 1905 to $397,000 in 1907. The increase over 1903 is more than 40 per cent.

LITTLE ROCK.—Trade in most lines is satisfactory, and the outlook is more encouraging than for several months past. Collections are fair.

NEW ORLEANS.—Retail merchants and department stores report a good volume of business. Jobbers are active on orders for current shipment and are booking desirable business for fall and winter. In the lumber trade there is still much complaint of car shortage at interior points. Collections are rather good and money is a trifle easier.

FORT WORTH.—Trade is fairly active, and collections are fair.

DALLAS.—Trade with both jobbers and retailers is quiet, and collections are slow.

WACO.—Jobbers report a fair business, with collections slow.

SAN FRANCISCO.—Settlement of the telegraphers strike seems remote at this date, but improvement in the street car situation has brought some relief to retailers. Collections are better.

SEATTLE.—Trade is steady, although there has been a falling off of orders from lumbering sections. Collections are fair.

SPOKANE.—Business is normal in all lines. Collections are about an average.

TACOMA.—Trade in all lines continues good. Collections are fair.

PORTLAND, ORE.—Business is active both at wholesale and retail.

TORONTO.—A good business is moving in all lines. Wholesale demand for summer lines is improving and fall business continues very heavy. All lines of dry goods are moving well and values are firm. Many lines of knitted and heavy goods are oversold. Shipments are heavy. Demand from the west is heavy. Ontario collections are generally good. From the west they are still slow. Country trade throughout Ontario is showing a good tone and the crop outlook is very encouraging. A report on the fruit crops promises a light crop of small berries and a medium to good crop of most other fruits. Plums will be heavy. From all manufacturing centers comes the report that there is no let-up in general activity. Boot and shoe manufacturers are doing a heavy business for the fall and winter trade.

MONTREAL.—General trade continues satisfactory. Retail business is well under way, and wholesale trade is showing further improvement in reorders. Dry-goods men report fall orders large. Demand for cottons is heavy and mills are working to full capacity. Woolens are rather quieter. Business in knit goods is very heavy and mills are unable to fill all orders. Orders for fall deliveries of blankets are so heavy that manufacturers may not be able to ship all required. All lines of building hardware are in heavy demand. Iron and steel are very active, with prices firm. Groceries are doing a good steady trade. Canned goods are firm. Collections are fair to good. While receipts and exports of cheese are somewhat heavier than they were earlier in the season, they still fall behind those of last year. Butter exports are very light, local demand absorbing all offerings. Hides have an easier tone. Wool continues firm, with offerings light.

VANCOUVER-VICTORIA.—General trade is good. Wholesale and retail lines are moving fairly well and provincial industries are generally active. There is some danger that shipping will be interfered with by the scarcity of coal. Labor is so badly needed in the mines that work is being retarded. The fruit-raising industry promises to show remarkable growth.

WINNIPEG.—Travelers returning from different parts of the country say the outlook for future trade is exceedingly bright, notwithstanding fears expressed regarding the harvest. Reports from all districts seem to confirm previous statements to the effect that the yield will be about an average one. Wholesale lines are moving well, and the sorting trade is better than at any time this year. Farmers are being tempted to hold their grain for high prices, and deliveries are not heavy. Collections are still somewhat slow.

FINANCIAL.

Money Market.

It was entirely natural that preparations for half-yearly interest and dividend disbursements accruing on next Monday, which this year reached the total of upward of $180,000,000, this amount being $20,000,000 in excess of the sum paid out for such purposes a year ago, while at the same time they are the largest for any July 1 on record, should create a hardening tendency in the New York loan market. Call money rose after the middle of the week to as high as 10 per cent, while time money continued very firm at an advance, collateral loans maturing after January 1 being 6@5¾ per cent. There was also rather more activity in time money in view of the higher rate for call loans. At the same time the market seemed, on the whole, to be more cheerful, which was due to the unexpectedly favorable bank statement of last Saturday, followed up, as it was, by indications that the $5,650,000 gold engaged on last Monday and Tuesday for shipment to London and Paris ended the specie outflow, at any rate for the time being. The decline in foreign exchange is also an influence, and it was furthermore noted that international bankers put out quite a large amount of finance bills, which was construed as indicating that not only had the foreign money market situation improved, but that European capitalists were reassured as to the position here and were once more willing to place funds in our market. Commercial paper continued to be very dull, the high rates discouraging the offering of any considerable amount of prime names.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending June 27 shows an aggregate of $2,405,051,000, as against $2,559,106,000 last week and $2,626,018,000 in the corresponding week last year. Canadian clearings for the week aggregate $78,536,000, as against $83,556,000 last week and $69,204,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	June 27	*Inc.*	*Dec.*	*June 20*
New York	$1,342,601,000	....	19.6	$1,457,833,000

New York Banks.

In view of the gold shipments made from New York to Paris during last week the bank statement of last Saturday was something of a surprise, inasmuch as it displayed a decrease of only $710,600 in the average cash of the Clearing House institutions. This could not be accounted for on any ordinary basis, and suggestions were heard that some latent or hidden reserves had been disclosed. Another feature of the showing was a reduction of $5,403,100 in loans, which apparently resulted from the transfer of borrowings from the banks to trust companies or other lenders. Deposits decreased $7,290,300, which was considerably larger than was called for by the above changes, and as a result the reserve required was $1,822,575 less than the week before. Owing to this, the surplus reserve increased $1,111,975 instead of displaying another decrease, as had been generally anticipated. The figures of the statement compare as follows with those of the preceding week:

	June 22	*June 15*	*Changes*
Loans	$1,134,352,800	$1,139,755,900	D. $5,403,100

Foreign Exchange.

Although sterling and other bills were a trifle easier at the opening of this week, the gold-shipping movement continued. On last Monday $4,650,000 gold was engaged for shipment to Paris, and on Tuesday $1,000,000 more was taken for London. These amounts make the total withdrawals since the present movement began on May 27 no less than $24,800,000, of which $2,750,000 has gone to London and $22,050,000 to Paris. Despite these operations the exchange market rapidly developed unsteadiness, and by Wednesday the rate for bankers' demand sterling had declined to around 4.87, a drop of some 40 points, which apparently made further gold shipments impracticable, especially as the Bank of England was known to have withdrawn its offer to allow interest on specie in transit. The supply of commercial bills continued to be rather light, but it was noted that finance bills again made their appearance in fair volume, it being known that sterling loans were being arranged by various Wall street interests. The inquiry for remittances also decreased materially, as arrangements to provide for interest and other payments due abroad on July 1 had been

generally concluded. At the same time the New York money market began to harden in anticipation of the July disbursements, the advance in the call-loan rate to 6 per cent. on Thursday causing demand sterling to drop to 4.86.75, while on Friday money touched 10 per cent. and demand sterling broke to 4.86¼. There would seem to have been a considerable short interest in exchange, the covering of which gave some support to quotations and caused irregularity in the fluctuations. A shipment of $500,000 gold to Canada on Friday was looked on as a special transaction.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

June 22	*June* 24	*June* 25	*June* 26	*June* 27	*June* 28

4.83.80	4.83.75	4.83.75	4.83.75	4.83.75	4.83.45

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.40 @ 4.87.45; commercial bills, 4.82¾ @ 4.83¼; francs, 5.20 less 1-32 @ 5.16 less 1-64; reichsmarks, 94¼ @ 95⅛ less 1-32.

The Bank of England's discount rate is unchanged at 4 per cent. Its weekly return showed a loss of £124,111 in gold, and the proportion of its reserve to liability fell from 47.30 per cent. to 42.73 per cent., there being an increase of over £5,000,000 in the loans. In the London open market the tone was somewhat easier, call money being 3½ @ 3¾ per cent. and discount 3¾ @ 3 11-16 per cent. The Bank of France reported an increase of 8,325,000 francs in gold and expanded its loans to the extent of 95,675,000 francs. Its rate is still 3½ per cent., the Paris market quotation for discount being 3⅜ per cent. At Berlin the bank rate is 5½ per cent. and the market 4¾ per cent.

New York Securities Market.

Beginning the week with a display of intense apathy and a minimum of transactions on the Stock Exchange, where only 138,000 shares changed hands on last Monday, the securities market rather unexpectedly developed not only a fair degree of activity during the last three days, but a considerable show of strength as well. Not only were advances scored throughout the entire stock list, but the transactions were better distributed than they have been for some time, that is to say, the dealings were not confined to only a few stocks, but embraced a large number of railroad and industrial shares, both of the standard sort and the specialties. This movement continued with practically no check until late on Friday afternoon, when the news that the subscription for $29,000,000 of New York City 4 per cent. was a virtual failure caused a sharp and general recession. The midweek change in the market's attitude has been the subject of a good deal of comment. In many quarters it was hailed as demonstrating that a reaction has begun against the recent prevalence of pessimism, the better feeling being based upon the continuance of good weather and crop reports, together with a more reassuring aspect as respects the financial situation, to say nothing of indications which are making their appearance that the indiscriminate anti-railroad agitation is losing ground. In the face of the shipment of $5,000,000 more gold to Europe in the first two days of the week, making a total of nearly $25,000,000 since May 27, money remained easy at first. It, however, began to harden in view of the preparations for the July 1 disbursements, call money running up to 10 per cent. This, however, was regarded as a temporary movement of interest rates, and Wall street viewed with much satisfaction the decline in exchange rates and the announcement that the Bank of England had withdrawn its offer of interest on gold while in transit, the impression being created that the gold movement for this season has ceased, the dispatch of $500,000 to Canada on Friday being evidently a special transaction. It is also noted that foreign bankers are again putting out money in the New York market, which not only helps the financial situation here, but is accepted as an indication that confidence in the essential soundness of the market's position is reasserting itself abroad. It would appear that covering by the extensive short interest which was left outstanding had not a little to do with the disposition of the market to rally. There was also some appearance of manipulation, though not on an extensive scale, and it would seem on the whole that both the quality and amount of outside buying for both speculation and investment improved in a moderate way.

Incidents of the week were scanty, but on the whole favorable. Rumors of a fresh bond issue by the United States Steel Corporation were emphatically denied. A very favorable report for the year ending April 1, issued by the American Car & Foundry Company, which is referred to in detail elsewhere, attracted considerable attention. The announcement that the control of the Central of Georgia property had been sold and that the Southern Railway would receive the price paid for the property resulted in a sharp advance in Southern Railway securities, accompanied by confident reports regarding the probable maintenance of full dividends on its preferred stock. Among the stocks which were most benefited by the improvement were Reading, Canadian Pacific, New York Central, Atchison and others of a same quality. The decline in copper prices had but little effect on Amalgamated, but the Interborough stocks were again a weak feature in the face of the general improvement.

Boston Stock Market.

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week ending June 22 and for the fifty-one weeks of the present season compares with similar periods one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
June 22, 1907	386,500	2,853,139	6,481,902	2,685,361
June 23, 1906	374,093	1,720,632	5,152,187	3,720,774
June 24, 1905	319,463	1,410,458	4,207,205	2,727,214
Season				
July 1, 1906, to June 22, 1907	20,469,674	246,010,831	211,469,764	198,582,419
July 1, 1905, to June 23, 1906	19,807,658	229,230,555	189,993,669	214,264,307
July 1, 1904, to June 24, 1905	16,681,010	205,195,047	180,685,782	159,351,352

Corn Exports, in Bushels.

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*June 21, 1907*	*June 14, 1907*	*June 22, 1906*
American	2,416,457	2,552,256	1,855,000
Other kinds	1,345,000	1,371,000	1,397,000
Total	3,761,457	3,923,256	3,252,000

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	June 21, 1907	*June 14, 1907*	*June 22, 1906*
Great Britain and continent	2,307,000	2,412,000	1,676,000
Egypt	89,000	97,000	83,000
India	781,000	759,000	930,000
United States	584,000	655,000	563,000
Total	3,761,000	3,923,000	3,252,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	26,754	37,816	54,304
Season	13,137,782	13,107,469	10,692,921

Boston Shoe and Leather Market.

The shoe and leather market is not expected to show much activity until after the July holidays. While heavy leather is more active, demand is hardly up to expectations. Sole leathers are well sold up, particularly the better grades. Shoe manufacturers are receiving some orders, but buyers are still backward as to amount of business placed. Shipments are satisfactory for this time of year. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 86,324 cases; preceding week, 101,816; last year, 84,709; total for 1907, 2,374,830; total for 1906, 2,450,427; decrease, 75,597.

Wool Markets.

There is a better feeling in the market, as manufacturers are showing more interest in the new clip wools, but trade is still rather quiet. New fleece wools, especially delaines, have been in good movement, washed selling at 37 cents and unwashed at 30 cents. About 500,000 pounds quarter-blood fleeces sold at 30 cents, the same price at which the old quarters were cleaned up. Old consigned territory wools have been cleaned up at 68 cents scoured for anything 40 to 50 per cent. staple, and 65@66 cents for shorter staples. New shorn territories are arriving, and while not as short staple as was predicted, are shorter than in former years. Wyoming, Idaho and other new wools are being sampled freely, and new Texas has sold at 23@24 cents for eight months and 27@28 cents for twelve months to arrive. The interest now centers in Montana, where the clip is estimated at 32,000,000 pounds against 36,000,000 pounds last year. Of this, from 10,000,000 to 12,000,000 pounds have been sold or contracted for, with the latest sales at 21@23 cents for ordinary and 23½@24 cents for choice. The Kerrville sales, with 500,000 pounds eight months sold at 22⅝ cents and 250,000 pounds twelve months at 25 cents, cleaned up the new Texas wools. California is well sold up. Foreign wools are in quiet demand in the Boston market for 50s and above; quarters are neglected; low wools are in fair demand. Fine merinos are scarce, and are held firmly for higher prices. The trade is now waiting for the London sales, which will open July 9. The offerings there will be 150,000 bales, but there will be little wool of quality suitable for America.

COALITE, A NEW FUEL PRODUCT.

Consul F. W. Metcalf forwards from Newcastle a British newspaper statement about a new fuel prepared from coal, for which the following extract points to an extensive use:

"A good deal of interest has been centered in 'coalite,' which is a bright, hard substance, very similar in appearance to the best coke, and in burning it makes no smoke and gives off, it is asserted, something like twice the heat of coal, while a coalite fire lasts 40 per cent. longer than an ordinary coal fire. This coalite is produced by a process similar to that employed by the gas companies for the production of coke. In the case of the gas companies, coal is treated at a high temperature, the gas and by-products being collected and the residue being coke, but by the coalite process the coal is treated at a much lower temperature, with the result that the gas obtained is much richer. The by-products are also richer, and the residue, instead of being coke, is coalite, which can be easily lighted, and burns with great steadiness and economy.

"For household purposes it appears to have a special value, in virtue of its cleanliness and its heating power. This is now fully recognized in London, where the prospect of abating the smoke and fog nuisance is hailed with no small satisfaction. The King has been impressed with its qualities, and instructions have been given at Buckingham palace to have the cellars swept clear of all coal and nothing but coalite put there for the future. Out of a ton of coal about 70 per cent. of coalite is extracted, but its calorific power being much greater, the ton may be said to have suffered no loss in value, while at the same time the gas and the vast range of by-products have been extracted.

"The process, moreover, can be applied to all bituminous coals. Contracts have already been entered into with the leading coal merchants for the sale of over 2,000,000 tons of coalite per annum for consumption in London only."

THE TREASURY AND THE MONEY MARKET.

George E. Roberts, Director of the Mint, writing for the *North American Review*, declares that "the operations of the Treasury are growing in magnitude every year, and the difficulties inherent in present methods become correspondingly greater every year. Receipts and disbursements are each approaching $1,000,000,000 a year. If this vast sum flowed through the Treasury in a steady stream, its management would be a comparative simple matter; but the greater its volume the greater are the possible fluctuations and possible differences between receipts and disbursements, and the consequent difficulties in managing the surplus. The people of nearly every other important commercial country of the world have worked these problems out to their satisfaction, and it is a significant fact that they have all come to practically the same system.

"The French have intrusted to the Bank of France, a semi-official institution with a capital of 182,500,000 francs, these functions, which they have deemed it impracticable for the Minister of Finance to discharge; and the management of French finance has been the admiration of the world. The Germans are as hard-headed in business affairs as any people in the world, and they have intrusted these functions to the Imperial Bank of Germany, with a capital of 180,000,000 marks, of which the Chancellor of the empire is the official head. The Japanese are recognized as thorough in whatever they undertake. They copied our system of national banks in 1872, providing circulating notes based on deposits of government bonds; but they have since established the Bank of Japan, modeled after the Imperial Bank of Germany, and made it the only bank of issue and the agency through which the government conducts its fiscal operations. Russia, Austria Hungary, Italy, Spain, the Netherlands, and all other European countries manage their fiscal affairs in a similar manner.

"The services of the Bank of England to the British government are well understood, but its system of note issues is generally recognized as inferior to that of the Imperial Bank of Germany. These great semi-official institutions, by which other governments correlate their treasuries to the business world, are performing their functions satisfactorily. Why may we not profit by their experience? Whenever a great central banking institution is proposed for the United States, the common response is that we tried it once, and hence it is useless to make another effort. It is said that such an institution is an appropriate agency for a monarchy, but out of place in a republic—that it would be controlled by Wall street or drawn into politics, and that it would be antagonistic to our system of independent banks.

"A central bank for this country which served only as a connecting link between the Treasury and existing state and national banks would not hold the commanding position of the Bank of France and the Imperial Bank of Germany, but the general plan upon which they are organized suggests how most of the objections to such an institution could be met. Suppose its stock to be held by national and state banks in proportion to their capitalization; allow the stockholders to select a board of directors, similar to the board of regents of the Bank of France, but let them be elected by territorial districts, so that every part of the country would be represented in proportion to its holdings; create an executive board of, say, five, of which the Secretary of the Treasury, the Comptroller of the Currency and the Treasurer of the United States would be three, the other two to be chosen by the directors, the executive board to determine the general policy of the bank; let the executive officers be named by the Secretary of the Treasury from a list submitted by the board of directors; require the bank to have at least one office in every state, and let the stockholders within a defined territory tributary to each branch select an advisory board for that office, and submit a list of names from which the managers should be appointed; let a corps of inspectors or auditors be appointed, in part by the Secretary of the Treasury and in part by the board of directors, to examine all offices at frequent intervals.

"Through its branches the funds belonging to the Treasury which it was desirable to have returned to circulation could be placed by loan in any part of the country, and wherever placed the profits would belong to all the stockholders, subject to any division with the Treasury that might be provided for. The loans should be rediscounts, restricted to short-time paper arising from the movement of staple commodities to market, and being constantly liquidated.

"Through the funds under its control and the note-issuing power given it, the central institution would be able to come to the aid of any bank in the system, provided such bank was worthy of assistance. No sound banking institution in the system need ever fail after the central bank was established. The weakness of our banking system to-day is in the isolation of the individual units. When a real crisis comes the situation is likely to be aggravated by the efforts of individual banks to strengthen themselves, and by the failure of the unprepared. An effort is made in the cities to remedy this isolation by coöperation through the clearing-house associations, and the benefits of closer relations in time of stress have been experienced repeatedly.

"The central institution would be a bond of union for both state and national systems, and would virtually place the resources of the government behind them whenever the public welfare was concerned. The existing banks would not be disturbed, but they would be federated for certain purposes. If the profits of the central institution were divided with the Treasury, after the plan of the Imperial Bank of Germany, the returns upon the stock would not be large, but the security afforded to every bank in the system would make it an object for each to take its quota. Finally, the note-issuing power vested in the central bank would give this country a degree of independence of conditions abroad which it does not now have.

"Six months ago notice was virtually served on New York bankers that the taking of gold from London at that time would be regarded as an unfriendly act. An untoward event abroad which would create a demand for ready money might at any time cause the return of such quantities of American securities as to occasion gold exports from New York, and there is no assurance that such demands will consult our convenience. They might fall imperatively upon a situation already strained to the limit. During the last two years there has existed the possibility of collapse of Russian securities which would force liquidation in every market of Europe."

THE PRESENT POSITION OF THE ZINC INDUSTRY.

"During the last few years, especially during 1906, conditions have been developing in the zinc industry of the world which are of supreme importance. This relates particularly to the enormous increase in the supply of ore offered to the smelters," says the *Engineering and Mining Journal*. "New South Wales and Mexico, the former gradually and the latter suddenly, have developed into producers of zinc ore of the first magnitude. The production of zinc ore in New South Wales in 1906 amounted to 102,650 long tons, against 103,000 long tons in the previous year; but going behind the face of the returns, it appears that there was a considerable increase, because of the better grade of the ore produced in 1906, the estimated yield of spelter from the ore exported having been 33,427 tons in 1906, against 30,637 tons in 1905. American smelters received from Mexico 88,900 short tons of ore in 1906, against 32,164 in 1905, and practically none in 1904. Some Mexican ore also was exported to Europe. Besides these large new supplies, European smelters have been recently obtaining a good deal of ore from other new countries, such as Japan (where zinc-smelting works are now being erected) and Turkey; while in 1906 a considerable supply of calamine ore of high grade was for the first time received from Rhodesia, where there appears to be large deposits, which will afford a steadily increasing output.

"This plethora of raw material has already had an important effect upon the world's market for spelter. For one thing, it has cut off all hope that the United States will soon become an exporter of spelter. On the contrary, it is to be feared that, more frequently than usual, the price of spelter in the United States will have to be reduced in order to prevent importations, in spite of the protective tariff of 1.5 cent per pound. During the last three or four years the prices for spelter at London and New York have been showing an increasing disparity; at present there is a difference of about 0.8 cent per pound. This is easily explained by the position of the European smelters, who in the abundance of their ore supply are able on the one hand to offer spelter at lower and lower prices, and on the other hand bid lower and lower prices to the miners for ore, preserving a large margin for smelting all the time. During 1906 the smelters' margin was so large that the business was unusually profitable. The natural result of this, together with the refusal of the smelters to accept certain supplies of ore, has been to lead several of the mining companies, together with other metallurgical companies, to go into the smelting business on their own account. At the present time there is something like an epidemic in the construction of new zinc-smelting works in Europe. In Silesia and the west of Germany it is reported that six large smelting works (one of which has recently gone into operation) are under construction; one or two new smelters are being built in France; a large works is under construction in Great Britain, and another one is contemplated. A new works was lately completed in Australia, making two now in that commonwealth, and a works is to be built in Japan.

"Some of the new works that are being erected in Germany occupy locations which give them much better facilities for the transportation of ore by canal and river from Rotterdam and Antwerp than any other works in Germany at present possess. Consequently, there is no doubt that some of these new works will capture a good deal of the business of smelting foreign ore. Naturally, the situation is viewed with a good deal of alarm by the existing concerns. The increased competition will doubtless reduce smelting prices to a normal level, and the hope of great profits from the new enterprises, based on existing conditions, probably will fail of fulfillment for that reason. However, the effect on the American market will be obvious. With large supplies of cheap ore, and competition among the European smelters that materially reduces their margin for smelting, there is little likelihood that American smelters will have any opportunity to export spelter; in other words, the conditions in Europe will tend to keep the London price steadily below the price in America. As regards the situation in Europe, looking toward the more distant future, the hope will be that the new works will produce no more than to satisfy the annual increase of the demand, while the old works will maintain their present production. This is the most optimistic view that can be taken. Anyway, the change in conditions is not likely to be sudden, inasmuch as only a small portion of the new smelting capacity will go into operation during 1907.

"It may be remarked that the United States also will have a considerable increase in smelting capacity in 1907."

BUSINESS FAILURES.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JULY 6, 1907.

One of the noteworthy incidents of the recent proceedings at The Hague was the presentation to the first committee of the conference by Mr. Joseph H. Choate of the American proposition for the exemption of all private property except contraband from capture on the high sea. Mr. Choate's speech was a masterly historical survey of the attitude assumed by the United States in relation to the matter since the beginning of its diplomatic history. The great republic of the west, he said, had earnestly urged the adoption of the principle in the first days of its existence as a free and independent country and now hoped to see it included in the permanent law of civilized nations. The address of the American delegate made a decided impression, which was not effaced by a brief statement in disapproval of the doctrine by M. Nelidoff, the president of the general body, who was present. It appears, however, that some opposition to the doctrine has developed among the Latin-American representatives, whose countries, having no merchant marine to speak of, think that the abolition of the right of capture will deprive them of an expedient dreaded by their enemies. It is now believed that France will follow the lead of the chief Russian delegate in declaring against the doctrine of inviolability of private property contended for by the United States.

While it seems possible to take two views of the recent action of the Board of Police Commissioners of San Francisco in denying the application of certain Japanese for the renewal of their permits to keep intelligence offices, the taking of such action at the present juncture is to be regretted. Coming so soon after the incidents growing out of the School Board's regulations and the late attack on the Japanese restaurant, it cannot be said that the time was well chosen for raising this further question. It is understood that the police authorities base their action upon an ordinance prohibiting the grant of such licenses to persons who are not citizens or who have not declared their intention to become citizens. A dispatch from Washington indicates that the Japanese embassy there is satisfied that no discrimination against the Japanese as a race was involved in the action of the local authorities, while another from San Francisco intimates that the Japanese consulate there is still investigating the incident, as indeed is the federal attorney there. While the Japanese government and the administration at Washington are displaying such a careful and considerate temper in dealing with incidents of this sort, they can probably produce little effect, but having regard to the sensitive condition of public feeling in Japan, they can be productive of no good. They are much more likely to cause irritation than such an occurrence as the seizure of the Japanese seal poachers at the Pribiloff Islands, reported a couple of days after the San Francisco Police Board's action.

How the situation is regarded in Japan by a section of the people not prone to take offense unduly may be gathered from a noteworthy address to the principal chambers of commerce in the United States which was framed at a joint meeting of a number of such bodies in Tokio. Referring to the previous incidents in San Francisco, the Japanese chambers express regret at their occurrence, coupled with the apprehension that unless such acts are speedily stopped the ill feeling which the people of the island empire are now constrained to harbor against the people of a single section in America may eventually have an unhappy effect upon the development of the commercial relations between the two nations. The commercial bodies in the United States are appealed to to use their efforts for the amelioration of the situation in the interest of friendly national intercourse and trade relations. A somewhat similar memorial has been sent to President Roosevelt, whose personality has apparently impressed the people of Japan. An address such as this seems calculated to serve a useful purpose, as affording an opportunity for a non-diplomatic exchange of sentiment which may be of more service to the two countries than perhaps a strictly diplomatic exchange would be.

Under the new federal immigration law which went into effect on Monday, the head tax on immigrants is increased from $2 to $4, and it is to be assessed on all aliens entering the United States, except such as have resided in Canada, Newfoundland, Cuba or Mexico for one year immediately preceding their application to enter. The law adds to the excluded classes imbeciles, feeble-minded persons, those afflicted with tuberculosis, those certified upon medical examination to be physically or mentally defective to such an extent as to be unable to earn a living, women and girls coming into the United States for immoral purposes, persons who procure them for such purposes, and persons who admit themselves guilty of crime. The decision of a board of special inquiry is made final as to the rejection of aliens afflicted with diseases of a contagious or loathsome nature, with tuberculosis or with physical or mental disability. The sum of $50,000 is made available for a more careful enforcement of the alien contract labor laws. It is to be hoped that the new law will have the effect of further barring out undesirable immigrants, who have seemingly come over in considerable numbers of late years notwithstanding the efforts made to exclude them.

The latest information regarding the status of the negotiations touching commercial relations with France comes in a cablegram from Paris. In answer to an interpellation in the French Senate on Thursday, M. Pichon, the Foreign Minister, said that an arrangement with the United States would without doubt be soon concluded. He said that he had asked the government of the latter country to recognize that the advantages conceded to German commerce were due to France under previous treaties, and that the Washington authorities had not refused to extend to France an arrangement like the one concluded with Germany. One difficulty in the way of a final understanding lay in the question of the regulations of the French chambers of commerce, but, M. Pichon added, the French explanations on the subject were believed to be satisfactory. Complications appear to arise out of the existing system of declarations under which goods are held up for a long time, while there are varying opinions as to their value. Meanwhile the French government, according to M. Pichon, is doing its utmost to develop the commercial relations between the two countries.

Last month witnessed a marked decrease in circulation, as the result of which the amount per capita fell to a point below any reached since March 1. The decline for the month amounted to over $25,400,000. Most of the changes during the month were trifling, the marked exceptions being a decrease of over $27,600,000 in gold certificates and an increase of a little over $2,900,000 in gold coin. For the twelve months there was a net increase of over $169,800,000. The aggregate amount of money in circulation on July 1 was $2,914,342,256. On the basis of a population estimated by the Treasury experts at 86,074,000, this represents a per capita circulation of $33.86, a decrease of 34 cents as compared with the preceding month, but an increase of $1.44 as compared with July 1 last year. Comparing with recent dates, it may be said that the amount per head of population at the beginning of the current month was 30 cents less than that on May 1 and 5 cents less than on April 1, though it was 9 cents more than that on March 1 of the present year.

Judging from the action of the Illinois railroad officials no effort will be made by them to prevent the operation of the two-cent fare law at present. It was announced on Monday by the General Passenger Association and the Western Passenger Association, which include nearly all the railroads in the state, that the rate provided by law would be effective on all state traffic. It seems to be the policy of the railroad officials to submit to the new rate for a time at least, and to base any protest they may wish to make against the enforcement of the law upon the conditions disclosed by operation under it. In case the operation under the law should result in a deficit, they will, of course, ask that its enforcement be enjoined. In the meantime interstate rates now in effect will be maintained under the federal rate law until a new tariff shall have been prepared.

It is comforting to learn from a cable dispatch from Chief Engineer Goethals of the Panama canal that everything is going on well and harmoniously on the isthmus, and that there is no truth in the reports that he or the other army officers serving under him have any desire to withdraw from the work. In that respect it is to be hoped that Colonel Goethals will be able to reverse precedent. It is understood that he has arrived at the conclusion that it will be advisable to divide the work on the canal into sections and classes and to let contracts for such portions of the work. His idea is to make use of the form of contracts under which the river and harbor work done under the supervision of the army engineers is generally carried on; that is, contracts of a limited and specific nature. Contracts of this kind, he believes, will not impose a responsibility greater than can be borne by an individual contractor, while from their nature they permit of more accurate specifications and of a closer and more effective supervision of their execution. These conclusions will be submitted to Secretary Taft in the near future and are likely to be submitted in the report to be laid before Congress in December.

SIX MONTHS' FAILURES FEW, BUT LIABILITIES LARGE.

There were 4,792 failures reported to BRADSTREET'S for the first six months of 1907, involving liabilities of $76,529,059 and assets of $42,018,143. This is a decrease in number of 1.6 per cent. from 1906, of 8.5 per cent. from 1905 and 10.2 per cent. from 1904, and is almost identical with the number reported in the first half of 1903. With this exception the number of failures is the smallest reported in the first half of the year since 1882. As regards liabilities, however, the showing is very different, owing to the occurrence of a number of relatively large suspensions this year. Thus the liabilities in 1907 are 30 per cent. larger than in 1906, 22 per cent. larger than in 1905, but 8 per cent. smaller than in 1904. Compared with 1903 liabilities are 27 per cent. larger, and, with the exception of 1904, liabilities this year so far are the largest since 1897. The high percentage of assets to liabilities for the half year—54.8 per cent. in 1907, as against 49.1 per cent. in 1906 and 55.1 per cent. in 1904—may be regarded as indicating a relatively greater proportion of strain upon otherwise solvent concerns, due to difficulty in obtaining needed financial accommodation.

Following are the statistics of business failures in the United States in the first half of each calendar year from 1879 to 1907, inclusive:

	Number failures	*Estimated assets*	*Total liabilities*	*Per cent. of assets to liabilities*
1907	4,792	$42,018,143	$76,529,059	54.8
1906	4,873	29,037,133	59,081,289	49.1
1905	5,241	33,224,848	62,686,427	53.0
1904	5,338	45,878,407	83,235,171	55.1
1903	4,730	29,629,703	60,251,563	49.0
1902	5,262	27,018,862	56,927,688	47.4
1901	5,465	32,435,338	66,138,362	49.0
1900	4,880	27,475,514	60,064,208	45.7
1899	5,049	22,890,645	50,304,253	45 5
1898	6,429	36,606,918	72,120,341	50.0
1897	7,024	53,611,782	93,656,495	57.0
1896	7,602	60,495,568	105,535,936	57.0
1895	6,597	44,153,644	79,707,861	55.0
1894	6,528	44,970,825	82,555,339	54.0
1893	6,239	105,371,813	170,860,222	61.0
1892	5,351	28,035,106	56,535,521	51.0
1891	6,037	48,206,896	92,370,282	53.0
1890	5,466	30,025,116	62,867,962	48.0
1889	5,018	32,803,940	67,411,711	48.0
1888	5,254	34,834,746	64,987,622	53.0
1887	5,072	25,643,108	52,778,829	48.0
1886	5,461	25,509,317	53,241,432	48.0
1885	6,106	32,955,495	68,570,505	48.0
1884	5,444	70,730,078	124,104,357	56.0
1883	5,296	39,887,202	73,594,205	54 0
1882	3,649	27,329,765	52,383,289	53.0
1881	3,256	19,783,523	39,533,705	50.0
1880	2,399	14,727,907	31,837,393	46.0
1879	3,810	29,690,478	60,508,756	49.0

Examination of the detailed figures of failures by groups of states shows there were 464 fewer failures in the second as compared with the first quarter of the year, a drop of 17 per cent., but the decrease in liabilities was less than 1 per cent.; and while the first quarter showed a decrease of 5.8 per cent. from a year ago in the number of failures, the second quarter showed an increase of 4 per cent. Evidences of greater relative strain in the second quarter are also found in the fact that liabilities in that quarter increased 58 per cent. over a year ago, while the increase in the first quarter was only 10 per cent.

Three sections of the country show more failures in the past six months than in the same period a year ago. These are the middle states, the south and the territories. An increased number of failures in Pennsylvania and New York explains the first, while Maryland, South Carolina, Georgia, Alabama and Mississippi report more failures in the second group mentioned. In liabilities, the heavy increase—$19,000,000 in New York and $5,500,000 in Pennsylvania, due to a few heavy failures—accounts for the large increase in all liabilities shown over a year ago, more than counterbalancing considerable decreases shown in New England and the central west.

Large failures were, as above intimated, more notable in the first half of this year than a year ago. There were 114 failures in which the liabilities exceeded $100,000 each, and the aggregate of the losses foots up $40,876,000. In the same period a year ago there were only eighty-nine failures, with aggregate liabilities of $23,779,973; in 1905 there were seventy-six failures, with $27,173,384 of liabilities, and in 1904 there were 137 failures, with $46,647,371 of liabilities.

BUSINESS FAILURES, UNITED STATES, CANADA AND NEWFOUNDLAND, FOR SIX MONTHS, 1907 AND 1906, WITH ASSETS AND LIABILITIES.

Thus 1907 takes rank next to 1904 as regards the number and extent of damage proceeding from large failures. This year, as in the first half of 1906, the rarity of bank suspensions is worth noting. Thus in six months of the present year only ten large financial suspensions were noted, involving $4,554,000. Last year, in the first half, there were ten such also, with liabilities of $4,107,184. In 1905 there were seventeen, with $9,430,500 of liabilities, and in 1904 there were thirty-three, with $17,906,652 of liabilities. While bank failures were few, however, suspensions of other large concerns were numerous. The last month of the year saw some few failures of large contractors and builders which went far to swell the grand total of large failure damage. The largest single failure of the year was of this sort, and it is worth noting that about one-fourth of the six months' liabilities proceeding from large failures were of contractors and builders. Otherwise the large failures do not display any particular strain or weakness in any one direction.

New York City had 712 failures in the first six months, an increase of 3.6 per cent. as compared with 1906, but liabilities reached the very large total of $27,197,110, a sum three times as large as that reported in the first half of last year. The second quarter of this year was largely responsible for the increase in the failures, because failures in the first quarter fell off 10.7 per cent. in number, whereas they gained 20 per cent. in the second three months. Liabilities in the first quarter were two and a half times those of the same period of 1906, while in the second quarter they were more than four times as large.

Canadian failures for six months number 573, with liabilities of $4,185,211 and assets of $1,909,995. There is here shown a decrease of 12.3 per cent. in the number and of 21 per cent. in the liabilities from the exceptionally favorable showing made in the first half of 1906.

DECREASING BANK CLEARINGS TOTALS.

Bank clearings returns to BRADSTREET'S for June point to a further recession in the volume of speculation, particularly in securities, and likewise to a seasonable quieting down of business. Results of this are shown in the smallest monthly total of New York City clearings reported since September, 1904, and the grand total for the entire country is the smallest for any month total since September, 1905. For the country outside of New York the clearings are the lightest since February, and, with that exception, the smallest since 1906, though, unlike the New York City totals, the totals outside show gains over every preceding June. Following are the aggregates of clearings monthly at all cities, compared with the same periods in five preceding years:

[Six figures omitted.]

The total clearings at ninety-seven cities for June aggregate $11,077,860,698, a decrease of 9.7 per cent. from May, and of 8.9 per cent. from June, 1906, but an increase of 2.9 per cent. over June, 1905. New York City is primarily responsible for this shrinkage, showing, as it does, a total for June of only $6,369,172,964, a decrease from May of 13 per cent., a decline of 18.5 per cent. from June, 1906, a loss from June, 1905, of 5.4 per cent., and, as above stated, the smallest monthly total at New York since September, 1904. As for the reasons for this falling off at New York, it might be said that June sales of stocks on the New York Stock Exchange were the smallest for any month since June, 1904, while the sales of bonds were the smallest for any month since September, 1900. The total clearings outside of the metropolis (at ninety-six other cities) aggregated $4,708,687,734, a decrease of 4.6 per cent. from May, but an increase over June a year ago of 8.2 per cent., and to this extent the largest June clearings ever recorded.

For the half year ended with June the clearings at ninety-seven cities aggregated $77,028,848,419, a decrease of 3.3 per cent. from the high record total of the first half of 1906. New York City's clearings for the half year aggregated $47,903,013,985, a decrease of 9.6 per cent. from 1906, while at the ninety-six cities outside of New York the clearings aggregated $29,125,834,434, a gain of 9.4 per cent. over the same time in 1906.

Following will be found the gains or losses, by groups, shown in June and the six months, as compared with the same periods a year ago:

	June		Six months	
New England	Decrease	.3	Increase	4.9
Middle	Decrease	16.7	Decrease	8.6
Western	Increase	15.4	Increase	10.2
Northwestern	Increase	15.3	Increase	14.6
Southwestern	Increase	14.8	Increase	15.0
Southern	Increase	4.2	Increase	3.9
Far-western	Increase	24.1	Increase	26.9
Total, United States	Decrease	8.9	Decrease	3.3
New York City	Decrease	18.5	Decrease	9.5
Outside New York	Increase	8.2	Increase	9.4
Canadian	Increase	5.5	Increase	9.7

Two groups, the middle states and New England, showed decreases in June, the latter decrease being very slight. The far west gained 24 per cent., and the western, northwestern and southwestern in the neighborhood of 15 per cent. each. The south gained only 4.2 per cent. In the six months' compilation the south shows the smallest gain—3.9 per cent.—while the middle states group shows the only loss.

Canadian clearings for June aggregated $341,133,483, and for six months the total was $2,018,613,077, gains of respectively 5.5 and 9.7 per cent. over the same periods of 1906.

THE UNCERTAIN EXCHANGE POSITION.

Although the July 1 disbursements for interest and dividends upon corporate and other securities were the heaviest on record for such a period, amounting as they did to upward of $180,000,000, there was less disturbance in the money market at New York and other cities than might have been expected under such circumstances, also taking into consideration the arrangements to return $30,000,000 of government deposits from the national banks to the Treasury. While call money at New York this week touched as high as 15 per cent., the loan market on the eve of the Fourth of July holiday reverted around to 6 per cent. It is generally thought, in fact, that the payment of the bulk of the $36,000,000 of maturing 4 per cent. United States bonds will be completed within the next fortnight, although, as is usual in such cases, a certain proportion of that issue will remain outstanding and unredeemed for some little time, particularly where the bonds in question are deposited as security for outside matters by trustees and others. Receipts of currency from the interior are, of course, apt to be somewhat slim during the next few weeks, this being the customary course at the present period of the year. At the same time the call money market has witnessed no strain, although there has been on the other hand continued firmness in regard to time loans and mercantile discounts, the minimum for arrangements on collateral running for periods until after the first of January, 1908, commanding from 5¾ to 6 per cent., with proportionately high rates for shorter time loans.

The feature of the situation in the money market which has attracted most attention has been the renewed strength of foreign exchange. Demand sterling soon after the beginning of the week recovered a large part of the preceding break, and has been quoted at as high as 4.87.10. While the advantage of having interest allowed on specie in transit by the Bank of England has been withdrawn, and while, moreover, the Bank of France no longer shows any special eagerness to attract gold to its vaults, on last Tuesday a shipment of $1,000,000 gold was arranged by two New York banking houses, the peculiar feature of the transaction being that the destination of the amount was Amsterdam, instead of either Paris or London. Moreover, the gold itself consisted of American double eagles, and it was stated that the consignee had requested that it be made in this form. The matter has been attended with more or less mystery, although it would seem to have been fully justified by the prevalent condition of the exchange market. In this case is probably seen another illustration of the so-called triangular operations whereby Amsterdam, instead of taking gold direct from London in settlement of accounts, has been paid by bankers at the latter center by means of withdrawals of specie from New York.

A RECORD YEAR FOR GOVERNMENT RECEIPTS.

With the heaviest total of receipts in the history of the government and the largest amount of revenue from customs thus far realized in any twelve months, the fiscal year just closed set new records in more than one particular. The total receipts for the year amounted to $665,306,134, which exceeded by over $70,000,000 those for the preceding fiscal year, up to that time the record twelve months for receipts. The

receipts from customs amounted to $333,230,126, which was almost $33,000,000 in excess of those for the preceding fiscal year, hitherto the record year for that branch of the revenue. The internal revenue receipts were also heavy, amounting to $270,309,388, which was over $21,000,000 in excess of those for the preceding fiscal year, and has been exceeded only five times in the history of the government, and then only as the result of extraordinary legislation to pay war expenses.

The expenditures for the year, though heavily overtopped by the receipts, were still among the largest in the Treasury records, having been exceeded only in the fiscal years 1899 and 1904 in recent years, and in the years 1863, 1864 and 1865 of the civil war period. The total expenditures amounted to $578,360,592, which represents an increase of a little over $9,600,000 as compared with those for the preceding fiscal year. As was the case in that year, the provision for pensions was the heaviest in the list, amounting to $139,290,210, though this sum represented a decrease of a little over $1,700,000 as compared with that for the preceding year. Civil and miscellaneous expenditures were next in amount with a total of $124,117,119, an increase of a little over $4,000,000 as compared with those for the preceding year. Expenditures on account of the War Department came next in order of amount with a total of $101,671,881, representing an increase of over $8,000,000 as compared with those for the preceding year. Navy expenditures, amounting to $97,606,595, showed a decrease of over $13,300,000, while those for public works, amounting to $76,051,271, exhibited an increase of over $10,900,000. The disbursements on account of Indians amounted to $15,140,292, showing an increase of over $2,390,000, while those on account of interest, amounting to $24,482,524, showed only a trifling increase, viz, $172,198.

A considerable surplus was looked for from the beginning, but few imagined that it would reach the proportions it attained. Ex-Secretary Shaw estimated that the fiscal year would show an excess of receipts amounting to $58,000,000, but the actual excess amounted, as will be seen by a comparison of the figures on both sides of the account, to $86,945,542. This was the largest surplus since the year 1889, with the single exception of the year 1902, when it was exceeded by a little over $4,300,000. In the immediately preceding Treasury year, as may be recalled, there was an excess of expenditures over receipts amounting to over $26,100,000. In other respects also the Treasury's position is a strong one. The available cash balance at the close of the fiscal year was $264,734,753, of which $78,585,127 was actually in the Treasury, while the remainder was on deposit to the credit of the United States in national banks or to the credit of disbursing officers of the government. Of course there is another side to the showing. So large a surplus is not in itself a desirable thing, and its existence presents a problem for the solution of which a demand will be made upon the administration and upon Congress when the latter body reconvenes in December.

A BRITISH STEEL COMBINATION.

While considerable attention has been paid to the news that it is proposed to bring the leading steel-manufacturing establishments of Great Britain into a combination, it does not appear that American steel interests look upon the matter as in any way dangerous or inimical. Wall street, which would naturally be sensitive to anything which promised increased competition with our own steel industries, has in fact disregarded the announcement, and the shares of the United States Steel Corporation have in the past week shown an advance, in sympathy with the rest of the market. The new combination, it seems, moreover, is to be more in the nature of a cartel or mutual agreement, such as exists among the steel-manufacturing establishments of Germany, whereby prices are made uniform and competition is effectually regulated, than of a holding corporation like our own United States Steel Corporation. It has been pointed out that such a union on the part of the British iron and steel manufacturers was necessary. During recent years there has been more or less disorganization in the trade there, and that the manufacturers should finally come together with a view to regulating prices and output, and thus securing better conditions, was almost inevitable under the circumstances. From an international viewpoint this would seem calculated to benefit, rather than harm, the steel industry of the world, and would tend to create greater stability in prices and a decreased susceptibility to violent fluctuations in both iron and steel.

It may be noted, however, that some rather exaggerated statements have been afloat in regard to the purposes and effects of the move on the part of the owners of British steel industries. It has, for instance, been asserted that the aim of those who are engineering the combination is not only to control the trade in Great Britain, but to dominate steel manufacturing throughout the world. Even a slight examination would show the impossibility of anything of that nature, even if it were seriously contemplated, which may well be doubted. So far as the United States is concerned, its supremacy, not only in the extent of its output of iron and steel, but in the possession of enormous iron-ore supplies, compared with scanty ones in Great Britain and other countries, would put such a question immediately at rest. It may be pointed out that in 1887 Great Britain produced 7,559,518 tons of pig iron, against 6,417,148 in the United States and 4,023,953 by Germany. In the year 1906, however, Great Britain's pig-iron production was 10,100,000 tons, compared with 25,307,000 tons by the United States and 12,300,000 tons by Germany. In twenty years the American production has increased over 500 per cent., that of Germany 230 per cent., while in the case of Great Britain the gain amounts to about only 35 per cent. In regard to ore supplies, the position of the British iron and steel industry is plainly revealed by the fact that in 1906 the domestic output of ore was 15,054,000 tons, and the ore imported amounted to 7,823,000 tons, or over half of the total consumed. In other words, Great Britain imported 50 per cent. of its ore supply, while the amount of imported ore used by the iron industries of the United States was less than 5 per cent. of the total. There is, therefore, apparently nothing in the situation which can be materially changed to the disadvantage of American iron and steel industries by the proposition on the part of the manufacturers of Great Britain to enter into such a combination as is now reported to be under consideration.

EDITORIAL NOTES.

Some surprise was occasioned by the announcement made this week that the management of the Wabash Railroad had declared a dividend of 6 per cent. upon its $3,500,000 of series A income debentures, as well as an initial dividend of 1 per cent. upon the $26,500,000 of series B debentures. It will be recalled that the last payment on the series A bonds was 3 per cent., in 1904, and that since that time the bulk of the debentures of both series have been exchanged for the new refunding 4 per cent. bonds, there being at this time only about $3,500,000 of the series B and $500,000 of the series A incomes outstanding in the hands of the public. It is explained by the management that payment will be made upon the total amount of both series; that is to say, not only upon the non-assenting bonds, but on those which have been exchanged for the refunding 4s, and which are now deposited as collateral security for the latter. An interesting feature of the matter is connected with the current statements that the step was taken by the Wabash management to forestall legal action by certain of the non-assenting holders of the debenture Bs who it was understood were likely to apply to the courts for an injunction to prevent the payment of interest on the refunding mortgage bonds, on the ground that before this was done the company would have to make a payment on the income debentures. The move, therefore, may be regarded as more or less of a precautionary measure, and, in fact, has been regarded in some quarters as being in its way a rather shrewd stroke, since it seems to effectually prevent such action by the dissenting holders of the income Bs bonds, as is referred to above.

An interesting and unusual situation exists at present in the copper market. According to all precedents, there should at this time be a considerable buying demand. Consumers, however, supplied themselves very liberally with the metal last spring, the deliveries on contracts effected at that time running up to as late as June. Instead of coming into the market again, however, to supply their requirements, the larger consumers seem to have refrained from doing so with a singular degree of unanimity, and there seems to be an impression that they have stocks of copper on hand sufficiently large to fill their requirements until the end of the present month or a little later. On the other hand, the large producers and selling concerns show a decided unwillingness to make any reduction in the price, the figures quoted by such concerns being a fraction below 25½ cents per pound for lake copper and 25¼ cents for electrolytic. There have, it is understood, been some sales of comparatively small lots below the figures adhered to by the large concerns, but such transactions, it is stated, represent nothing more than the necessities of some of the smaller mining concerns which found themselves obliged to raise money in that way. The copper position, in short, remains at a virtual deadlock, neither producers nor consumers showing any disposition for the time being to change their views. It would seem, however, that the accumulation of the metal, which is bound to occur under such circumstances, would in the end lead to some concession as to prices, although even among the manufacturers themselves there is no claim that the quotations for the metal are likely to exhibit any very severe recession. In fact, anything of that kind would to all appearances be considered undesirable from a trade standpoint.

The regular monthly report of the Department of Agriculture on the condition of the cotton crop was the cause of considerable excitement and of a heavy advance in prices, because it showed only a trifling improvement in condition during the month of June, whereas a much heavier percentage of gain was looked for. The report places the condition on June 25 at 72, as compared with 70.5 on May 25, 83.3 on June 25, 1906, 77 at the corresponding date in 1905, and a ten-year average of 83.2. The following table shows the condition on June 25 of this year and of the preceding year, with the respective ten-year averages, also the condition on May 25, 1907:

States	June 25, 1907	May 25, 1907	June 25, 1906	10-yr. av'ge
Virginia	65	80	88	86
North Carolina	72	80	80	85
South Carolina	79	77	77	82
Georgia	78	74	82	82
Florida	83	80	77	84
Alabama	68	65	84	83
Mississippi	67	65	88	82
Louisiana	66	64	87	84
Texas	72	70	82	83
Arkansas	67	65	86	84
Tennessee	69	63	84	86
Missouri	64	65	91	87
Oklahoma	74	80	90	85
Indian Territory	73	78	84	87
United States	72	70.5	83.3	83.2

The following table shows the condition of the cotton crop from June to October in recent years:

Year	June	July	Aug.	Sept.	Oct.
1907	70.5	72.0	....	....	....
1906	84.6	83.3	82.9	77.3	71.6
1905	77.2	77.0	74.9	72.1	71.2
1904	83.0	88.0	91.6	84.1	75.8
1903	74.1	77.1	79.7	81.2	65.1
1902	95.1	84.7	81.9	64.0	58.3
1901	81.5	81.1	77.2	71.4	61.4
1900	82.5	75.8	76.0	68.2	67.0
1899	85.7	87.8	84.0	68.5	62.4
1898	89.0	91.2	91.2	79.8	75.4
1897	83.5	86.0	86.9	78.3	70.0
1896	97.2	92.5	80.1	64.2	60.7
1895	81.0	82.3	77.9	70.8	65.1
1894	88.3	89.6	91.8	85.9	82.7
1893	85.6	82.7	80.4	73.4	70.7
1892	85.0	86.9	82.3	76.8	73.3
1891	85.7	88.6	88.9	82.7	75.7
1890	88.8	91.4	89.5	85.5	80.0
1889	86.4	87.6	89.3	86.6	81.1
1888	88.2	86.7	87.3	83.8	78.9
1887	96.9	97.0	93.3	82.8	76.5
1886	88.7	86.1	81.3	82.1	79.3
1885	92.0	96.0	96.5	87.0	78.0
1884	87.0	86.0	87.0	82.5	74.7
1883	86.0	90.0	84.0	74.0	68.0

The area planted this year and the condition on June 25 compare with the area, yield and condition in six preceding years as follows:

	Area	Yield	Condition June 25
1907	32,060,000	....	72.0
1906	32,049,000	13,290,000	83.3
1905	27,562,000	10,500,000	77.0
1904	31,730,000	13,565,000	88.0
1903	28,907,000	10,011,000	77.1
1902	27,878,000	10,727,000	84.7
1901	27,534,000	10,680,000	81.1

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Bill of Lading—Purchase—Title.

The Supreme Court of Tennessee held, in the case of Lewis vs. Small et al., that the purchase of a draft attached to a bill of lading did not transfer title to the goods so as to render the purchaser of the draft responsible upon the contract in accordance with which the property was shipped.

Contract—Offer—Acceptance—Telegram.

The Supreme Court of Iowa held, in the case of Lucas vs. Western Union Telegraph Company, that the acceptance by telegram of an offer by mail which does not specify any mode of acceptance does not complete the contract until the telegram is delivered to the sendee.

Sale—Delivery—"F. O. B. Cars."

Where a seller of merchandise agreed to sell twenty carloads thereof delivered to the buyer "f. o. b. cars" at the seller's place of business, the Supreme Court of Kansas held, in the case of Hurst vs. Altamont Manufacturing Company, that it was not the duty of the buyer to furnish the cars to receive the goods, since the phrase "f. o. b. cars," where the use of a common carrier is necessary, means that the seller will secure the cars, load them, and do whatever may be required to accomplish the shipment and consignment of the goods to the buyer, free of expense to him.

Carrier—Consignment—Damage—Freight.

The Supreme Court of Kansas held, in the case of Missouri Pacific Railroad Company vs. Peru-Van Zandt Implement Company, that where a common carrier becomes liable to the consignee of goods for damages to the property received in transit, and the amount of such damages equals or exceeds the freight bill on the damaged goods, the lien of the carrier is thereby extinguished and the consignee is entitled to the possession of such goods without payment of freight, and that in such a case the refusal of the carrier to deliver the goods to the consignee on demand constitutes a conversion.

Railroad—Cattle Guards—Mandamus.

The Supreme Court of Louisiana held, in the case of State ex rel. Boagin vs. New Orleans Pacific Railroad Company, that where a railroad's right of way has been secured by expropriation, the duty of the railroad to install cattle guards and crossings results not from contract but from law, but that mandamus is not the proper remedy for enforcing the duty to install cattle guards and crossings where there is serious difference between the parties as to whether the cattle guards and crossings in question are necessary, mandamus issuing only when the duty sought to be enforced is clear and unequivocal.

Telegram—Non-Delivery—Liability.

The case of Western Union Telegraph Company vs. Caldwell, decided by the Kentucky Court of Appeals, arose out of an action by a sister against the telegraph company for damages for mental suffering, owing to the failure of the company to deliver a telegram announcing the death of her brother. Uncontradicted testimony in the case showed that she could and would have sent a return telegram deferring the funeral until she arrived. The court held that the contingency upon which the appellee might have enjoyed this comfort was not remote or speculative, and that the telegram on its face furnished information of its serious import and was notice to the company that its prompt delivery was important. The court, in sustaining a verdict for $1,000, held that telegraph companies owe a duty to the public, and that a failure to deliver a telegram within a reasonable time is more than a breach of contract, being an omission to perform a duty resting on the company as a public servant.

Stockholders' Liability—Interstate Law.

In the case of Bernheimer et al. vs. Converse, Receiver, recently decided by the Supreme Court of the United States, it appeared that the constitution of Minnesota provided that "each stockholder in any corporation * * * shall be liable to the amount of stock held or owned by him." A statute was passed to provide for the enforcement of this liability, and the courts of Minnesota held that an action for its enforcement could be maintained only by creditors bringing in all stockholders to make good any deficiency in corporate assets for the payment of corporate debts, and that a receiver could not maintain such an action. In an action brought by a Minnesota receiver in a United States Circuit Court in New York against stockholders in a Minnesota corporation to recover the amount of an assessment imposed by a Minnesota court on the liability in question under a statute of Minnesota enacted after the defendants acquired their stock, the Supreme Court of the United States held that the liability in question was contractual in its nature and capable of being enforced in the courts of another jurisdiction. The court said that the stockholders' contract was not impaired by subsequent legislation providing additional remedies for the enforcement of the liability and making stockholders liable in actions at law brought by a receiver in any jurisdiction upon an assessment made by a Minnesota court upon his application, and providing that such assessment should be binding upon all stockholders, including those not made parties to the proceeding, and that the expenses of the receivership should be included in the assessment.

Sale—Lumber—Rejection—Charges.

In the case of The Virginia-Carolina Lumber Company vs. Eisinger et al., decided recently by the Court of Appeals of the District of Columbia, it appeared that the appellees gave the appellant a trial order for lumber at a price named, the latter to pay freight charges, and the appellees reserving the right to reject it if unsatisfactory. The first carload proving unsatisfactory, the appellees rejected it and notified the appellant that it was held subject to its order upon the payment of freight charges. The appellant acquiesced in such rejection, and correspondence looking to a resale of the lumber was had without result. The appellant thereupon sued to recover the contract price of the lumber. The court held that upon the rejection of the lumber by the appellees the contract was at an end; that the lumber remained the property of the appellant, subject to the repayment of the freight charges paid by the appellees, and that the trial court properly directed a verdict for the appellees for the amount of such freight charges.

Accident—Negligence—Agency.

In the case of The Standard Oil Company vs. Parkinson, recently decided by the United States Circuit Court of Appeals for the Eighth Circuit, it appeared that one Perry was intrusted with the keys of the storage tanks of the Standard Oil Company at a town in Nebraska, drew oil and gasoline from them, hauled and delivered these articles to customers of the company in neighboring towns, sold them when he could at prices fixed by the company, collected the prices of the articles delivered and sold, and remitted their proceeds weekly to the company, which paid him monthly 1 cent on each gallon of the article delivered and sold. He used a wagon of the company and his own horses and selected his own routes and times to haul the oil and gasoline. As he was driving across a railroad track an engine collided with the wagon and a serious injury resulted. The court held that there was substantial evidence that Perry was the agent at the instant and in the act of driving upon the railroad crossing, so that the question whether he was an agent or an independent contractor was for the jury.

Employers' Liability—Railroad—Lessor.

The Supreme Court of Louisiana held, in the case of Travis vs. Kansas City, Shreveport & Gulf Railway Company, that in the absence of charter or statutory permission to lease its road, a railroad company is held liable for the breach on the part of its lessee of any of those duties imposed upon the lessor company by its charter or by law in favor of the public; that is to say, of carrying freight and passengers safely and of operating with due care to the safety of the public generally; that in considering the liability of the lessor company a distinction is made by the courts between an employee and the public generally, and that the employee cannot recover for the breach of a duty arising under the contract of employment, as, for instance, the duty of providing a safe place to work in. The court said that the duty of the employer to furnish the employee a safe place to work in is nothing more than one of the implied obligations of the contract, and is not a duty arising from the general relation which the railroad occupies toward the public or toward the employee as one of the public; that the duty to light the yard of the railroad company is not a duty owing to the public by the lessor company, but merely one arising out of the contract of employment, and that the question of what light shall be furnished to the employee to work by on the premises of the employer is one strictly between the employee as such and the employer as such.

BUSINESS NOTES.

Iron and Steel.

According to the Census Bureau, since 1900 the number of establishments in the iron and steel industry has decreased from 669 to 606. At the same time capital increased from $590,530,484 to $948,689,640; the average number of wage earners, from 222,607 to 242,740; wages, from $120,836,338 to $141,439,906; the cost of materials used, from $522,431,701 to $620,171,881, and the value of products, from $804,034,918 to $905,854,152. The tonnage produced in 1905 was 34,844,933, an increase of 18.1 per cent. since 1900. Each of the geographic divisions shows a gain, whether measured by investment of capital, by wage earners employed, or by tonnage or value of products. The New England states reported 281,809 tons of products and $18,965,450 value; the middle states, 19,189 532 tons of products and $526,355,772 value; the southern states, 3,925,784 tons of products and $71,028,747 value, and the western states, 11,447,808 tons of products and $289,504,183 value. At each census since 1880 the middle states or division has ranked first, the western second, the southern third and the New England fourth, with respect to products, whether measured by value or quantity, in the industry as a whole and in each of the branches. In the case of each group of states the rate of increase is greatest in the steel works and rolling-mill branch of the industry. Pennsylvania, Ohio and Illinois, with value of products of $471,228,844, $152,859,124 and $87,352,761 respectively, were the leading states in 1905, as well as in 1900 and 1890.

Trading on New York Stock Exchange.

Transactions in stocks on the New York Stock Exchange in June aggregated 9,734,359 shares, the smallest total in any month since June, 1904, when the total was 4,985,720 shares. Last month's total showed a decrease of 6,021,004 shares as compared with the previous month, and of 10,547,948 shares as compared with the corresponding month last year. Sales on the 24th fell to 139,739 shares, the smallest total since June 15, 1905, the trading on that day amounting to only 137,058 shares. On Saturday, the 22d, in the two hours of business, but 54,627 shares changed hands, the smallest dealings in any like period since June 4, 1904, on which date the sales were 52,358 shares. The month just ended was the first month in two years that the sales failed to reach a million shares on at least one of its days. The largest total was that of the 3d, when 709,185 shares were traded in. At the same time the total dealings in bonds was the smallest of any month since September, 1900, while the six months' trading was the lightest recorded for any similar period since 1897. Trading by months is set out in the following:

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	53,958,500
April	19,220,048	43,254,400
May	15,755,363	33,959,500
June	9,734,359	21,666,500
Total	116,458,561	238,046,400

Comparisons on stock trading back to 1900 follow:

Stocks (shares)	*June*	*Six months*
1907	9,374,359	116,458,561
1906	20,282,307	148,089,420
1905	12,536,567	137,640,882
1904	4,685,720	50,635,546
1903	15,535,404	82,207,426
1902	7,813,049	87,547,320
1901	19,819,131	175,798,433
1900	7,292,357	65,946,211

Bond dealings back to 1897 follow:

Bonds	*June*	*Six months*
1907	$21,766,500	$238,046,400
1906	53,940,000	396,502,800
1905	80,851,000	581,810,200
1904	48,742,500	306,192,000
1903	57,944,500	341,855,850
1902	64,152,800	487,322,400
1901	79,858,050	636,991,720
1900	29,801,050	290,281,360
1899	57,870,860	551,883,270
1898	70,608,960	396,214,720
1897	46,081,700	211,442,860

Tin and Terne Plate.

Of the thirty-six active tin and terne dipping establishments in 1905, three-fourths were equipped for the manufacture of black plates. The leading items regarding the active establishments which buy black plates and coat them, and the active dipping departments of plants which both manufacture and dip black plates, are as follows: Capital, $10,891,239; average number of wage earners, 4,847; wages, $2,383,070; cost of materials used, $31,375,714, and value of products, $35,283,360. A concentration of the industry is noticeable. Coincident with a decrease of 36.8 per cent. in number of establishments there has been an increase of 60.4 per cent. in capital and 10.6 per cent. in value of products. Pennsylvania advanced considerably, manufacturing 54.8 per cent. of the total value of products, as compared with 39.3 per cent. in 1900. About one-half of all the wage earners in the industry in the United States were employed in the tin and terne plate mills of Pennsylvania. The cost of 1,019 608,657 pounds of black plates consumed, both domestic and foreign, in 1905, formed 73.3 per cent. of the cost of all materials. The principal product of the tin and terne dipping industry was 1,032,940,706 pounds of tin and terne plates or sheets of all kinds, valued at $34,767,019, an advance over 1900 of 21.5 per cent. in quantity and 10.8 per cent. in value. In 1905 tinplates constituted 84 per cent. of the total tin and terne plate output; terneplates, 15 4 per cent., and other sheet iron and sheet steel, tin or terne plated, six-tenths of 1 per cent. There has been a heavy increase in tinplate production in Pennsylvania during the period, amounting to 104.3 per cent. The state produced 36 3 per cent. of the total tinplate product of the country in 1900 and 60.5 per cent. in 1905.

Railway Earnings.

Dow, Jones & Co. estimate that "the railroads of the United States have earned $2,578,413,273 gross in the fiscal year just ended, an increase of $258,653,243, or 11.15 per cent., over the previous year, comparing with an increase of $237,277,624, or 11.4 per cent., in 1906 over 1905; that the net earnings of the railroads this fiscal year will amount to $841,468,503, an increase of $53,871,626, or 6.84 per cent., over the net earnings of the previous fiscal year, comparing with an increase of $96,329,141, or 13.9 per cent., in 1906 over 1905; that the wages paid to railroad employees in the fiscal year now closing will exceed $1,025,000,000, an increase of more than $100,000,000 in the year.

GROSS EARNINGS.	
1907 (estimated)	$2,578,413,273
1905 (Interstate Commerce Commission reports)	2,319,760,030
Increase 1907 over 1906	258,653,243
Per cent. increase 1907 over 1906	11.15
Increase 1906 over 1905	237,277,624
Per cent. increase 1906 over 1905	11.4
NET EARNINGS.	
1907 (estimated)	841,468,503
1906 (Interstate Commerce Commission reports)	787,596,877
Increase 1907 over 1906	53,871,626
Per cent. increase 1907 over 1906	6.84
Increase 1906 over 1905	96,329,131
Per cent. increase 1906 over 1905	13.9

	*1907	1906
Gross increase	$258,633,243	$237,277,624

* Estimated.

Progress of the Canadian Northwest.

A special census of Manitoba taken in 1870 showed it to have in that year a population of 12,228, exclusive of Indians. In 1881 Manitoba and the territories had a population of 105,681, inclusive of 22,783 Indians. The census of that year showed a wheat acreage of 56,971 and production of 1,153,328 bushels, 302,049 bushels of barley and 1,330,220 bushels oats. In 1891 the total population was 219,305; the area in wheat was 1,010,430, of barley 64,972 acres and of oats 317,848 acres, and the production of wheat was 17,884,629 bushels, of barley 1,667,893 bushels, and of oats 9,998,556 bushels, being for the harvest of 1890. These figures are for areas of territory practically the same as the areas of Manitoba, Saskatchewan and Alberta. Beginning the twentieth century, the territory of the three provinces as now constituted had a population of 419,512, and on June 24, 1906, it had 808,863, an increase in five years of 389,351, as compared with 200,207 in the ten years 1891-1901 and of 113,624 in the ten years 1881-91. The production of cereals for 1906 is computed as follows:

	Acres 1905	*Bushels* 1905	*Acres* 1906	*Bushels* 1906
Manitoba—				
Wheat	2,422,345	47,526,586	2,722,386	54,637,120
Barley	253,942	7,544,150	343,412	12,254,030
Oats	770,279	31,458,692	931,373	44,742,301
Saskatchewan—				
Wheat	1,381,921	31,799,198	2,117,486	50,329,432
Barley	40,732	1,196,419	77,576	2,828,447
Oats	606,346	25,623,849	901,646	41,885,285
Alberta—				
Wheat	147,921	3,035,843	223,930	5,871,397
Barley	80,900	2,231,878	108,175	3,878,683
Oats	311,804	11,728,314	489,627	24,032,423

The whole area in wheat, barley and oats increased from 3,491,413 acres in 1900 to 6,025,190 acres in 1905, and to 7,915,611 acres in 1906; and the yield of the three crops increased from 43,252,664 bushels in 1900 to 152,244,929 bushels in 1905, and to 240,459,068 bushels in 1906. The number of farms increased from 31,815 in 1891 to 54,625 in 1901, and to 120,439 in 1906.

CURRENT BUSINESS NEWS.

Commercial.

Consul F. D. Hale, of Coaticook, furnishes the following pertaining to Canada: Canada's trade policy has built up a complete industrial system, the invested capital of which is to-day about $486,000,000, as against $146,000,000 in 1881; 15,000 manufacturing establishments with 500,000 employees are turning out products valued at nearly $486,000,000. The textile industry is represented by twenty-six cotton mills with 600,000 spindles, and 300 woolen mills; seventy-five mills are producing wood pulp and paper with excellent prospects of further expansion. Boots and shoes are being largely produced in Quebec and fast rivaling in quality and style the American product; German beet sugar is being displaced by British West Indian cane sugar, imported under the preferential tariff, and the beet-sugar industry is being successfully established in the west. Five years ago the population of the prairie provinces was 466,000, and the grain crop amounted to 43,000,000 bushels. In 1906 the population was 1,000,000 and the grain crop was 200,000,000 bushels, one-half of this being wheat and grown on less than 4 per cent. of the net area of land available for cultivation in that section. Between 1897 and 1906 nearly 900,000 immigrants have come to this country. The consumption of manufactured goods is about $110 per capita; of this home production supplied all except $25 per capita.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—The outlook for the crops has improved, owing to better weather conditions. France—Complaints are heard regarding the irregularity and lateness of the crops as a result of unfavorable weather; warmth is badly needed. Germany—Crops are progressing moderately, and the condition is about unchanged from last week. Hungary—Numerous complaints are heard regarding rust, and the outlook, on the whole, is not good. Roumania—The wheat crop is estimated by some as only half a crop, while others say that a fair promise is indicated. Bulgaria—The outlook for the spring crops is favorable; wheat, on the whole, is greatly improved. Russia—In the southwest spring crops are suffering from heat and drought, and winter grain is in very poor condition; elsewhere both winter and spring are mostly fair. Supplies are very small. Italy and north Africa—The outlook is satisfactory.

Beginning with July 1, 1907, the following rates of duty per 100 kilos in weight of the articles mentioned were put in force, applying on American grain and products, according to the commercial agreement between the United States and Germany:

	Marks
Rye	5.00
Wheat and spelt	5.50
Malting barley	4.00
Other barley	1.30
Oats	5.00
Maize (Indian corn)	3.00
Rice, not cleaned (unpolished)	4.00

Census returns show that the increase in the average value of all lumber was from $11.14 per 1,000 feet in 1900 to $12.76 at the census of 1905, or 14.5 per cent. The advance extended to all species of both conifers and hard woods, and in the case of several of them was large. Among the conifers yellow pine advanced from $8.59 per 1,000 feet to $10.10; white pine, from $12.72 to $14.92; hemlock, from $9.97 to $11.91; Douglas fir, from $8.67 to $9 51; spruce, from $11.29 to $14.03, and cypress, from $13.34 to $17.50. Oak increased from $14.02 per 1,000 feet to $17.51; poplar, from $14.22 to $18.90; maple, from $11.83 to $14.94; cottonwood, from $10.35 to $14.92; elm, from $11.57 to $14.45, and gum, from $9 75 to $10.87.

The table which follows shows the total value of merchandise imported into China, stated in haikwan taels, in 1896 and 1906, from the United States, United Kingdom, Japan and Hong-Kong, and the aggregate for all other countries, and the total imports of the two years named, also the percentage of gain in each case:

From	*Haikwan taels,* 1896	*Haikwan taels,* 1906	*Per ct. of gain*
United States	11,029,853	44,436,209	272.5
United Kingdom	44,571,387	78,738,292	76.7
Japan	17,390,123	61,052,356	251.0
Hong-Kong	91,356,530	144,936,957	58.6
All other countries	46,375,526	99,126,473	113.7
Total	211,623,419	428,290,287	102.4

Value of iron and steel, not including ore, imported in May was $4,520,103, against $2,859,492 in May, 1906; for eleven months the total was $37,315,606, against $26,156,365. Exports, excluding ore, for May amounted to $14,593,643, against $15,685,722 for May, 1906; for eleven months, $164,304,212, against $146,699,882.

The weekly summary of weather conditions issued by the Weather Bureau Tuesday says: "While much cooler than usual in the middle Rocky mountain region and central valleys during the week ended July 1, the temperature in the last named districts was favorable; in the Rocky mountain region cool nights during the fore part of the week were detrimental, light frosts occurring in portions of Idaho, New Mexico and Arizona. The lake region and Atlantic coast and gulf districts experienced nearly normal and generally favorable temperature. A large part of Texas and portions of Louisiana and South Dakota need rain, but elsewhere in the principal agricultural districts there is sufficient moisture. Severe local storms occurred in portions of Oklahoma, Kansas, Nebraska and Missouri, and also in the south Atlantic states and New England; elsewhere the week was comparatively free from storms of this character. In the Carolinas, Georgia and Florida there was less than the usual sunshine, and cloudy to partly cloudy weather prevailed during a part of the week in the lake region and upper Mississippi valley; elsewhere east of the Rocky mountains the duration of sunshine was normal or above."

The N. K. Fairbank Company estimate stocks of lard held in the United States, Europe and afloat therefor as follows: July 1, 1907, 339,232 tierces; June 1, 1907, 290,662; July 1, 1906, 313,315; July 1, 1905, 419,696; July 1, 1904, 308,345; July 1, 1903, 207,444.

Broomhall places the total deficiency in the world's wheat crop at 288,000,000 bushels as compared with last year, including a shortage in the United States of 104,000,000 bushels.

The government crop report for July 10 will be the principal report for the year. It will give the condition of all the crops excepting the late fall crops and include wheat, corn, oats, barley, rye, flax, potatoes and all the minor crops. It will also give the acreage of corn, acreage of flax and potatoes and the amount of old wheat remaining in farmers' hands. The July report is the last report of condition of the season on winter wheat. The August report will give the preliminary estimate of the yield per acre on winter wheat.

Snow makes the winter wheat 350,000,000 bushels, the southwest having 89,000,000 bushels, against 163,000,000 bushels last year. Spring wheat is 87, against 86.5 last month, suggesting 255,000,000 bushels—a total of all wheat of 605,000,000 bushels, against 776,000,000 bushels last year. The corn acreage is 97,911,000 acres, as against 95,372,000 acres last year. The condition is 85.2, as against a five-year average of 87. The oats condition is 76, as against 81 last month and 76 last year. The crop is 850,000,000 bushels, or 80,000,000 bushels short of last year.

The output of tobacco manufactures in May is thus reported by the *Western Tobacco Journal:*

	May, 1907	*April,* 1907	*May,* 1906
Tobacco, pounds	32,898,808	30,733,321	30,251,643
Cigars, number	624,186,837	618,354,243	622,784,873
Small cigars	112,343,000	106,243,888	89,219,000
Small cigarettes—			
At $1.08	398,539,055	330,995,444	297,986,324
At 54 cents	71,828,574	81,135,129	52,745,000
Total	470,367,629	412,130,573	350,731,324
Large cigarettes	1,490,070	1,443,150	793,220
Total	471,857,699	413,573,723	351,524,544
Snuff, pounds	1,960,444	1,964,168	1,938,464

The State Board of Agriculture in Ohio places the condition of wheat there at 79 per cent., against 77 on May 1 and 95 a year ago, when the crop was 43,000,000 bushels.

The Illinois report makes the winter-wheat condition 91, against 89 May 1, and the spring wheat 102 per cent. Corn condition is placed at 75 June 20, or 13 per cent. lower than last year. Acreage is placed at 7,285,485, a reduction of 6 per cent.

Financial.

American capital to the extent of $195,000,000 has been invested in Canada during the past few years, induced thereto by the Canadian British preference policy.

The Knickerbocker Trust Company, of New York, of which Charles T. Barney is president, has issued a booklet showing the growth of trust companies and their function in the world of banking. This booklet is attractive in appearance, the topography is good and the subject matter of the work is printed on super-calendered paper, the whole being enclosed in a border of neat design. Among other things it is shown that the deposits of the trust companies of New York state have quintupled during the last decade, and now exceed $1,000,000,000.

In June charters were issued to fifty-five national banks having authorized capital of $4,836,000, of which thirty-four, with capital of $886,000, were with individual capital of less than $50,000, and twenty-one, with capital of $3,950,000, banks with individual capital of $50,000 or more. During the fiscal year 490 national banks with authorized capital of $34,015,000 were chartered, but owing to liquidations, etc., the net gain is 414 banks. Number of national banks in existence, authorized capital stock, bonds on deposit to secure circulation, circulation secured by bonds and by lawful money on March 14, 1900, October 31, 1906, and June 30, 1907:

	Mar. 14, 1900	*Oct.* 31, '06	*June* 30, '07
Number of banks	3,617	6,225	6,521
Authorized capital	$616,308,095	$845,939,775	$898,156,275
Bonds on deposit	244,611,570	539,653,180	558,442,910
Circulation, on bonds	216,374,795	536,933,169	555,217,881
Circulation, lawful money	38,027,935	46,238,816	48,217,809
Total circulation	254,402,730	583,171,985	603,788,690

The Transvaal gold output in June, as estimated by London Kaffir houses, was 500,000 ounces fine, a reduction of 25,000 ounces from May. Value of the June output, roughly, is $10,625,000, compared with $11,139,190 in May. Not since last July has as small an outturn as 500,000 ounces been reported for the Transvaal. December's total, 550,167 ounces, is the high record. Comparison of the value of last month's output with previous months, and with June in other years, is as follows:

June, 1907	$10,625,000	June, 1906	$10,109,065
May, 1907	11,139,190	June, 1905	8,757,060
April, 1907	11,405,500	June, 1904	6,546,155
March, 1907	11,436,950	June, 1903	5,061,610
February, 1907	10,482,170	June, 1902	3,032,465
January, 1907	11,418,705	June, 1901	420,070
December, 1906	11,684,850	June, 1900	None
November, 1906	11,328,125	June, 1899	8,328,575

At the close of the fiscal year there was a big surplus in the United States Treasury—$86,945,542. The cash balance was $264,734,753, or $89,000,000 larger than last year. Customs receipts broke all records. Trust funds, $1,106,009,869.

A Berlin dispatch says that the failure of the Marienburg Bank, like that of Banker Kilz, on Saturday last, is ascribed to the prevailing speculation mania. Thousands of small investors lost their all, and many tradesmen are ruined.

The coinage at the United States mints during the month of June was very large, reaching a total of 26,649,672 pieces, valued at $4,077,598. Of this aggregate the largest item was 286,579 gold coins, which were valued at $3,344,252. The silver coinage consisted of 2,038,300 pieces and was valued at $490,085. The minor coinage included 24,324,793 nickels and cents and was valued at $243,260. The coinage for foreign governments was also large. For the Philippines government 3,996,000 silver peso and centavo pieces were coined, and for the Mexican government 2,400,000 50-centavo pieces were minted. For the Republic of Panama 1,800,000 balboa pieces were struck off.

Reports show that Nebraska's banks are in a flourishing condition. During the past year their number has increased by thirty-five. Abstracts of the condition of the incorporated, private and savings banks show the following: Resources, $79,485,947; loans and discounts, $52,943,388; general deposits, $65,302,409; legal reserve required, 15 per cent.; actual reserve, 34 per cent.; increase in capital since May, 1906, $769,000; in deposits, $11,938,131; in loans, $8,547,816.

The directors of the Wabash Railroad decided at a meeting held June 28 to pay the entire 6 per cent. interest on the debenture bonds series "A", and to pay 1 per cent. on the debenture bonds series "B." Both classes are regularly 6 per cent. bonds, but no interest has been paid on the "A" series since 1904, and no interest has ever been paid on the "B" series. Both series were brought out in 1889, the "A" series being an issue of $3,500,000 and the "B" issue $26,500,000.

The foreign trade of the port of New York in the year ended June 30 was the largest in its history. The increase in total appraised value of the year 1907 over 1906 is approximately $115,000,000. The imports of precious stones aggregate $41,112,371, as against $40,217,543 for the preceding year. The importations of automobiles show an increase, there being an aggregate of 1,435 cars, with a total appraised value of $5,009,005, for 1907, compared with 1,326 cars, with a valuation of $4,724,279, for 1906. The total value of appraised merchandise for 1907 is $850,050,780.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

The Illinois Trust & Savings Bank, the only bidder for $1,200,000 Chicago South Park 4 per cent. twenty-year serial bonds, got the entire amount Tuesday. The bank paid $100 premium over par for the full amount.

The *Journal of Commerce* figures that $508,119,500 in stocks and $770,609,000 in notes or bonds were issued during the half year ending June 29, 1907. In the same period of 1906 stock issues amounted to $296,434,214 and of bonds to $700,228,000. The increase in 1907, stock and bonds, aggregated $282,066,286.

Industrial.

According to the *American Federationist* 1,013 unions, with a membership of 74,300, reported 1.7 per cent. without employment in May. In the preceding month 739 unions, with a membership of 59,824, had five-tenths of 1 per cent. unemployed. In May the ratio was seven-tenths of 1 per cent.

At Winnipeg, a new $100,000 brass-making plant started casting in April with a capacity of 400,000 pounds per month. It is the first plant of its kind in the Canadian northwest, and so rapidly are orders coming in that the works will soon need to be enlarged. It is estimated that the company effects a saving of between 30 and 35 per cent. on the cost of the American-made goods landed there with freight and tariff charges paid. Much of the raw material used in the manufacture of brass comes from the United States duty free. This is specifically so of ingot copper, scrap brass, coke and molding sand. Lead comes from the Canadian mines at Trail, and the block tin and zinc used are imported direct from England.

Black plates or sheets for tinning are a product of the rolling mill, and the statistics for the thirty-five establishments which make these solely or in connection with other rolling-mill products are included in those for steel works and rolling mills in the report on the iron and steel industry. The products of the black-plate industry were valued at $30,395,757, 83.2 per cent. of which represents the value of 504,025 tons of black plates. The quantity of all other plates and sheets made was 77,867 tons, and the value $3,941,563. All other products had a value of $1,157,115. Pennsylvania is much the most important state, reporting 47.5 per cent. of the total capital, 50 per cent. of the total number of salaried officials, clerks and wage earners, and 51.6 per cent. of the total value of products.

The American Smelting & Refining Company has voluntarily raised the wages of all employees at El Paso, Tex., from 8 to 15 per cent.

During the fiscal year 1,463 vessels of 510,865 gross tons were built in the United States. This is the greatest number of vessels built in any one year in the last half century, and the tonnage was only exceeded twice. Steel steam vessels numbered 122, of 360,665 tons, and of these forty-seven, of 238,713 tons, were built on the Great Lakes. Fifteen of these lake steamers are over 7,000 tons each. For the coasting trade, twenty-four steel steamers, each over 1,000 tons and aggregating 98,028 tons, were built. Only two steamers were built for foreign trade.

Miscellaneous.

On June 27 the governor of Massachusetts signed a new inheritance-tax law, the provisions of which as to exemptions, graduations and rates are substantially as follows: Collateral inheritances, above $1,000, excepting charitable, religious and educational institutions, 5 per cent. Direct inheritances, class A (father, mother, husband, wife, and lineal descendants, natural or adopted, including husband of daughter or wife of son): Ten thousand dollars or less, exempt; not exceeding $25,000, 1 per cent.; between $25,000 and $50,000, 2 per cent.; between $50,000 and $100,000, 3 per cent.; between $100,000 and $250,000, 4 per cent.; above $250,000, 5 per cent. Inheritances, class B (brother, sister, nephew or niece of decedent): One thousand dollars or less, exempt; not exceeding $25,000, 3 per cent.; between $25,000 and $100,000, 4 per cent.; above $100,000, 5 per cent.

Quotations for Government, State, Railroad and Miscellaneous Bonds, Week ending July 3.

Thurs., July 4: STOCK EXCHANGE CLOSED.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Continued favorable weather conditions have made for further crop development, expansion in retail trade in light summer goods, and notable stimulation of hitherto lagging reorder business. The poor start that the crops have had and the failure of retail stocks to move promptly, however, make for great irregularity in the reports from different districts, though, taking the situation as a whole, there has been a vast improvement as compared with a month ago. One of the most favorable developments of the week has been the improvement noted in collections at many markets, a sure sign that retail stocks are moving, though the number of cities reporting reduction sales or slow trade is sufficiently large to show that trade in summer wear has not in all cases been satisfactory. The usual measures of business, such as clearings and failures, point to irregular conditions. Thus the clearings of the entire country have fallen behind 1906, due entirely to New York's loss, which is assigned to speculative dullness, as outside of the metropolis clearings gained over the first half of 1906. In failures it is to be noted that the number is down to the lowest minimum of the past twenty-five years, but the liabilities are the largest, with one exception, for ten years past. Increased percentages of assets to liabilities this year point apparently to money market strain on otherwise solvent concerns. The crop reports are irregular but late as a whole, and perfect weather is needed for good results. The government report on cotton condition was disappointingly low—the poorest ever recorded at this season, in fact. Corn is very backward—two weeks late and half the usual height. Wheat yields in the southwest are light, but quality is good. Desire to await a clearer view of crop outturn limits future commitments, but the situation in cottons is very strong on uncertain crop outlook and a heavily sold ahead condition at the mills. The future outlook as to prices of goods is now having the attention of manufacturers and wholesalers. Other features of interest this week are the increased activity at higher prices reported in all wool markets, the quieting down of building activity at many cities, the seasonable quiet as to new demand in iron and steel, hardware and shoe manufacturing, and the easing of western coal prices. In the staples markets the features are the hardening of quotations of cereals and the sharp advance in cotton, both due to crop reports. Stock speculation is rather more active and a bullish tone rules, despite higher money rates and more gold exports. Money is more active, and rates have worked higher for time as well as call loans. Western reports are that banks at some large centers are well loaned up, but that interior banks are buying commercial paper.

Favorable weather has made for good crop progress, but condition reports are very irregular. Winter-wheat harvesting will be general next week. It has begun in the southwest, but has been delayed by rains. Reports as to quality are good, but yields where ascertained are rather light. Oklahoma will not average over ten bushels per acre. Southern Kansas promises three to ten bushels, and that section predicts one-third of a crop. Eastern Kansas reports are better than this, but it is too early to predict. In Nebraska the quality is good, but not over 80 per cent. of last year's crop is predicted. Spring wheat has made good progress, but the plant is late and the acreage in the northwest is smaller, while that in other grains is larger. Some wheat has begun to joint, and oats, rye and barley are heading. The Red river district sends best reports, while in the James river valley the condition is claimed to be fair. Flax is growing rapidly. Corn is still backward. It should be knee or waist high on July 4, but is two to ten inches below last year. Poorest reports as to corn come from Iowa, last year's largest producer, and the plant there is eight inches short of normal. The crop as a whole is ten days to two weeks late, except in Oklahoma, where it is tasseling, but fields are weedy. In Kansas it is about half the normal height. Oats are indifferent. The green bug is reported damaging it in Indiana and Illinois. Weather conditions for cotton have continued favorable and the crop has made good progress, but is still very late. Best reports come from the lower Mississippi valley. Fields are clean, but labor is scarce. Louisiana sugar-crop prospects are the best in years, and rice promises well.

Holiday quiet rules in the shoe trade, but recent warm weather has helped retailers and jobbers, and the outlook for the coming half year is hopeful. Eastern shipments for the first six months of 1907 aggregate 2,465,340 cases, a decrease of 3.8 per cent. from the same period of 1906.

Considerably more activity is reported at leading wool markets, and all staple wools have sold well at Boston and at leading interior markets. All foreign fine merinos have been cleaned up and demand has been diverted to staple fleeces and territories. New wools have sold very well. South Americans have sold better, and in the country fleece wools have been very active. One-half the Montana clip has been already sold. Some California wools have brought higher prices than last year.

The surprise of the week was furnished by the government cotton report, published on Tuesday, showing a condition of only 72, as against 70.5 the month previous, a condition a year ago of 83.3, and a ten-year average of 83..2 A much larger gain was looked for in view of the reports of improvement in June, and the feeling is widespread that the government figures of the month before must have been pitched far too high if the later figures are to be regarded as correct. The market was strong on Saturday, gaining 10 points net all around, but was quiet and easy on Monday, awaiting the report on Tuesday, which caused an immediate jump amid great excitement of 60 to 70 points on futures, 40 to 50 points of which were held to the close on that day. On Wednesday the New York market opened strong on the heavy advance (25 points) reported from Liverpool, and July delivery sold at 13 cents, an advance of 109 points from Friday, but realizing was in immense volume, and final prices were 14 to 25 points lower than Tuesday's close, with July 70 points below the highest. The net change for the week to Friday night was a gain of 49 points on July, 27 on August and 46 on October, with spots up 35 points.

Cereal markets have been irregular, but with a gradual gain in strength on a growth of the feeling that crop prospects both at home and abroad are none too good. The early days of the week showed considerable liquidation, induced by the sharp advances of last week in wheat, Saturday's prices closing 2 cents lower than Friday, but better cables and poor reports as to yields in the southwest on Monday and Tuesday fully regained this earlier loss. Wednesday's reports were rather bearish on wheat, numerous crop reports pointing to gains in condition during June, which were outlined in BRADSTREET'S report of a week ago. There was, however, some uneasiness manifested regarding the crop in the northwest. Snow's report pointed to a crop of only 605,000,000 bushels, against his 776,000,000 estimate of last year. The price change for the past week was only a small fraction of a cent. Corn was generally strong on the reiterated reports of poor condition and backward growth, and though sympathizing with the drop in wheat early, closed on Wednesday 1 cent up. A large increase in BRADSTREET'S visible was not weakening to prices. Oats followed other grains within a narrower range, but showed final strength on poor crop reports. Provisions were quiet but strengthened late, with pork up 50 cents and lard 20 points higher. Cotton-seed oil was little changed.

Failures for six months, as reported to BRADSTREET'S, are the smallest with one exception—that of the first half of 1903—for twenty-five years, being only 4,792, a decline of 1.6 per cent. from 1906 and of 10.2 per cent. from 1904. Liabilities, however, aggregated $76,529,059, an increase of 30 per cent. on 1906 and of 22 per cent. on 1905, but 8 per cent. smaller than in 1904. With this latter exception liabilities are the largest since 1897, and it is to be noted that the percentage of assets to liabilities is 54.8, as against 49.1 in 1906 and 55.1 in 1904. These latter figures point apparently to increased strain upon otherwise solvent concerns. Large failures were more numerous than in any year since 1904, but, unlike that year, few banks are involved, and commercial, industrial and manufacturing concerns are more affected.

Bank clearings for June point to recession in stock speculation and some seasonable quieting in business in the smallest monthly total since September, 1905. New York City clearings for June are the smallest since September, 1904, apparently reflecting the lightest stock speculation in any month since June of that year. Clearings at all cities are 9.7 per cent. smaller than in May, and 8.9 per cent. less than in June, 1906. Outside of New York, clearings for June, though 4.6 per cent. smaller than for May, are 8.2 per cent. larger than in June, 1906. Six months' clearings are 3.3 per cent. smaller than in 1906, due to the 9.5 per cent. loss at New York, because outside of that city clearings are still 9.4 per cent. larger than a year ago.

Pig iron continues quiet and prices are easier at some markets. Premiums for spot iron have practically disappeared. A quiet steady market is looked for until about September 1, when a new buying movement is expected to set in. A sale of Bessemer pig for fourth-quarter delivery was made this week at $23, valley furnace, the lowest price quoted since April, when a heavy business was done on the basis of $21. New business in finished lines is not large, but specifications are heavy. Demand for deliveries on old orders is so urgent that the annual summer shutdown of mills will be short. A southwestern road has placed an order for 25,000 tons of open-hearth steel rails, the specifications being such that a special price was paid. Structural material is in moderate demand, specifications are heavy and some good business is in prospect. Trade in steel bars and steel pipe is good. Manufacturers of wire are unable to accumulate stocks in preparation for fall trade. Deliveries of sheets and plates are improving, and premiums on the latter are not so freely paid. Old material is dull and prices are lower. The market for coke is in better shape at Pittsburgh, but elsewhere business is quiet. Demand for anthracite coal for domestic uses is lighter, owing to warmer weather, but steam coal is in good request. Bituminous coal is easier in the west because of larger offerings from the east, where low-grade coal is weak. While buyers of copper are still holding off in the hope of obtaining lower prices, quotations are unchanged from last week, but some reports indicate that casting grades are weaker in price.

The New York stock market, with moderate dealings, displays a disposition to advance on bullish manipulation, the existence of a considerable though scattered short interest aiding such operations by large professional traders. The Harriman issues have been conspicuous objects of such activity. Higher rates for money have been disregarded as probably temporary, and an apparent improvement in the foreign financial position is looked on as satisfactory. Foreign exchange, however, is again firm at 4.87 for demand sterling, and there has been much talk of further gold exports, $1,000,000 gold having been actually engaged at New York for shipment to Amsterdam on last Tuesday.

Bank clearings for the week ending July 4 (a holiday period) aggregate $2,768,673,000, 15 per cent. above last week, but 3 per cent. under this week last year. Outside of New York exchanges amount to $1,072,364,000, a fraction of 1 per cent. over last week and 11 per cent. over the week last year.

Business failures for the week ending July 4 number 135, against 150 last week, 134 in the like week of 1906, 127 in 1905, 172 in 1904 and 154 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending July 4 aggregated 2,098,904 bushels, against 3,598,724 bushels last week, 1,745,343 bushels this week last year and 1,050,644 bushels in 1905. Corn exports for the week are 1,410,804 bushels, against 1,173,375 bushels last week, 691,600 bushels a year ago and 932,225 bushels in 1905.

IN CANADA.

Continued good weather and steady crop improvement are stimulating retail trade, reorder business and fall orders alike, and the feeling throughout Canada is much more optimistic than some time ago. The wheat crop, which was planted three weeks late, is now only ten days behind, and a heavy yield of good quality is possible. Colored cottons have been advanced 15 to 20 per cent.; many lines of canned goods are totally sold out, and building is active, with materials in demand. There will be no asparagus packed this year owing to the short crop. Montreal reports an excellent business in ready-made clothing; cheese exports are 100,000 boxes behind a year ago, and tea import regulations have been revised so that all goods will be tested by the customs authorities. Business is better in all lines at Toronto. Canadian railroads are turning to the United States for needed rails. The wool clip promises to be a good one. Winnipeg reports good wheat-crop prospects, but collections are a little slow and money is tight, partly because of land speculation. Trade is brisk on the Pacific coast and collections are good. Canadian failures for six months show a decrease of 12.3 per cent. in number, while liabilities are 21 per cent. less than in the same period of 1906. Canadian clearings for June and the half year are respectively 5.5 and 9.7 per cent. larger than in the like periods of 1906. Clearings for the week aggregate $82,358,360, a gain of 4.8 per cent. over last week and of 12.3 per cent. over this week a year ago. Failures for the week number 16, as against 29 last week and 11 in this week a year ago.

WEATHER FAVORS CROPS.

WHEAT HARVESTING GENERAL NEXT WEEK. ASCERTAINED YIELDS IN SOUTHWEST LIGHT, BUT QUALITY GOOD. SPRING WHEAT GROWING FAST BUT STILL LATE. RAINS HELP IN NORTHWEST. CORN TWO WEEKS LATE AND HALF THE USUAL HEIGHT. BUGS DAMAGE OATS. FLAX AND BARLEY IN GOOD SHAPE. LONG SEASON AND FAVORABLE WEATHER NEEDED ALL AROUND. COTTON FAVORED BY WEATHER AND MAKING GOOD PROGRESS, THOUGH STILL VERY LATE. FIELDS ARE CLEAN AND LITTLE COMPLAINT OF INSECTS. LOUISIANA SUGAR-CROP PROSPECTS BEST IN YEARS. RICE IN GOOD SHAPE.

CHICAGO.—Threshing returns on winter wheat are limited, the weather in the southwest having been too wet to permit extensive operations until the last two days. Yields are irregular—3½ to 12 bushels in Kansas, with a few running up to 15 and 25 bushels. In Oklahoma they

range from 3 to 20 bushels, and Missouri 5 to 20 bushels. There are no definite returns from Illinois and Indiana, but expectations are for yields of 10 to 20 bushels. Cutting will be general all over the winter-wheat belt next week. Spring wheat continues late, which is the main drawback. Part of the northwest had good rains where most needed and warmer weather the past few days, and some wheat is jointing. Crop conditions are spotted, being only fair in the James river valley and mostly good in the Red river district. Corn has made a fair advance but is two to three weeks late. The stand is irregular, ranging from 4 to 20 inches high, most of western Iowa being 6 to 10 inches. This is 2 to 10 inches below the height a year ago. The normal on July 4 should be knee-high. Hot forcing weather during July and August, with an abundance of moisture, is necessary to bring the crop up to last year's condition. Green bugs are damaging oats in central Illinois and western Indiana, and are found in increased numbers in a small portion of Iowa and in southern Minnesota and South Dakota. Warm weather is, however, developing the parasite which destroys the green bug. Oats have made moderate advancement over a part of the leading states, but condition on the whole shows little change. The hay crop is expected to be better than early indications. The first car of new hay arrived here July 3 from Indian Territory and sold at $13 per ton. Farmers are offering new red winter wheat from Illinois and Indiana in moderate quantity.

CINCINNATI. — The crop situation improves daily. Wheat and oats are in excellent condition; the former is now ripening and promises an abundant yield. As yet no harvesting has been done. Oats will not yield as heavy as last year. Tobacco is growing nicely. Farmers were long delayed in planting by unfavorable weather, but work is about completed. Corn promises an abundant yield, although stands are irregular owing to soil conditions and sun exposure. In bottom farms and a few hill side patches some replanting had to be done, caused by standing water and cold soil. In a few localities along the Ohio river the plant scarcely exceeds four inches in height and first plowing of it is not yet done. On the higher levels corn is ten to twelve inches high and first plowing is done. The same localities in ordinary years would have corn waist-high at this time of the year. All corn looks well and is growing fast, while the quality and amount of the crop will depend upon the weather in August. Farmers are hopeful though not optimistic.

INDIANAPOLIS. — Winter wheat is being harvested in the southern part of the state, also to some extent in central portion. Green bugs are reported in many parts of the state, but are not believed to have damaged anything but oats to any extent. Corn is reported from fifteen to twenty inches high and is said to be in good condition.

TERRE HAUTE.—The watermelon crop will be late and indications point to scarcity. The oats crop is threatened with injury by green bugs. Strawberry yield about one-fourth of the average crop, though of good quality. Wheat will be above the average yield. Corn is looking well and promises a fair crop.

ST. PAUL.—The past week has witnessed a great improvement in crops. Although there has been too much rain, the prospect was never better for everything except corn. Wheat is running up and will soon head out. Oats, barley and winter rye are heading and the crop is heavy. Flax looks healthy and is making rapid growth. Hail has done considerable damage in some sections.

MINNEAPOLIS.—Crop reports continue of a very favorable character. There is a smaller acreage of wheat but more of other grains, and while the season is about two weeks late, this is regarded as unlikely to affect the result if weather from now is right. Recent rains have been very acceptable in some localities.

DAVENPORT. — Corn, generally twenty to twenty-four inches high at this time of year, is only about ten inches this year. The weather the past week was thought favorable, lacking warm nights.

DES MOINES.—The area of winter wheat in Iowa is about 100,000 acres, and will average twenty to thirty bushels per acre. Corn indicates 2 per cent. increase in acreage, but is fully fifteen days late. It is also deficient in stand and requires favorable conditions for field work. Its height now is about eight inches short of normal for this period.

ST. LOUIS.—Farmers are in the midst of winter-wheat harvesting, but up to this time there has been very little threshing. However, millers from several sections report that the yield in Missouri and Illinois will be possibly better than last year's. Corn is very spotted, and farmers report it from three to four weeks late.

ST. JOSEPH. — Wheat cutting has just commenced. Corn averages about twelve inches in height. Condition is good, but the plant is two weeks late compared with normal years.

KANSAS CITY.—Harvesting of wheat has not progressed far enough to obtain accurate figures as to the yield. In Kansas the yield is estimated at fifteen to thirty bushels per acre. Corn is well rooted, but is still two weeks behind. The plant ranges from twelve to twenty-four inches in height, as compared with thirty to forty inches, the usual height at this date in normal years.

WICHITA.—Corn is two feet high and in good condition, but two weeks behind the normal. Wheat is of fair quality but poor as to yield, running five to ten bushels to the acre. This state has about one-third of a crop.

OMAHA.—Weather conditions have been very favorable to growing crops. Corn is making good progress, but is ten days to two weeks late. The acreage exceeds last year's; it will average from ten to sixteen inches in height. Harvesting of winter wheat is now in progress in some sections; quality is reported good. The Nebraska crop is estimated at about 80 per cent. of last year's.

OKLAHOMA.—Wheat harvesting is well advanced, with a light crop, and a probability that it will not exceed ten bushels per acre. Corn is fairly well advanced as regard maturity of plant, which is in tassel. Wet weather has prevented proper cultivation, and the weedy growth in the corn fields will shorten the yield materially.

CHARLESTON, S. C.—Cotton has improved considerably during the past week, owing to very favorable weather.

ATLANTA.—Cotton is still making good headway, and weather continues favorable.

BIRMINGHAM.—Crop conditions show steady improvement.

MOBILE.—Ideal weather continues, and a vast improvement is reported in the cotton situation in this territory. Light rains falling occasionally are beneficial to cotton, corn and truck.

MACON.—Crops are much improved by good rains and sunshine.

MONTGOMERY.—The weather during the week was very favorable to crops. Cotton is growing well, and the condition of the crops is much better, though three to four weeks late.

MEMPHIS.—Weather conditions are favorable. Corn and cotton are about six weeks late but making good progress.

LITTLE ROCK.—Cotton is generally small, but improving rapidly with favorable weather. The crop is well cultivated, and a late fall will bring it up to the average.

NEW ORLEANS.—Crop prospects are encouraging. Cotton is rapidly working up to the average condition, fields are generally clean, and there is little complaint of insects. There is some shortage of labor. Sugar-cane prospects are the best in years, and rice is making favorable progress.

DALLAS. — Cotton has shown considerable improvement.

WACO.—Crop conditions are very much improved in this section. A good corn crop is assured, and cotton is making good progress.

TACOMA.—Timely rains have assured a better fruit crop.

TRADE REPORTS.

Good business still continues in the dry-goods trade in New York. Cottons remain firm and active. Silks are strong and prices are well maintained. Dress goods are in fair request, as are worsteds for men's wear, but the clothing trade is quiet. Raw silk is firmer. The cloak and suit trades show further improvement. Business is brisk, collections are better, and there appears to be a general bracing up all along the line. The volume of business in wholesale men's furnishings continues undiminished, and manufacturers already report having received some good fall orders. While warm weather has stimulated the straw-hat business, sales do not equal those of last season. Retail milliners are doing fairly well, but manufacturers of women's hats complain of a dull season. In the hardware and raw metal trades complaint of slow collections is general, and houses which for years have been known as prompt payers and taking advantage of discounts have of late been taking a little more than full time. Structural steel is in less demand. Copper is still unsettled in price, and purchasers are holding off in the expectation of a fall; collections are slow. Better weather has improved the automobile and allied trades; prices are firm. Binder twine is irregular, but there is an absence of the demoralization which usually occurs under such crop conditions as at present exist. Retail business in jewelry and diamonds is quiet. In the coal trade some improvement is reported in bituminous, but steady consumers of anthracite are not buying in advance. Butter is coming to market in smaller quantities; prices are firm. Cheese has advanced ½ cent. Though 15,000 cases of eggs went into cold storage, prices were fractionally advanced. Retail grocers report business quiet, but not unusually so. Demand for live stock and dressed meats exceeds the supply, and prices are very firm. Real estate is quiet. The lumber and building materials trade shows some improvement both in volume of business and price of materials, bricks especially being dearer. Collections, however, continue slow and there is still some renewal of paper. Collections in the wholesale paper trade are fair to good and business is of average proportions.

The following telegrams show trade conditions at the cities mentioned for the week ending July 5:

BOSTON.—Seasonable dry goods and apparel continues in active demand from retailers and the prospect for closing up the season's trade satisfactorily is better. Jobbers are getting more reorders for wash fabrics and lightweight material, and collections, since retail trade has become active, have materially improved. The markets for textile fabrics generally are very firm and mills are largely sold ahead. Cotton goods continue to show increasing strength, and in many departments there is scarcity of supplies. Dealers in chemicals report business as rather quiet, with lower prices for blue vitrol and nitrate of soda. Drugs are in seasonable request. The market for dyestuffs and tanning materials shows little animation, but prices hold steady. Conditions in the furniture trade are somewhat improved, but collections continue slow. Business is of fair volume in electrical supplies and collections are normal. Business in provisions has been of moderate volume and prices, as a rule, well sustained. In eggs prices are on a low level, and although an active demand is in progress the supply is ample. Dealers supplying summer resorts feel encouraged.

PROVIDENCE. — The cotton-goods market is strong. Manufacturing jewelers continue quite busy for the season. General trade conditions are better than early in June owing to warmer weather, which has also had a favorable effect on the summer-resort business. Paints and oils are in good demand. Collections are fair.

PORTLAND, ME.—Railroad travel to summer resorts continues heavy. This brings increased demand for provisions, groceries, clothing and dry goods.

PHILADELPHIA.—Wool is quiet, manufacturers buying only for actual needs. Carpet wools are particularly slow to move. There is a fair demand for cotton yarns, and manufacturers of dress goods and men's wear seem to be actively employed. Dry-goods jobbers report seasonable trade, but nothing very large; collections are fair to slow. The larger retailers have had a fair week, and sales are said to be up to, if not in excess of, the same time last year. Jobbers of chemicals and dyestuffs report a lull on account of warm weather; collections are slow. Business in paints and glass is somewhat disappointing and prices are barely firm. Wholesale lumbermen say business is not quite up to expectations, though there is a fair volume of business being transacted in pine and other building grades. Retailers report good trade, but no large orders of note. Prices are firm and collections fair. Large stocks of winter hides, which had accumulated, have now been moved at special rates, and this has put the market in better condition. Brisker trade is looked for in the near future, and prices are firmer. There is a fair demand for calf and sheep skins, and prices are advancing. Leather is not active, and tanners are buying raw material sparingly, in the expectation of lower prices for the finished product. Glazed kid conditions are improving, though the market still reflects the effect of recent large sales, and business continues rather dull, with prices drooping. Retail shoe dealers say they have been very busy the past week on spring and summer lines, and the market shows a decided improvement. The annual clearance sales are now being prepared for, but there is a disposition to hold them a little later this year because of the backward spring, which retarded regular business. Wholesalers report liberal orders for future delivery, and there seems to be an especially good demand for glazed kid and high-cut colored shoes. Prices are steady. Tobacco inquiries, also sales, are heavier in Sumatra, and seed-leaf Havana is dull. Cigar factories are busy, some, a month behind on orders, are obliged to refuse more business when goods are required sooner. Prices hold firm. Collections are slow. Liquor sales are about as light as usual at this season. Straight rye has been dull for months. Blends and spirits have sold better, and old goods in first hands are sold up close. The marked activity so long maintained in the iron trade has yielded to a more quiet condition, the result of buyers anticipating their requirements for the remainder of the year rather than to a decline in consumption. Production is large, stocks are not being accumulated, and prices remain steady. Trade in coal for domestic purposes is quiet. Steam coals are in fair demand, prices for the higher grades being steady, the lower grades rather weak.

PITTSBURGH.—Pig iron is quiet. Basic iron is not relatively as strong as Bessemer at this time, owing to small tonnages being thrown upon the market by postponed deliveries on account of shutdowns for repairs and the cropping out of limited quantities in other ways. Finishing mills are still being operated to the limit of capacity and a fair amount of new business is coming forward, though not so heavy in volume as in the recent past. Coke has been strengthened somewhat by changes made in contracts and the continued operation of furnaces to full capacity. Spot quotations for pig iron at the valley furnaces are as follows: Standard Bessemer, $23.50; chilled basic, $23; No. 2 foundry, $25 and gray forge $22.35. Standard Connellsville furnace coke is quoted at $2.35 and foundry coke $3.25 to $3.50, at the ovens.

BUFFALO.—Trade conditions, both in wholesale and retail lines, remain about the same as reported last week, but collections are slow.

BALTIMORE.—Clearance sales predominate in retail lines, and business is active. Wholesale and manufacturing lines are rather quiet, due mainly to advance of midsummer dullness. Jobbers expect fall business to open up with greater activity than last year, owing to anticipated early arrivals of out-of-town buyers on their way to Jamestown. Trading in dry goods and notions is of moderate volume, with prices very firm. Business in boots and shoes is fair and mainly for fall account. Harness, crockeryware, woodenware and paper are in moderate demand. Groceries show improvement, with canned goods in demand at high prices. Oils and turpentine are firm, with spirits rather quiet. Receipts of Maryland leaf tobacco are liberal, with sales fair. There is a moderate demand for the better grades of lumber, with prices firm; yards are well supplied with cheaper grades, deliveries having been heavy the past two

weeks. Building materials are in fair demand. Drugs at wholesale are brisk. Collections in general are under normal, but in some lines better weather conditions have resulted in slight improvement. Money continues tight.

CINCINNATI.—Business continues to lag, and while manufacturers report an abundance of orders, workmen are being laid off in some of the larger factories because of summer dullness. Trading in almost every line is quiet. The borrowing demand for money is smaller in the aggregate than last week, but the movement of currency to and from the country has been fairly active. However, receipts exceed the outgo.

CHICAGO.—Jobbers report a fair business, but nothing unusual at this season. Most sales of dry goods and clothing are to fill out broken assortments of interior retailers. Buying of goods for fall delivery has slackened. Iron and steel interests show moderate activity, with steel rails and structural material receiving the most attention. Purchases of pig iron continue limited to small lots, and furnace men are trying to maintain prices. Reduced prices lately made on bituminous coal are being shaded, owing to increased offerings from the east. Lumber is selling more readily, with local building operations showing a slight enlargement. Prices on common brick are easier on increasing supplies. Choice steers sell at $7.25, the highest price since 1902. Hogs and sheep are at almost the lowest of the year. Money is firmer, with demand active. Banks are closely loaned up. Commercial paper is being bought by interior banks. Collections generally are fair.

PEORIA.—With warmer weather trade conditions have improved somewhat, but, as a rule, sales are not so large as a year ago. Internal revenue collections for this district for the fiscal year ending June 30 amounted to $35,577,448, a record, and an increase over last year of $989,800.

INDIANAPOLIS.—General trade conditions are good, considering the season, and collections have slightly improved.

LOUISVILLE.—Retail trade is good and merchants are doing their best to make up for the bad spring. Wholesale business in all lines is fairly good for this season of the year. Clothing manufacturers have sold their fall output and report a large season, provided cancellations do not multiply. Whiskey is quiet, as usual at this time of year. Collections continue slow.

ST. LOUIS.—Manufacturers and jobbers in all lines report a better feeling than has existed for several weeks. Retail merchants throughout the country report a more satisfactory trade, and this is reflected by their remittances. Dealers in hardware and builders' supplies report comparatively few undertakings in the way of building, but their trade up to this date has not been disappointing.

KANSAS CITY.—Jobbers and retailers in dry goods and kindred lines report a very active week. Trade in summer wearing apparel has been excellent. Wholesalers in leading lines report increases in sales for fall delivery of 10 to 25 per cent. Collections are good.

MILWAUKEE.—The volume of trade in retail and jobbing lines is up to expectations. Collections are fair.

DAVENPORT.—Retail trade for June did not equal that of the corresponding month last year. Collections are slow.

ST. PAUL.—Business has been quite brisk in all lines, but orders for fall delivery in shoes are not so large as last year, nor are sorting orders as heavy. Dry-goods orders are extremely heavy, and all lines report sales in excess of last year. Collections have been quite good from certain sections, and altogether they hold up with what they were a year ago.

MINNEAPOLIS.—Seasonable weather is helping general business very much. Retail and wholesale dealers in merchandise are profiting thereby. No marked activity is noted in any line, but all seem to be pleased with prevailing conditions. Flour is in moderate demand and production has been curtailed. Lumber is active and firm.

OMAHA.—Wholesale and retail trade shows considerable improvement. Jobbers in leading lines report an increase of sales over last year, but collections are only fair.

OKLAHOMA.—Wholesale and retail trade makes a good showing for this season, and collections are good.

CHARLESTON.—Wholesale dealers in dry goods, clothing and shoes anticipate a good fall trade. Collections are slow.

AUGUSTA.—Wholesale trade is quiet, while retail trade is fair. Collections are slow.

ATLANTA.—Wholesale traders in most lines report improvement in orders and collections, and there appears to be more confidence felt in the ultimate outcome of the year's crops. The Georgia legislature, now in session here, have a total prohibition bill under consideration, and it is believed by some that it will be passed. This has naturally created alarm among liquor dealers and caused them to curtail orders.

MACON.—Summer dullness pervades trade. A run on a local bank caused some excitement which has since subsided, because payments were promptly met.

BIRMINGHAM.—Iron continues firm, with demand and price steady. Other lines of business are normal, with collections fair.

MOBILE.—Jobbers report only a fair business for fall delivery, with collections slow. Retailers have large stocks of summer goods on hand which they are selling at reduced prices, owing to the exceptionally late spring. There is little or no improvement in the local lumber situation, and an occasional shutdown by a mill reflects the situation.

MONTGOMERY.—Wholesale and retail trade continues fair. Warm weather has increased retail trade to some extent. Collections are very slow.

CHATTANOOGA.—Collections are fair.

MEMPHIS.—Retailers are working off summer goods at reduced prices. Drummers are starting on the road. Collections are fair.

NASHVILLE.—Business, wholesale and retail, is holding up well despite the encroachment of summer, and dealers in mercantile lines anticipate no slump. Prices hold firm, with tendencies toward an advance, especially in the cost of living. Trading in investment securities is excellent.

LITTLE ROCK.—Jobbers report business rather quiet, but retail trade is good. Collections are only fair.

NEW ORLEANS.—Retail and department stores report a satisfactory volume of seasonable business. Jobbers of groceries and foodstuffs are doing more than was anticipated, while in dry goods, clothing, boots and shoes there are good orders going on the books for fall shipment. Collections are fair, and, all things considered, they are probably better than the usual summer collections.

DALLAS.—Trade continues quiet and collections are slow.

WACO.—Trade is quiet and collections very slow.

SAN FRANCISCO.—Business is quiet, with money tight and collections fair.

SEATTLE.—The sales of summer goods have been materially affected by cold weather and general inclemency. This is making business somewhat dull for jobbers at present.

SPOKANE.—Business conditions continue prosperous, with collections fair. Building operations are active.

TACOMA.—Wholesale and retail trade holds steady.

PORTLAND, ORE.—The volume of trade with jobbers far exceeds any former year. Lumber demand has diminished considerably, and the larger producers are running only ten hours, instead of twenty, as previously. Building operations continue active.

TORONTO.—There is now little complaint regarding business here. Wholesale houses report a satisfactory movement of sorting lines. The dry-goods trade is fairly brisk. An excellent demand is reported for all summer lines. Warm weather during the past few weeks has proved a great boon. To some extent the time that was lost owing to the late spring has been made up, and the volume of business is now satisfactory. As the crop situation here and in the west takes on a more and more cheerful tone, the outlook for fall and winter trade brightens. Manufacturers are receiving large orders for heavy goods, and there will no doubt be much difficulty experienced in the filling of orders. Shipments of groceries to the west and to northern Ontario are heavy. There has all season been a heavy run on canned goods, and several lines are now run out. Prices are advancing. Hardware is active. Metals are firm, with a brisk demand in all lines. Railroads whose needs are urgent, owing to construction work going on, are again turning to the United States for rails. Wire rods are reported higher. Country trade is showing a fair tone. Produce is generally firm, with receipts inclined to be light. Wool holds fairly firm. The clip promises to be a good one, and expectations favor easier prices. Hides and skins are easier.

MONTREAL.—The dry-goods trade reports a brisk business in all lines of summer goods. Sorting orders are coming forward well, and many lines which were quite slow last month are now moving briskly. Values generally are firm. Canadian colored cotton mills have issued new lists showing advances of as much as 15 to 20 per cent. on some cheap lines. Threads are also higher. There has been an excellent summer business in men's and women's ready-made clothing. The demand for these lines has been brisk in all parts of Canada, and while prices have generally shown very marked advances, the increased trade has mostly been in the better class of goods. Linens are very firm. It is expected here that fur prices will show marked advances next season. Muskrat fur is showing particular strength. Hardware is very brisk in all lines. There is an excellent demand for small goods and for paints and oils. Eastern trade is reported particularly good, following improvement in the fisheries. The grocery trade shows a good tone. Advances in the price of tea have led the Dominion government to revise regulations against adulterated teas, and all teas consigned for consumption must be tested by the customs before being released. All canned goods are firm. It is stated no asparagus will be packed this year, owing to a short crop. There has recently been a considerable increase in the export trade in butter and cheese. The market holds firm in both lines. Exports of cheese so far are 100,000 boxes less than those of a year ago. Collections are generally fair to good.

VANCOUVER-VICTORIA.—Wholesale trade is brisk in all lines. Groceries and provisions are being shipped in large quantities to the lumber and mining camps of the interior. Dry-goods stocks are moving well, and the outlook for later trade is encouraging. Great activity in the building trades and in local industries generally is responsible for a brisk demand for hardware supplies, and values are firm. Collections are generally good. The shipping trade along the coast is having a busy season.

WINNIPEG.—The outlook for trade is considerably brighter than it has been at any time this year. The crop outlook has been steadily improving ever since early in June, and although it was planted about three weeks late it is now calculated to be but ten days behind. Indications now point to a heavy yield, and the quality of the grain should be generally good. These facts have had a great effect upon business, and a good fall and winter trade is confidently looked forward to. Summer trade is showing a good tone. Collections are still a little slow, and money is badly needed in all parts of the country. Speculation in real estate is still a feature. The railroads are making gigantic efforts to increase their facilities in order to be able to take care of the next crop when it comes to hand.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending July 4 shows an aggregate of $2,768,673,000, as against $2,404,600,000 last week and $2,861,720,000 in the corresponding week last year. Canadian clearings for the week aggregate $82,358,000, as against $78,536,000 last week and $73,280,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	July 4	Inc.	Dec.	June 27
New York	$1,696,309,000	----	10.6	$1,342,601,000
Chicago	239,036,000	20.7	----	237,017,000
Boston	159,543,000	11.9	----	138,466,000

Money Market.

As was anticipated, the New York loan market exhibited the effects of the July 1 disbursements and changes, call money running up to 15 per cent. on last Monday, while renewals of such arrangements were quoted at 8 per cent. By Wednesday, however, the maximum quotation had receded to 7 per cent., and renewals were made at 6½ @6 per cent., while on Friday the prevalent rate again receded to 5½. It was stated that the Treasury was expediting payments for the redemption of the maturing 4 per cent. bonds, and it was expected that New York would gain money from this source for the week. It is, however, recognized that the monetary situation is influenced at the moment by various divergent factors, making the outcome as regards to-day's bank statement somewhat uncertain, though it was estimated on Friday that on the total movement for the week the banks had gained about $5,000,000 in cash. The unexpected strength which again appeared in foreign exchange and the possibility of further gold exports to Europe were considered elements in the situation, one of the incidents of the week being the shipment of $1,000,000 specie to Amsterdam on last Wednesday, this unusual transaction being the subject of much comment. In connection with time money the situation was very close. Many institutions are practically out of the market for that class of loans, and the offerings of such funds through brokers are made at stiff figures, 6 per cent. being generally exacted for over six months' arrangements, while 5¾ per cent. was quoted for six months' maturities on mixed collateral. There also appeared to be a better inquiry for time money from Wall street, the rise in the call-loan rates tending in that direction. Commercial paper was, under the circumstances, very inactive, the high rates checking offerings, while local institutions are doing nothing in that line beyond caring for their regular customers.

New York Banks.

Last Saturday's New York Clearing House averages reflected both the gold shipments which had occurred early in the week and the preparations for the July 1 disbursements. The figures of the statement showed a loss of $6,854,900 in the cash items, which was some $1,800,000 larger than the estimated actual movement. On the other hand, the reduction of the loan account by $7,813,700 was doubtless due to the shifting of loans from the banks to trust companies and also borrowings made abroad, there having been free offerings of finance bills by international houses during the week. The loss in deposits, which was $14,950,000, agreed very well with the two preceding changes, so that the reserve required was reduced by over $3,700,000, making the loss in the surplus reserve $3,117,000, and establishing the total surplus at $2,509,000, as compared with $12,000,000 in 1906, $11,000,000 in 1905 and over $36,000,000 at the corresponding period in 1904. The following compares the figures of the statement with those of the preceding week.

	June 29	June 22	Changes
Loans	$1,123,539,100	$1,134,352,800	D. $7,813,700
Specie	200,792,500	208,290,500	D. 7,498,000

Foreign Exchange.

In the face of the high quotations for money at New York caused by the July 1 disbursements, the foreign exchange market developed activity and decided strength early in the week. The tone was, furthermore, somewhat excited, and fluctuations at times varied very rapidly within a narrow range. It was noted that there appeared to be a brisk inquiry for remittances, while the supply of commercial bills was limited. Some offerings of loan bills, it is true, came upon the market, though not in sufficient quantities to affect the market. Demand sterling consequently rose by Tuesday to 4.87.10, and remained at between that figure and 4.87 on Wednesday. A good deal of interest was displayed in the foreign financial situation, it being noted that London exchange at Paris was lower at 25 francs 14 centimes, and there was a renewal of negotiations by the Bank of France to take gold from London or New York. Late on Tuesday afternoon two international houses jointly engaged $1,000,000 in United States coin for shipment to Amsterdam, the unusual destination causing much comment, while the transaction was described as being a "special" one. This amount makes the total of the gold shipped from New York since May 27 $25,800,000, of which Paris took $22,050,000, London $2,750,000 and Amsterdam $1,000,000. The exchange market continued firm on Friday, but no gold was engaged, and advices regarding the foreign financial position were more reassuring.

The Bank of England's discount rate is unchanged at 4 per cent. It displayed this week a decrease of £335,000 in gold, and the proportion of reserve to liability was 38.34 per cent., compared with 42.73 per cent. last week. There was an increase of £4,913,000 in the borrowings by the market from the bank, the weekly return, in fact, showing in its different items the effect of the July settlements throughout Great Britain. In the London open market an easier feeling was shown at the end of the week, with money in better supply, call loans being 3¼ @3⅜ per cent. and discounts 3¼ @3⅛ per cent. The Bank of France retains 3½ per cent. as its discount rate. It gained 10,675,000 francs in gold for the week. In the Paris market discount is quoted at 3¾ per cent. At Berlin the bank rate is 5½ per cent., the market for discount being 5 per cent. for short and 4½ per cent. for three-month bills.

New York Securities Market.

In spite of various apparently discouraging circumstances, the tendency of the stock market this week has been to advance, and also to become somewhat broader. Money, as was natural at this period, has been higher, the call-loan rate advancing to 15 per cent. on last Monday. Foreign exchange also showed unexpected strength, and there was more or less talk of renewed gold exports to Paris or London. In fact, $1,000,000 specie was engaged on last Tuesday for shipment to Amsterdam. The July government report on the cotton crop was unexpectedly adverse, as were also some of the current accounts about the condition of wheat in certain sections. Nevertheless, the market, though it wavered a little on Tuesday and again on Wednesday forenoon, retained a bullish undertone and closed for the July 4 holiday with an exhibition of rising tendencies in prices, there being a further advance throughout the list when trading was resumed on Friday. It is true that the dealings throughout were in the main professional in their origin. The appearances, however, were that interests which have been out of the market for some time back, if they were not actively engaged on the bear side of the speculative market, have changed their position and are now assuming a bullish attitude. In this connection not a little significance is attached to the action of the so-called Morgan stocks, such as United States Steel, Erie issues and the Southern Railway shares, all of which have shown the renewed presence of effective support after having been weak features for some six months past. A variety of favorable rumors and bullish utterances from people of more or less financial importance have been forthcoming, and the bearish professional element has found its ability to attack and depress prices greatly circumscribed. This has naturally led to a great deal of covering up of short contracts, but the impression among the active participants in the market is that it is showing a reaction from the pessimism which so recently prevailed, and that even if the movement is not to be considered as a permanent or sustained one it is, nevertheless, likely to go somewhat further if the interests which are active in assisting it so will. More or less further talk has been heard about the development of an investment demand for the July 1 interest and dividend payments, but, except in a very desultory way, there has been little buying of that kind.

Features and incidents have both been lacking. The chief activity and interest centered once more in Union Pacific, about which there were a variety of favorable intimations. The fact that subscriptions for the company's new bonds mature on July 10 was thought to have some bearing on the bullish manipulation of the stock. As already mentioned, the United States Steel issues were strong and had rather good support. Rumors were again circulated that at the next quarterly meeting of the directors the dividend rate on the common stock will be increased from a 2 per cent. basis to 3 per cent., or possibly 4 per cent. The Erie stocks were helped by reports that the regular dividends on both the first and second preferred stocks will be shortly declared, and in the case of Southern Railway it was given out as coming from inside sources that there was no likelihood that the preferred dividend would be passed or reduced. Southern Pacific kept pace with Union Pacific, and there was also renewed bullish manipulation in Amalgamated Copper, Reading and other favorite speculatives. The movement also influenced the market position of a number of the specialties and industrials.

Boston Stock Market.

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
January 3	4,255,270	3,839,741	1,411,947
January 10	4,073,110	4,768,772	700,950
January 17	2,636,460	3,448,862	1,138,974
January 24	3,328,255	3,433,585	1,101,587
January 31	2,102,216	3,056,208	945,358
February 7	3,319,930	3,241,939	987,775
February 14	2,500,139	2,951,612	536,540
February 20	2,932,491	2,357,068	923,022
February 28	2,857,420	2,303,476	907,926
March 7	2,251,303	2,563,983	1,285,956
March 14	2,080,034	2,010,237	895,742
March 21	1,878,614	2,293,012	1,044,595
March 28	2,707,566	1,542,852	988,600
April 4	3,460,872	2,155,816	886,017
April 11	1,831,105	2,362,347	1,292,301
April 18	3,102,467	1,844,798	1,242,267
April 25	2,583,242	2,149,684	1,260,316
May 2	2,234,756	2,104,748	1,279,864
May 9	2,994,419	2,142,062	899,355
May 16	2,800,177	2,716,783	1,512,550
May 23	3,684,683	3,761,206	1,221,208
May 30	2,401,994	2,526,739	1,309,223

Smallest recorded exports, week end'g Feb. 16, 1905			536,540

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week ending June 29 and for the fifty-two weeks of the present season compares with similar periods one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
June 29, 1907	344,643	3,201,300	5,498,050	2,388,027
June 30, 1906	389,806	1,802,403	5,084,053	3,825,702
July 1, 1905	302,333	1,708,962	5,829,725	2,601,597
Season				
July 1, 1906, to June 29, 1907	20,814,317	249,212,131	216,967,814	200,970,441
July 1, 1905, to June 30, 1906	20,197,464	231,032,958	195,077,722	218,090,009
July 1, 1904, to July 1, 1905	16,983,343	206,904,009	186,515,507	161,952,949

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*June 28,* 1907	*June 21,* 1907	*June 29,* 1906
American	2,276,225	2,416,457	1,759,466
Other kinds	1,340,000	1,345,000	1,355,000
Total	3,616,225	3,761,457	3,114,466

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	June 28, 1907	*June 21,* 1907	*June 29,* 1906
Great Britain and continent	2,249,000	2,307,000	1,601,000
Egypt	82,000	80,000	79,000
India	758,000	781,000	904,000
United States	527,000	584,000	530,000
Total	3,616,000	3,761,000	3,114,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	26,043	26,754	51,295
Season	13,163,825	13,137,782	10,744,216

Wool Markets.

There has been more activity during the past week, particularly in staple wools. Many good-sized lots have changed hands, and more could have been done but for the holiday interruption. Staple fleeces, since the foreign fine merinos were cleaned up, have been in very good demand, as have also staple territories, three-eighths and above. Old territory wool in the grease, which was consigned last year, has sold on a basis of 68@70 cents clean for fine and 65@67 cents for fine medium. Old scoured territory has sold at 68@70 cents for fine and 65@66 cents for fine medium. The new wools have sold very well, the sales of the past week including Arizona at 23@24 cents in moderate lots, fine Idaho at 23@24 cents, large lots of eight months' Texas at 23@24 cents, twelve months' Texas to arrive at 27@27½ cents and higher, staple Oregon at 72@73 cents clean for No. 1, washed delaine fleeces at 36@37 cents, unwashed delaine at 30@31 cents, and medium fleeces at 33@34 cents for three-eights and above. Australian wools are quiet, as the fine merinos are well cleaned up. New Zealand crossbreds are in heavy supply but in light demand. South American wools are more active, especially Lincolns, which easily bring 36 cents for choice lots. In the country fleece wools are very active, with prices tending upward. Ohio washed delaine recently sold at 35½@36 cents, 33@34 cents for fine, and 29@31 cents for medium, with buyers many and the interest increasing. The most interest still centers in Montana, where there is a scramble for wool, with fully one-half of the clip already sold. The Bear clip of fully 1,000,000 pounds has sold at 21½ cents, and the Ray clip is out of growers' hands. Recent sales in Montana were at 21½@23 cents, with some fine clips at 24 cents, but the bulk brought around 22 cents. Wyoming clips are well sold up at 19@21 cents. In California, the Humboldt and Mendocino wools sold at 24@25½ cents, higher than last year on account of the better condition. At the London sales, which will open July 9, several Boston buyers will be in attendance. The offerings will be 182,000 bales, of which little is suitable for this country. Predictions are that fine merinos and fine crossbreds will open fairly firm, but that low crossbreds will be irregular.

Boston Shoe and Leather Market.

Many factories were shut down for the past week, and business has been quiet throughout the shoe and leather district. Western buyers are expected to become active and better things are expected after the holidays. The warm weather has given retailers great relief, and the jobbers have shared in the result. Conditions point to a better business during the coming season. The *Shoe and Leather Reporter's* figures this week complete the first six months of 1907, viz: Last week, 90,510 cases; preceding week, 86,324; last year, 114,022; total for 1907, 2,465,340; total for 1906, 2,564,449; decrease, 99,109.

NEWFOUNDLAND'S MINES.

"The extent of the Newfoundland fisheries, in which such a large proportion of the inhabitants of the colony are employed, may have caused the importance of its mineral industry to be overlooked to a certain extent," says the *Scientific American*. "As a matter of fact, however, recent investigation has shown that deposits of copper and iron ore in various forms are so extensive that the island promises to contribute a very large percentage of these metals to the world's supply for an indefinite period. While gold bearing quartz as well as lead and silver ores have been found in various parts of the island, the accessibility of the iron and copper deposits has caused attention to be confined to these almost entirely. The mining of copper has been carried on about forty years, but only recently have the beds been worked on an extensive scale. The principal center of the industry is in the vicinity of what is known as Tilt Cove, near Notre Dame bay, on the northern coast. There are four mines adjacent to Tilt Cove, named North, East, South and West respectively, according to their situation from the town itself. About fifteen miles distant, at Bett's Cove, another bed of ore is now being worked, which is apparently of considerably larger dimensions, while another extensive body is located at what is called Little Bay.

"At present the output of the three localities referred to ranges between 75,000 and 85,000 tons of ore annually. None of it is smelted in

Newfoundland, about half being shipped to England and half to the United States for this purpose. Nearly all of the deposits are found in the serpentine formation, and are in the lower Silurian series of rocks. The ore occurs, however, in a chloritic slate, which lies parallel to the serpentine rock. The ore assays as high as 12 per cent. of pure metal, and the veins have been traced a distance of forty miles in the Notre Dame region.

"It is an interesting fact that the iron-ore deposits, which have been worked on a considerable scale, are located on islands in the bays which indent the coast of Newfoundland. By far the most notable is Belle Isle, in Conception bay, a few miles from St. John's itself. * * *

"An estimate of the ore near the surface of Belle Isle places it at nearly 30,000,000 tons. The output at present averages about 400,000 tons annually, nearly all of which is sent to Nova Scotia, where it is smelted at the furnaces of the Dominion Steel & Coal Company, at Sydney. * * *

"The ore at Belle Isle contains from 48 to 56 per cent. of pure metal and yields a pig iron especially suitable for rail and structural steel, into which much of it is manufactured. The furnaces of the Dominion Company, which are of modern design, will smelt from 1,200 to 1,500 tons of ore daily.

"The mining of iron pyrites is conducted on an extensive scale at Pilley's island, in Exploits bay. * * * At present Pilley's island is yielding nearly 75,000 tons yearly, most of which is carried to the United States for reduction. An analysis of the ore shows that it contains between 50 and 60 per cent. of sulphur, which is secured in the treatment, while the metallic iron is utilized in the composition of a high grade of steel.

"As in the case of the copper deposits, the iron-ore beds, especially in the eastern section of Newfoundland, are undoubtedly very extensive, for veins have been traced along the shore of Conception bay, a distance of over fifty miles. The quantity and accessibility of the Belle Isle deposit, however, has caused the industry to be principally confined to this place."

CANADA'S PROGRESS IN MANUFACTURING.

Ontario still distances the other provinces both in the total magnitude of its manufacturing output and in the volume of increase thereof. While not complete, the figures given are conclusive as to these points. In fact, Ontario manufactures more goods than all the rest of Canada. This is shown in the following table:

	1901	1905
Canada (not complete)	$481,053,375	$712,664,835
British Columbia	19,447,778	38,013,515
Manitoba (not complete)	12,924,439	27,609,268
New Brunswick	20,972,470	22,133,681
Nova Scotia	23,592,513	32,545,939
Ontario (not complete)	241,533,486	365,692,144
Prince Edward Island	2,326,708	1,851,615
Quebec (not complete)	158,287,994	217,224,073
The territories (not complete)	1,954,987	7,594,600

The following are Ontario's centers of manufacture whose outputs, as exhibited by the census of 1906, do not fall below $3,000,000 in value:

	1901	1905
Toronto	$58,415,498	$84,689,253
Hamilton	17,122,346	24,625,776
Ottawa	7,638,688	9,336,024
London	8,122,185	12,626,844
Peterborough	3,789,164	11,566,805
Brantford	5,564,695	8,545,679
Berlin	3,307,513	5,449,012
Sault. Ste. Marie	738,472	5,251,643
Guelph	3,689,183	4,814,925
Kingston	2,945,173	4,329,607
Stratford	1,935,176	3,824,586
Sarnia	2,645,797	3,825,470
Walkerville	2,017,179	3,566,450
Toronto Junction	1,951,359	3,577,861
Chatham	2,714,977	3,500,200
St. Catharine's	2,070,543	3,042,343

Quebec's chief towns and cities made the following showing:

	1901	1905
Montreal	$71,099,750	$99,746,772
Quebec	12,779,516	11,388,045
Maisonneuve	6,008,780	6,866,107
Ste. Cunegonde	2,040,381	5,475,688
Hull	3,118,205	4,892,381
St. Henri	4,139,391	4,372,949
Lachine	2,909,847	4,309,795
Sherbrooke	2,522,293	3,074,388

Nova Scotia towns and cities rank as follows in manufacturing, none being included whose output falls below $3,000,000:

	1901	1905
Halifax	$6,927,552	$8,145,016
Amherst	1,511,907	4,174,929
Sydney	631,396	4,058,659

St. John, whose output in 1901 was $6,712,769, and in 1905 was $6,918,638, is the only New Brunswick center at which as much as $3,000,000 worth of manufactured merchandise was produced in 1905.

In Manitoba, Winnipeg's output, shown by the census of 1901 to be valued at $10,078,665, is valued by the census of 1906 at $18,983,299.

In British Columbia the most active manufacturing center was Vancouver, whose output in 1901 was valued $4,990,152 and in 1905 at $10,067,556.

UNITED STATES PENSIONS.

The pension roll of the United States amounts to nearly $139,000,000 per annum. This sum is distributed among 985,971 persons. Pension vouchers go to nearly every country in the world, and the amount distributed is about $750,000 annually. This table shows the different parts of the globe to which our pension vouchers are sent.

	No.	Am't rec'd annually
Canada	2,657	$397,000
Germany	600	86,000

In the United States about 86 per cent. of the total number of concerns failing had $5,000 capital or less and 7 per cent. had from $5,000 to $20,000 capital).

BRADSTREET'S
ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers and public men. It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES, SINGLE INSERTIONS, DISPLAYED, 25 CENTS A LINE, AGATE MEASURE.

The Bradstreet Press,
Printing and Bookbinding,
49 Lafayette Street.

SPECIAL NOTICES

"A little leak will sink a ship."

It is the little things that count. Bradstreet's list of failures show it is not the colossal breaks, but the little leaks that sink the ship.

The matter of ink may seem trivial, but if you are not getting the best possible results you have a leak.

PLUG IT. SAVE THE SHIP.

Use Carter's Ink.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JULY 13, 1907.

A rather singular situation is disclosed to the newspaper reader at the present juncture. The announced intention of the naval authorities to send the Atlantic fleet on a cruise to the Pacific, a movement which under ordinary circumstances would scarcely attract more than passing interest, has given rise to a flood of discussion, not only in the domestic press, but in foreign journals, as to the possibility of a war at some time in the future between Japan and the United States. These discussions and prognostications appear to find no support in any expressions emanating from responsible authorities. The Japanese naval officials appear to unite in declaring that the matter of the sending of the fleet is purely an American affair. This is the view expressed, for example, by Admiral Yamamoto, who with the Japanese ambassador, Aoki, lunched with the President at Oyster Bay yesterday. Emphatic denials have also been made by both the Japanese embassy at Washington and the State Department of reports coming from as far away as The Hague as to "categorical" demands having been made by Japan upon the government of the United States. It is true that certain questions have been raised as to the treatment of Japanese residents in San Francisco, but as far as can be learned those questions are to be submitted to the courts and determined in an orderly way. They certainly cannot be regarded as affording any ground for hostilities between two nations connected as Japan and the United States have been by long standing ties of friendship.

Opinion in financial circles is still somewhat divided as to the continuance of the gold-export movement from this country to Europe. The strength of the foreign exchange market at New York early in the present week, and the resumption of specie shipments in the form of the engagement of $1,750,000 for Paris on last Monday, seemed to show that the foreign banks were still anxious to increase their reserves, and that the completion of the half-yearly payments had not cleared the situation entirely. Later on, however, the action of the money market on this side—interest rates having shown a decided disposition to harden—occasioned a rather sharp decline in exchange, and for the moment at least ends the ability of bankers to ship specie. Concurrently with this came the news that both at London and Paris there is a better feeling in regard to the monetary outlook, the indications being that whatever difficulties may have existed have been arranged without serious trouble. At the same time the foreign financial position is not a satisfactory one. The low prices of consols and of practically all gilt-edge securities bears witness to the strain on capital, while, as is the case with the American market, the banks and institutions of the old world are loaded up with a mass of undigested securities which cannot be distributed and which it would be impracticable to liquidate without severe loss. It is this last feature of the position which has been largely responsible for the conservatism of the great foreign banks and their efforts to augment their gold reserves at any cost.

To all appearance some time must elapse before the United States and France reach an agreement in relation to tariff matters. The proposals brought by Ambassador Jusserand to his home government are, as we learn from Paris advices, being considered carefully there, but seemingly with little disposition to make haste in accepting them. The view appears to prevail in French government circles that the tariff concessions offered by the United States are not in proportion to those demanded. The officials seem to hold the view that the proposed reduction of duty on champagne will not result in a very substantial increase in the importations, while the reductions asked of France are, in their opinion, important and of a nature to affect sensibly certain of the industries of France. There is some talk, indeed, of the continuance of the minimum duty on Porto Rican coffee as offering a fair equivalent to the reduction on French wines. This feature of the situation becomes of some consequence just now owing to the fact that the decree suspending the collection of the maximum rate on coffee from Porto Rico will, unless its operation be extended, expire on August 1 next, though it may be remarked that at Washington the resumption of the maximum duty at that time is not regarded as likely. It is not unlikely that an effort may be made to arrive at a settlement through the work of a joint tariff commission, as was done in the case of Germany.

In view of the likelihood of more or less extensive litigation over the recently enacted two-cent-fare laws, two decisions rendered by Judge Pritchard, one in the United States Circuit Court at Asheville, N. C., in a case involving the right of officers of a state to enforce a law fixing a maximum fare of two and one-half cents a mile, and the other in the United States Circuit Court of Appeals at Richmond, Va., in a case involving the enforcement of the two-cent passenger rate adopted by the State Corporation Commission of Virginia, are of interest. In the first case Judge Pritchard did not undertake to pass on the constitutionality of the law, but he held that the suit was not one against the state within the meaning of the eleventh amendment, to which the jurisdiction of the United States does not extend under the Constitution, but was one against the defendants as officers charged by the law of North Carolina with the administration and enforcement of the act in question. While continuing an injunction until the main question at issue is decided, Judge Pritchard ordered the railroads to file a bond sufficient to indemnify passengers and shippers for the differences between the new rates and the old rates. In the second case mentioned, in which a number of railroads were concerned, the court took a substantially similar view, continuing a restraining order until the final hearing, and holding that in fixing the rates involved the Corporation Commission was exercising a legislative function and not acting as a court, and that the court, therefore, had jurisdiction. The decisions will be brought ultimately for review to the Supreme Court of the United States.

The decision of the leaders of The Hague Conference to limit the time within which new propositions can be brought forward has resulted in the submission of a number of additional proposals. One of the most important was the American proposal regarding a permanent court of arbitration at The Hague, to which reference is made in another column. A modification of the American proposal touching the immunity of private property at sea in time of war was submitted by a Brazilian delegate, who suggested that the rules regulating the status of private property on land be extended to naval warfare, with the addition that when the commander of a belligerent fleet is obliged by the necessities of war to seize and destroy a merchantman belonging to the enemy, he must deliver to her captain a written statement enabling him to put in a claim for indemnity. The Argentine delegation declared strongly against the proposition of the United States. The discussion thus far had upon the subject indicates that the Netherlands, Austria, Norway and Greece favor the proposition of the United States; that Portugal, Italy, France, Germany and Russia would favor immunity under conditions, while Great Britain holds aloof and the Latin-American republics generally oppose the doctrine.

An effort to limit the destructive effects of bombardments is made in a series of regulations, based largely upon American views, which has been submitted in the name of the United States, Spanish, Dutch, Russian and Italian delegations. These regulations, which thus go before the conference with an unusually strong support, provide that the commander of a fleet must spare historical monuments, churches, hospitals and buildings used for artistic, scientific or benevolent purposes, on the condition that they are not used for military purposes and are designated by special signs, which must be displayed by the inhabitants, and that before beginning bombardment the commander must do all in his power to inform the authorities of towns of his intention. The bombardment of undefended places or buildings is forbidden, except as regards existing military works which the authorities refuse to destroy, and except where they refuse to furnish a fleet with necessary provisions. The bombardment of towns for refusal to pay ransom is, however, prohibited, and in any event, even in the case of a town taken by assault, pillage is forbidden. Another regulation intended to alleviate the horrors of war has been brought forward by the American delegation in the proposal to prohibit the use of explosive bullets.

It was a remarkable and from obvious points of view a humiliating spectacle that was presented in the San Francisco courtroom, where on Monday last the mayor of the city, after being found guilty of extortion, was sentenced to confinement in the state prison at San Quentin for a term of five years. The incident brought into high relief a condition of affairs which has been deplored by good citizens everywhere, and in an especial way by those whom local ties render jealous of the fair name of San Francisco. It is to be hoped that, as in the case of other localities that have suffered from the misdoing of public officials, and in which civic spirit has risen superior to untoward conditions, the City of the Golden Gate may henceforth be enabled through the efforts of its own courageous and vigilant citizens to fulfill its destiny unimpeded by obstacles arising from administrative incapacity or unfaithfulness.

SUSTAINED STRENGTH OF MID-SUMMER PRICES.

Perhaps the most notable feature of the July price exhibit is the sustained strength shown in the quotations of most commodities. This is illustrated by the large number of commodities—more than half of all contained in BRADSTREET'S compilation—which show no change at all for a month past, and also by the fact that while diverse movements have been shown by the other staples, the net change for the month is a slight gain in the general index number as of July 1 as compared with June 1 this year. Thus the index number on July 1 was $9.0404, a gain of half of 1 per cent. over the revised index number on June 1, a decrease of only nine-tenths of 1 per cent. from the record index number of recent years touched on March 1, 1907, a gain of 9 per cent. over the index number on July 1 a year ago, an increase of 14 per cent. over July 1, 1905, and of 18 per cent. as compared with July 1, 1904. Compared with the low record touched on July 1, 1896, the present level of all prices shows a gain of 58 per cent., while the increase over the high level touched on January 1, 1892, is 11 per cent. Fluctuations in the price level in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Dec. 1, 1905	$8.3014
July 1, 1896	5.7019	Jan. 1, 1906	8.3289
Jan 1, 1897	6.1164	Feb. 1, 1906	8.2415
July 1, 1897	5.8537	Mar. 1, 1906	8.2321
Feb. 1, 1900	8.2307	April 1, 1906	8.2987
June 1, 1901	7.4181	May 1, 1906	8.3054
Dec. 1, 1902	8.1413	June 1, 1906	8.3203
Aug. 1, 1903	7.7473	July 1, 1906	8.2835
Feb. 1, 1904	8.0073	Aug. 1, 1906	8.3379
July 1, 1904	7.6318	Sept. 1, 1906	8.4528
Jan. 1, 1905	8.0827	Oct. 1, 1906	8.5580
Feb. 1, 1905	8.0805	Nov. 1, 1906	8.7509
Mar. 1, 1905	8.0976	Dec. 1, 1906	8.9023
April 1, 1905	7.9996	Jan. 1, 1907	8.9172
May 1, 1905	7.9700	Feb. 1, 1907	8.9953
June 1, 1905	7.9073	Mar. 1, 1907	9.1293
July 1, 1905	7.9160	April 1, 1907	8.9640
Aug. 1, 1905	8.1111	May 1, 1907	8.9356
Sept. 1, 1905	8.2795	June 1, 1907	8.9901
Oct. 1, 1905	8.2298	July 1, 1907	9.0404
Nov. 1, 1905	8.2097		

A notable development of the June price movement was the strength shown in textiles, particularly cotton and cotton goods, a reflection as much of poor crop reports as of great activity in demand for goods. Print cloths and cotton sheetings reached new high levels, and among other textiles Australian wool and hemp also advanced. Fresh and dried fruits made a notable gain, while among the decreases might be mentioned breadstuffs, due to better crop reports; provisions, owing to seasonable influences, and oils and naval stores. Another feature was the fact that four groups—live stock, hides and leather, building materials and drugs—stood unchanged for the month.

The net result of the various movements during the month is best illustrated by the following table giving the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*July* 1, 1906	*Mar.* 1, 1907	*June* 1, 1907	*July* 1, 1907
Breadstuffs	$0.0524	$0.0830	$0.0817	$0.0935	$0.0922
Live stock	.1855	.3195	.3315	.3325	.3325
Provisions	1.3619	1.8466	2.1049	1.9343	1.9107
Fruits	.1210	.1670	.2003	.1957	.2158
Hides and leather	.8250	1.1500	1.1975	1.2000	1.2000
Textiles	1.5799	2.5086	2.7369	2.7581	2.8276
Metals	.3757	.7332	.8466	.8393	.8442
Coal and coke	.0048	.0067	.0080	.0073	.0068
Oils	.2082	.2964	.3428	.3900	.3877
Naval stores	.0402	.0940	.1170	.0990	.0970
Building materials	.0716	.0910	.0906	.0871	.0871
Chem. and drugs	.6607	.7083	.7083	.7141	.7141
Miscellaneous	.2150	.2692	.3632	.3392	.3447
Total	5.7019	8.2835	9.1293	8.9901	

The movement in detail for the month of June is shown in the following table:

JULY 1, 1907, COMPARED WITH JUNE 1, 1907.

INCREASES.

Flour	Cotton	Anthracite coal
Beeves, live	Wool, Australian	Connellsville coke
Pork	Hemp	Petroleum, refined
Rice	Print cloths	Tar
Peas	Cotton sheetings, southern	Tobacco
Apples		Ground bone
Lemons	Pig iron, southern	Hay
Currants	Tin	

DECREASES.

Wheat	Lard	Bituminous coal
Corn	Beans	Southern coke
Oats	Potatoes	Cotton-seed oil
Barley	Jute	Rosin
Sheep, live	Silk	Turpentine
Hogs, live	Pig iron, eastern	Quinine
Hogs, carcasses	Pig iron, Bessemer	Rubber
Mutton, carcasses	Copper	Opium
Bacon	Lead	

UNCHANGED.

Rye	Hides	Brick
Horses	Hemlock leather	Lime
Beef, carcasses	Union leather	Glass
Milk	Oak leather	Nails
Eggs	Wool, O. and Pa.	Yellow pine
Bread	Flax	Spruce timber
Beef	Standard sheetings	Hemlock timber
Hams	Ginghams	Alum
Butter	Iron ore	Bicarbonate soda
Cheese	Steel billets	Borax
Mackerel	Steel rails	Carbolic acid
Codfish	Tinplates	Caustic soda
Coffee	Steel beams	Nitric acid
Sugar	Silver	Sulphuric acid
Tea	Quicksilver	Phosphate rock
Molasses	Petroleum, crude	Alcohol
Salt	Linseed oil	Hops
Peanuts	Castor oil	Paper
Raisins	Olive oil	Cotton seed

In all, twenty-two staples advanced, while twenty-six declined and fifty-seven were unchanged. Compared with July 1 a year ago, the following changes are shown:

JULY 1, 1907, COMPARED WITH JULY 1, 1906.

INCREASES.

Wheat	Lemons	Silver
Corn	Raisins	Copper
Oats	Currants	Tin
Barley	Union leather	Bituminous coal
Flour	Oak leather	Southern coke
Beeves, live	Cotton	Petroleum, crude
Sheep, live	Wool, O. and Pa.	Petroleum, refined
Horses	Wool, Australian	Linseed oil
Beef, carcasses	Silk	Cotton-seed oil
Milk	Flax	Castor oil
Beef	Print cloths	Olive oil
Pork	Standard sheetings	Rosin
Butter	Ginghams	Tar
Cheese	Cotton sheetings, southern	Nails
Codfish		Alcohol
Sugar	Iron ore	Opium
Molasses	Pig iron, eastern	Hops
Salt	Pig iron, southern	Tobacco
Rice	Pig iron, Bessemer	Paper
Peas	Steel billets	Hay
Apples	Tinplates	Cotton seed
Peanuts		

DECREASES.

Hogs, live	Beans	Lime
Hogs, carcasses	Potatoes	Glass
Mutton, carcasses	Hemp	Yellow pine
Eggs	Jute	Spruce timber
Bacon	Quicksilver	Quinine
Mackerel	Connellsville coke	Rubber
Coffee	Brick	Ground bone

UNCHANGED.

Rye	Steel rails	Bicarbonate soda
Bread	Steel beams	Borax
Hams	Lead	Carbolic acid
Lard	Anthracite coal	Caustic soda
Tea	Turpentine	Nitric acid
Hides	Hemlock timber	Sulphuric acid
Hemlock leather	Alum	Phosphate rock

Here, it will be seen, sixty-three products are higher, while twenty-one are lower and twenty-one are unchanged, as compared with a year ago.

A PERMANENT COURT OF ARBITRATION.

While there has been much general discussion at The Hague of the project of establishing a permanent court of arbitration, the first definitely formulated plan thus far proposed is that submitted by the delegates from the United States to the sub-committee on arbitration and commissions of inquiry on Monday. This plan proposes that there shall be established a permanent court of arbitration to be composed of fifteen judges enjoying the highest moral consideration and of acknowledged competence in questions of international law. It is provided that the first judges and their successors shall be appointed according to rules established by the conference, but that they shall be chosen by the different countries in order that the varying systems of law and procedure in the principal languages of the world will be suitably represented in the personnel of the court. The number of years for which they are to be appointed is left to be determined, but it is provided that members of the court shall hold office until their successors are appointed.

It is provided that the court shall sit at The Hague, shall elect its own officers and, except so far as otherwise prescribed in the constituting convention, shall establish its own rules; that all decisions are to be by a majority vote, and that nine members shall compose a quorum. The judges are to be of equal rank, are to enjoy diplomatic immunity, and to receive a sufficient appanage to put them into a position to devote themselves to the affairs brought before them. Members of the court are to be competent to act as judges in any commission of inquiry or special arbitration tribunal which may be constituted by any power for the consideration of any matter that may be specially submitted and which must be determined by such court, but in no case, unless the parties expressly consent thereto, is a judge to participate in the consideration or decision of a matter brought before the court in which his own country is concerned.

Speaking generally, the permanent court is to have competence to take cognizance of and determine all cases regarding differences of an international character between sovereign states which cannot be settled by diplomacy. Such cases are to be submitted according to agreement among the parties either concerning their origin, or to be reconsidered or revised, or to determine the relative rights and duties or obligations arising out of decrees, decisions or sentences of commissions of inquiry and arbitration tribunals especially constituted. It is provided that the present permanent court of arbitration may so far as possible contribute to the formation of the basis of the new court, taking into account the representation of the powers which recently signed the convention of 1899.

Touching the general matter of the submission of disputes to arbitration, the United States delegates have submitted a proposal providing that differences regarding the interpretation of treaties not affecting the independence or honor of the parties involved or the interests of other states may be submitted to the permanent court of arbitration. Each party is to decide whether the differences affect its independence or honor, and in every case arising the parties are to draft a protocol outlining the powers of the arbiters and the procedure. Provision is made for keeping the records of the court of arbitration and for the withdrawal from the convention by a state after giving a year's notice of its intention to do so.

The proposals submitted by the delegates from the United States constitute, as has been said, the first definite formulation of a plan for the constitution of a permanent court of arbitration. The existing arrangement is of a rather indefinite character. Under the convention of 1899 each signatory power was entitled to select not more than four persons of recognized competence in questions of international law, enjoying the highest moral reputation and disposed to accept the duties of arbitrators. It was provided that the persons thus selected should be enrolled as members of a court upon a list which should be communicated by the International Bureau to all the signatory powers, and that two or more powers might unite in the selection of one or more members of the court. From the general list of the members thus selected the arbitrators chosen to determine any dispute are to be selected either by special agreement of the parties or by a general rule empowering each party to name two arbitrators, and these together to choose an umpire; or in case of their failure to agree upon an umpire, he is to be chosen by a third power chosen by the two parties; or, failing that, by two different powers chosen by the parties and acting jointly. Under the existing plan, therefore, arbitrations are conducted by specially selected but shifting committees of the general court. The plan proposed by the United States would substitute a continuing body with a larger membership which would constitute as regards its personnel a really permanent body. Whether the establishment of such a tribunal will be regarded as practicable by the conference remains, of course, to be seen. The plan has, however, the merit of definiteness and of affording a profitable basis for discussion, and to that extent, at least, it is deserving of the careful consideration of the conference.

INCREASED RAILWAY GROSS EARNINGS.

While this or that class of railway tonnage may tend to decrease, the one gratifying fact is that the general movement of freight is still of goodly proportions. Cars are more plentiful, traffic is moved with greater dispatch, and the cost of transportation, aside from the item of labor, is probably not so large. Therefore continued gains in gross earnings are simply in line with anticipations. Thus the latest figures available, those for June, show that the gross earnings of railroads operating over 93,500 miles amounted in that month to $82,056,350, the gain over June, 1906, being $9,700,423, or 13.4 per cent., which is an excellent outturn, considering the fact that gross earnings in the month last year showed a gain of 13.3 per cent. It should be remembered, however, that some of the roads—those largely identified with the bituminous coal trade—are now making comparisons with a troubled period last year when traffic receipts were reduced considerably by a strike of soft-coal miners. In any event the contrasts, whether they be with June, 1906, or the first half of the year or the entire fiscal year, all favor the periods recently ended. Of course it is too early to give complete returns for the first six months of 1907 or for the full fiscal year 1906-07. However, there are sufficient data available to show that gross receipts increased for each period something over 9 per cent. as compared with the first half of 1906 or the fiscal year 1905-06. Considering the fiscal year only, it may be said that the twelve-month was characterized by a streak of fat and a streak of lean. Thus, from July down to and including October, 1906, the increases were of heavy proportions, but in the interval between November of last year and February of the current year a wavering tendency was apparent, due largely to adverse weather conditions. Thereafter, however, continued improvement was the feature. The full extent of

the betterment, particularly as regards net revenue, the main factor, will not be known for a month or so hence.

This table gives the returns for June, 1907 and 1906, with the ratio of increase shown by each group.

	1907	1906	*Inc.*
Northwestern	$9,083,682	$7,845,998	15.7
Central-western	15,211,924	13,505,366	12.6
Trunk lines	19,501,815	17,731,517	9.9
Southern	13,198,458	12,056,489	9.4
Southwestern	9,973,650	8,596,433	16.0
Pacific	15,086,821	12,620,124	19.5
Total	82,056,350	72,355,927	13.4

Gains are large in each case, the heaviest being 19.5 per cent. reported by the Pacific roads, while the next largest is that of 16 per cent. returned by the southwestern lines, while the northwestern roads are third with an increase of 15.7 per cent. The central-western lines furnish an advance of 12.6 per cent., the trunk lines one of 9.9 per cent. and the southern roads 9.4 per cent.

The fluctuations in gross earnings for a series of years are set forth in the following exhibit:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	8.0	9.5	10.3	.05	14.5	6.7	7.4
April	16.0	11.7	8.7	4.5	14.3	11.2	8.9
May	15.1	14.7	9.5	3.5	12.0	9.0	9.2
June	13.4	13.3	6.3	.6	14.1	8.1	6.8
July	..	14.1	7.4	1.4	12.3	7.5	13.3
August	..	13.1	5.1	*3.4	9.4	4.6	13.2
September	..	9.3	6.3	*4.0	7.9	9.6	10.5
October	..	11.2	5.9	*4.0	5.5	6.6	11.8
November	..	4.6	9.1	*9.9	4.0	7.2	12.1
December	..	5.7	9.9	*8.0	4.6	9.4	5.5
Year	..	12.7	5.9	*1.4	11.5	8.0	10.5

* Increase. † Decrease.

Many of the individual roads report large gains over June, 1906, as the following list of increases in excess of $75,000 shows:

New York Central	$1,034,615
Northern Pacific	886,697
Great Northern system	537,653
Missouri, Kansas & Texas	493,680
Illinois Central	429,423
Buffalo, Rochester & Pittsburgh	370,466
Southern	354,705
Canada Northern	351,000
Louisville & Nashville	344,509
Missouri Pacific	342,000
Canadian Pacific	320,000
Cleveland, Cincinnati, Chicago & St. Louis	284,053
Grand Trunk	269,260
Denver & Rio Grande	260,000
Lake Shore & Michigan Southern	233,805
Texas & Pacific	232,623
Michigan Central	202,682
Wheeling & Lake Erie	193,681
Minneapolis, St. Paul & Sault Ste. Marie	178,053
Western Maryland	162,585
Wabash	162,502
St. Louis Southwestern	118,632
Colorado & Southern	111,076
Mobile & Ohio	101,532
Iowa Central	86,831
Chicago, Indiana & Southern	85,440

Returns for identical roads for the full fiscal year are given in the appended table:

	1906-07	1905-06	*Increase*	*P. ct.*
July	$80,800,673	$70,805,720	$9,994,953	14.1
August	78,771,383	69,593,637	9,177,746	13.1
September	79,270,463	72,521,836	6,748,627	9.3
October	86,650,834	77,911,337	8,739,497	11.2
November	86,842,493	82,983,127	3,859,366	4.6
December	83,007,364	78,548,032	4,459,332	5.7
January	69,009,545	68,272,841	1,636,704	2.4
February	61,847,147	60,613,077	1,234,070	2.0
March	76,623,443	70,915,286	5,708,157	8.0
April	79,282,674	68,316,988	10,965,686	16.0
May	82,728,103	71,898,426	10,829,677	15.1
June	82,056,350	72,355,927	9,700,423	13.4
Twelve mos.	947,790,472	864,736,234	83,054,238	9.6

It will be seen that gross earnings thus far reported for the full fiscal year aggregate $947,790,472, the gain over the preceding year being $83,054,238, or 9.6 per cent. The mileage represented is in excess of 93,500 miles.

SMALLER CEREAL CROP YIELDS PROMISED.

The July 1 report of the Department of Agriculture on cereal crop conditions, like its recent predecessor, the cotton report, proved a disappointment to the trades concerned. In each instance the improvement expected as the result of favorable weather in the preceding month either failed to materialize at all, as in the case of spring wheat and oats, or, if any gain was shown, the improvement was pared down, as in the case of winter wheat and cotton, to trifling proportions. One possible conclusion is that in crops as a whole the government condition reports of a month previous had been keyed too high, and that the later information, based naturally upon fuller information, showed a poorer condition than earlier supposed. Another view is, of course, that the government reports reflect, perhaps unconsciously, the tendency toward underestimation usual among producers of staple crops. In the following table will be found the condition figures of leading crops on July 1, 1907, as compared with other periods of this and preceding years:

	July 1, 1907	*June* 1, 1907	*July* 1, 1906	*July* 1, 1905	*10-yr av'ge*
Winter wheat	78.3	77.4	85.6	82.7	80.4
Spring wheat	87.2	88.7	91.4	91.0	88.0
Combined wheat	81.6	..	87 8	85.8	..
Corn	80.2	..	87.5	87.3	85.9
Oats	81.0	81.6	84.0	92.1	88.2
Barley	84.4	84.9	92.5	91.5	88.7
Winter rye	89.7	..	91.3	92.7	90.9
Potatoes	90.2	..	91.5	91.2	91.3
Tobacco	81.3	..	86.7	87.4	..

Winter-wheat condition, it will be seen, gained only a fraction of 1 per cent. during June, while spring wheat and oats lost respectively 1.5 and 1.6 per cent. and barley one-half of 1 per cent. Compared with a year ago and with 1905 the condition of every crop is lower, the decline from a year ago ranging from 3 points in the case of oats, of the more important cereals, to 4.2 points in the case of spring wheat and 7.3 points in the case of winter wheat and corn. In the case of the latter cereal the area given—98,099,000 acres—is 1.4 per cent. larger than in 1906, reflecting the diversion of much land from winter wheat. The condition of potatoes is 1 per cent. below 1906, and that of tobacco is 6.1 per cent. below. In every case the condition this year is below the ten-year average.

Special interest, of course, attaches to the country's leading cereal product—corn—and here the outlook is certainly much below last year, though better than that of any year previous to 1905. The area in corn, the condition of the plant on July 1 and the possible yield compare with area and condition figures and actual yield in the six preceding years as follows:

	Area in acres	*Condition July* 1	*Final yield in bushels*
1907	98,099,000	80.2	*2,560,000,000
1906	96,737,581	87.5	2,927,416,091
1905	94,011,000	87.3	2,707,994,000
1904	92,231,581	86.0	2,467,480,000
1903	88,091,000	79.4	2,244,176,925
1902	94,043,000	87.5	2,523,648,312
1901	91,349,928	81.3	1,522,519,891

* Estimated.

The estimates of possible yield in 1907 compare with the actual outturn in 1906 and the record yields of the past as follows;

	Possible yields 1907	*Actual yields* 1906	*Record yields and years*	
Winter wheat	382,595,000	492,888,000	492,888,000	1906
Spring wheat	251,899,000	242,372,966	293,185,322	1899
Total wheat	634,494,000	735,260,966	748,460,218	1901
Corn	2,560,384,000	2,927,416,091	2,927,416,091	1906
Oats	973,072,000	964,904,522	987,842,704	1902
Barley	163,670,000	178,916,484	178,916,484	1906
Rye	33,800,000	33,374,833	33,630,592	1902
Total above cereals	4,365,420,000	4,839,872,896	....	..

Wheat, it will be seen, promises a yield fully 100,000,000 bushels below that of 1906 and 113,000,000 bushels below that of the record year 1901. Corn promises a yield 367,000,000 bushels below 1906, and to that extent below the record yield. Oats, owing to the increased area, is figured as likely to show a slight gain—8,000,000 bushels—over 1906, but 15,000,000 bushels below the record year 1902, and barley promises a yield 15,000,000 bushels below the record yield of 1906. The aggregate yields of the five cereal crops above enumerated are placed at 4,365,420,000 bushels, a total just about 10 per cent. smaller than in 1906. It will be seen, therefore, that, taken as a whole, the outlook is for smaller though perhaps not absolutely short crops.

HEAVY PRESENT BUT LIGHTER PROSPECTIVE WHEAT SUPPLIES.

The situation as to supplies of wheat on July 1 is an interesting one. The American visible stock is heavily in excess of a year ago, while that in Europe is slightly below that of 1906. As to old supplies, therefore, the situation is a rather bearish one. On the other hand, the new crop outlook is nowhere as good as a year ago, so an offset appears as to the future which will furnish the trade food for thought for months to come. The statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on July 1, 1907, compare with the same period of the three preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
July 1, 1907	63,685,000	1,865,000	65,550,000
July 1, 1906	32,531,000	2,586,000	35,117,000
July 1, 1905	18,139,000	839,000	18,978,000
July 1, 1904	18,930,000	1,657,000	20,657,000

The American and Canadian supply is found to have decreased 7,619,000 bushels, in June, as against a decrease of 8,579,000 bushels in June, 1906, 10,015,000 bushels in June, 1905, and 9,406,000 bushels in June, 1904. Just how the stocks are divided between this country and Canada appears in the following table:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,403,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	53,112,000	30,385,000	83,497,000
May 1	54,450,000	26,941,000	81,391,000
June 1	53,633,000	19,536,000	73,169,000
July 1	49,131,000	16,419,000	65,550,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,180,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	49,082,000	21,482,000	70,504,000
May 1	42,878,000	12,303,000	55,181,000
June 1	34,966,000	8,700,000	43,696,000
July 1	28,936,000	6,181,000	35,117,000

European stocks fell off quite sharply in June, the decrease being 11,200,000 bushels, as against a decline of 8,000,000 bushels a year ago and 2,200,000 bushels in 1905. The following figures show the American and European stocks of wheat on the first of each month since January 1, 1905, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7
June 1	73,1	43,7	29,0	82,5	82,7	82,4	155,6	126,4	111,3
July 1	65,5	35,1	19,0	71,3	74,7	80,2	136,8	109,8	99,2
August 1	....	43,1	20,9	....	65,3	72,1	....	108,4	93,0
Sept. 1	....	45,2	22,8	....	70,7	73,0	....	115,9	95,8
Oct. 1	....	64,6	38,6	....	83,2	80,2	....	147,8	118,8
Nov. 1	....	73,0	58,2	....	88,1	75,9	....	161,0	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

There is here shown a total visible supply in the United States, Canada and Europe on July 1 of 136,800,000 bushels, a decrease of 18,800,000 bushels from June 1, and comparing with a decrease in June a year ago of 16,600,000 bushels. The total supply is seen to be 27,000,000 bushels larger than a year ago on July 1, and 37,600,000 bushels larger than on July 1, 1905.

The situation as to invisible stocks is likewise one of enlarged supplies as compared with similar periods of recent years. The government report of July 1 shows that the stock in farmers' hands on that date was 7.5 per cent. of the entire crop, or 54,853,000 bushels. This compares with 46,053,000 bushels held in 1906, 24,257,000 bushels in 1905, 36,630,000 bushels in 1904, 42,500,000 bushels in 1903 and 52,440,000 bushels in 1902. The stock on the farm, therefore, is shown to be the heaviest held in eight years. In the following table will be found the farm supplies held at the close of the cereal year, with, in addition, the United States and Canadian visible supply as reported by BRADSTREET's on that date, the two making up approximately the total American stock of wheat, with comparisons for seven years preceding:

	Farmers' stocks Per ct.	*Bushels*	BRADSTREET'S *visible U. S. and Canada*	*Total American supply*
July 1, 1907	7.5	54,853,000	65,550,000	120,403,000
July 1, 1906	6.6	46,053,000	35,117,000	81,170,000
July 1, 1905	1.4	24,257,000	18,978,000	43,235,000
July 1, 1904	5.7	36,630,000	20,657,000	57,287,000
July 1, 1903	6.3	42,500,000	25,917,000	68,417,000
July 1, 1902	7.0	52,440,000	29,511,000	81,951,000
July 1, 1901	5.9	31,000,000	41,047,000	72,047,000
July 1, 1900	9.3	52,000,000	64,966,000	116,966,000

These figures point to a grand total visible and invisible stock of wheat held on July 1 of 120,403,000 bushels, the heaviest supply held in like positions for at least eight years past, and fully 39,000,000 bushels larger than was held on the same date a year ago. It is, in fact, necessary to go back to 1900 to find a stock anything like as large as that of this year's. This is the bearish side of the wheat question and applies strictly to the matter of old supplies. On the other hand, the indicated American crop the coming year is fully 100,000,000 bushels smaller, which more than offsets the excess of present supply. Additionally, it might be noted that there is likely to be a serious shortage in yields abroad, which will make necessary a further call upon reserves the world over. Altogether, therefore, the situation as to wheat supplies, present and prospective, is apparently one of considerable strength.

THE DECLINE IN COPPER.

At last the deadlock which has existed between consumers of copper and the larger sellers of the metal has been broken. It was fully set forth in these columns recently that while some of the smaller producers had been selling in a limited way at concessions from the prices quoted by the larger concerns, like the Calumet & Hecla, or the great selling agencies, such as Messrs. Phelps, Dodge & Co., of New York, and the United Metals Selling Company, which latter organization markets the output of the Amalgamated Copper Company, there had been no relaxation in the prices demanded by the latter. On the other hand, the consumers, who had stocked up as far back as last February, paying from 25 to 26 cents per pound for their supplies, continued to hold off in regard to providing for their requirements as to raw material from July onward. Slack demand for finished products, more particularly copper wire, was stated to have an influence in determining this attitude on the part of consumers, the result being an absence of actual sales, the situation in some respects resembling the attitude of producers and consumers respectively in 1901-02, before the metal experienced its decline from 17 cents to 11 cents per pound.

This week, however, brings the long-expected break in the prices of the leading producers and agencies, and with it there has been large purchasing, amounting to many millions of pounds, with deliveries extending to as late as October next. The first intimation of the movemont was in the form of an announcement from Boston that the Calumet & Hecla Mining Company had made a sale of lake copper at 23 cents per pound, as against a quotation of 25½ cents, which had been previously adhered to. This was followed by the news on last Tuesday that the United Metals Selling Company had marked its quotation for electrolytic from 25¼ cents to 22¼ cents, and that lake copper had been put upon a 23-cent basis. Further concessions, however, were made by Phelps, Dodge & Co., one of the most important of the independent sellers of the metal, their figures being 22 cents for electrolytic. As was entirely natural, the London market for copper broke severely, the spot article falling £2 per ton, to £98 10s., while transactions in futures in that market had a correspondingly severe fall.

In commenting upon these occurrences some leading representatives of the copper trade apparently assume a rather cheerful attitude. A member of a leading selling firm is quoted as stating that "for the last two months we have been doing practically no business. Buyers have been unwilling to make new commitments on the old basis, and we finally decided to make a radical reduction in price, reducing it accordingly from 25 cents to 22 cents. We have held off from making this reduction for a long time, so as to enable consumers who had bought the metal at 25 cents per pound to use up their supply. The reduction to 22 cents, we believe, will represent the bottom level. It is, of course, impossible to say positively that the price will not go lower, but from all indications the outlook seems to favor an advance within the next month or two, rather than a further decline. Since the reduction in price was made we have received large orders for the metal on the new price basis. We believe this means a breaking of the deadlock and resumption of business on quite a large scale." On the other hand, there are predictions that this week's reduction was only the beginning of further declines which may carry the price of copper below 20 cents per pound, and should there be any further curtailment of demand, might perhaps bring it to as low as 15 cents. Furthermore, certain important consumers are represented as being dissatisfied with the present reductions, which they consider to be, in fact, inadequate.

A MEXICAN RAILROAD MERGER.

Outlines of the plan whereby the government of Mexico, in addition to the control it already exercises over the National Railroad Company of Mexico, was to acquire a preponderating interest in the Mexican Central Railway and merge the two organizations, were made public some time ago. Within the past week, however, fuller details of the manner in which the scheme will be carried out have come from authentic sources. It is stated in dispatches from the City of Mexico that the title of the new corporation which will take over both the National Railroad of Mexico and the Mexican Central Railway Company will be the United National Railways of Mexico. While there may be modifications of the plan in certain respects, it is understood that the arrangements in this connection will be substantially as follows: The consolidated company will have a capital of about $460,000,000 in Mexican currency, or the equivalent of $230,000,000 in gold. The shares to rest in the hands of the public are to be divided into $30,000,000 of first preferred stock, $125,000,000 of second preferred and $75,000,000 of common. There is some uncertainty as to the terms on which the outstanding stocks of the existing companies are to be exchanged for stock in the new corporation, but it seems that the National Railroad of Mexico first preferred is to receive an equal amount of the new first preferred, and that the Mexican Central first income bonds are to be converted into new common stock at 110, while the common stock of the Mexican Central will be converted into new common. The leading feature of the plan, which is altogether in line with the policy pursued by the Mexican government when it acquired control of the National Railroad of Mexico, is to retain in its own hands a majority interest in the stock of the new corporation, but at the same time to allow the actual management to remain in the hands of the minority stockholders, retaining, however, a supervisory attitude as to the manner in which the finances and actual workings of the property are conducted.

Through the new company the Mexican government will control over 10,000 miles of railway, comprising the most important lines in the republic. The two companies which it is proposed to merge in the manner indicated also have about 2,000 additional miles of road under construction or projected, which will be completed within the next three years. In view of the large increases which have been reported in the recent earnings of the different companies to be included in the amalgamation, it is asserted that the united organization will be able to earn within the next few years fully 6 per cent. upon its entire share capital, thus rendering the investment which the Mexican government is making a very profitable one. At the same time it is generally realized in financial circles both here and in Europe that the task of providing additional capital for the improvements and extensions which the railroads of Mexico will have to make in order to meet the requirements of the republic's growing trade and industry will be greatly facilitated by the arrangements which are now under way. American investors in the securities of the different Mexican railroad enterprises seem to favor the plans and methods of the government in connection with such matters, it being regarded as a very efficient solution of the problems involved.

DETROIT'S NOTEWORTHY EXPANSION.

Editor of BRADSTREET'S:

SIR—Detroit is known the country over as one of the most beautiful of American cities. It is not generally regarded as a great industrial center. As a matter of fact, it has, during the past few years, had the most rapid industrial expansion of any city of its class, including in this class cities with populations ranging from 350,000 to 500,000 inhabitants. Last January the Detroit Board of Commerce instituted a comparison of Detroit with its lower lake rivals, Buffalo and Cleveland. A few points of comparison were shown by percentages of growth compiled by that organization, which indicated that Detroit had outstripped the other two cities in ratios of gain in population, postal receipts, building construction, bank clearings, street-car traffic, value of manufacturing product, capital and hands employed and wages paid. Census statistics, 1890 to 1900, appear to have furnished some of the figures given, while locally compiled returns were the basis for other statistics in the compilation.

Statements for the first half of this year show that Detroit is surpassing even the remarkable record of 1906. In nothing is this more noticeable than in the banking interests. The consolidation of the two largest state banks was completed within the six months, giving a capital and surplus for the single institution of $3,000,000. Meantime a new national bank has been organized, and its proposed capital of $750,000 was oversubscribed the day the books were opened. Statements of the banks were made June 18, 1906, and May 20, 1907. A comparison of four of the leading items is as follows:

Nat. and State Banks.	*June 18, 1906.*	*May 20, 1907.*
Capital and surplus	$13,855,000	$16,811,000
Loans and discounts	50,252,537	61,957,743
Deposits	104,662,798	107,529,446
Total resources	133,825,284	139,858,613

The savings deposits in state banks increased in the same period from $51,436,596 to $54,265,791. The bank clearings for the first six months of 1906 were $324,729,147. In the same period this year they were $350,000,011.

Building operations are an unquestioned index of prosperity. The record for the six months, January to June, follows:

	Number	*Cost*
1906	2,303	$6,289,400
1907	2,678	7,313,100

Although Detroit is only tenth in population among the cities of the country, it was seventh in the extent of its building operations in March and April, and eighth in January and May. The aggregates are larger than those of Buffalo and about equal to those of Cleveland. The exports from the port of Detroit have had an extraordinary expansion. In April they were 21 per cent., in May 26 per cent. and in June 40 per cent. in excess of those for the corresponding months in 1906.

During the six months 108 new manufacturing corporations were established in Detroit, with about $5,000,000 of authorized capital; in the first six months of 1906 the figures were seventy-six companies with $4,379,500. Thirty-one old companies increased their capital $2,853,000 in the past six months; in the corresponding period last year twenty-seven companies added $2,661,000 to capital.

Post-office receipts, which are a good index of business growth, show an increase of about 17 per cent. over those of last year.

R.

EDITORIAL NOTES.

For a number of years the *Railway Age* has made it a practice to compile data on railway receiverships and foreclosures for semi-annual as well as annual periods. The latest report of this authority—that covering receiverships for the first six months of 1907—is a very favorable one, showing, as it does, that only five small roads, whose embarrassments began long before the present year, were forced into the hands of receivers. The total mileage involved is only 217 miles; the bonded indebtedness of the embarrassed roads aggregates $1,775,000, and the nominal capital stock is placed at $5,450,000. Comparing the record for the first half of 1907 with that for the first six months of 1906, it may be stated that the number of roads taken over by receivers was identical, while the mileage exceeded that of last year by thirty-three miles, but the capital involved was only about one-eighth of what it was in the corresponding period of last year. A list of the roads placed in the hands of receivers in the first half of 1907 follows:

	Miles	*Bonds*	*Capital stock*
Medford & Crater Lake	11	....	$200,000
Missouri River & Northwestern	35	$700,000	1,000,000
Northeast Texas	18	75,000	250,000
Chattanooga Southern	86	None	3,000,000
Colorado & Northwestern (3 ft.)	67	1,000,000	1,000,000
Total, five roads	217	1,775,000	5,450,000
Total bonds and stock			7,225,000

On the surface a receivership is a thing to be feared, but in connection with the foregoing five roads it may be said that proceedings for the appointment of receivers in most of the above instances was a preliminary step to reorganization, and in some cases to what may eventually prove to be a more prosperous career. Ever since 1900 the record as to foreclosures and receiverships has been quite clear, and, saving the Cincinnati, Hamilton & Dayton-Pere Marquette incident which came at the close of 1905, the railroads involved have been comparatively unimportant ones. During the half year six roads, operating 114 miles, bonded for $1,627,700 and capitalized at $7,500,000, were sold under foreclosure. The list is given in the subjoined table:

	Miles	*Bonds*	*Capital stock*
Peoria & Pekin Terminal	10	$977,000	$700,000
Dayton, Lebanon & Cincinnati	29	1,500,000	2,500,000
Houston, Brazos & Northern	4	.....	600,000
Traverse City, Leelanau & Manistique	29	300,000	500,000
Medford & Crater Lake	11	.....	200,000
Toledo Railway & Terminal	31	3,500,000	3,000,000
Total, six roads	114	6,277,000	7,500,000
Total bonds and stock			13,777,000

With the memory of New York City's failure to obtain bids at par for the full amount of its recent offering of $29,000,000 4 per cent. bonds still in the minds of the financial public, there is no surprise in that quarter that the offering for subscription of the new Union Pacific and Atchison bonds should have fallen flat. The $26,000,000 of new Atchison convertible bonds bear interest at the rate of 5 per cent., while the Union Pacific $75,000,000 issue is of 4 per cent. bonds. Not only have the "rights" or privileges which the companies in question offered to their stockholders been practically without any market, or nearly so, but it is understood that only a small amount of the new bonds has been subscribed for by the stockholders. It is to be remarked that the Union Pacific issue has been underwritten by a syndicate which, according to all accounts, will be obliged to take some $70,000,000 of the total amount, while, as the Atchison bonds were not underwritten, it is to be presumed that in the future the company in question, notwithstanding its high credit, may be obliged to sell about $17,000,000 remaining bonds of its issue in a private way. These developments, of course, emphasize the plethora of new securities and the absence of demand for the same.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Chattel Mortgage—Removal—Waiver.

The Supreme Court of Washington held, in the case of Jones vs. North Pacific Fish & Oil Company, that consent by a chattel mortgagee that the property mortgaged shall be taken out of the state in which the mortgage was given is a waiver of the mortgage as against every person except the mortgagor.

Waterworks Company's Liability.

The Supreme Court of Florida held, in the case of Mugge vs. Tampa Waterworks Company, that a taxpayer whose property is destroyed by fire on account of the negligence of a waterworks company in not furnishing water in accordance with its contract with the city, is entitled to recover damages from the company in an action of tort, where the company, by virtue of its contract, enjoys exclusive franchises and privileges and the proceeds of special taxes imposed for its benefit.

Insurance—Supposed Death—Settlement.

The Supreme Court of Iowa held, in the case of The New York Life Insurance Company vs. Chittenden et al., that where the insured under a life policy had been absent for over seven years and his whereabouts unknown, and the insurance company, rather than question his death, elected to pay the insurance to the persons entitled to receive it in case of his death, the compromise and settlement based on the assertion of his death were binding and conclusive on the company though it afterwards appeared that he was alive.

Employers' Liability—Street Railway.

The Supreme Court of Indiana held, in the case of The Indianapolis Street Railway Company vs. Kaus, that a decision that the employers' liab lity act was unconstitutional as to corporations other than railroads was not inconsistent with and did not change the rule previously declared by the court that it was not unconstitutional as to railroads, and that the question whether a street railroad company was a "railroad" or was an "other corporation" within the meaning of that act had never been decided by the court.

Carrier—Freight—Conversion.

The Court of Appeals of the District of Columbia held, in the case of Beasley vs. Baltimore & Philadelphia Railroad Company, that the refusal of a connecting carrier to surrender freight—at least after a reasonable time to ascertain facts—upon tender of the rate stipulated for in the carriage contract, which is in excess of its own portion of the through rate, because of a waybill in its possession calling for a larger sum, which is subsequently admitted to be a mistake, is a conversion for which trover will lie.

Railroad—Abutting Owner—Damages.

The Supreme Court of Indiana held, in the case of Kinsey vs. Union Traction Company, that the fact that a landowner had sold his property after bringing an action against a railroad for an injunction against further operation and for accrued damages did not require the dismissal of his pending appeal in such case so far as it involved the question of damages, and that an owner of lands abutting on a street along which an interurban railroad was operated on a street railroad track, carrying packages and express matter under a franchise duly granted by the city, was entitled to recover special damages for the injuries peculiar to himself as owner of such property, as distinguished from the general injury suffered by all abutting owners or by the public. Such operation, the court said, did not constitute an additional servitude upon that portion of his land lying in the street.

Irrigation—Stipulations—Damages.

In the case of Mathieu vs. North American Land & Timber Company, Limited, recently decided by the Supreme Court of Louisiana, it appeared that in a rice irrigation contract involved in the case, the defendant, an irrigating company, was made the sole judge as to when water should be furnished and in what quantities, and it was otherwise stipulated that it should not be liable for the failure to furnish water when such failure was caused by deficiency of water at its source of supply, accidents to machinery, injuries to canal, or other failures or accidents over which it had no control. The court held that the control vested in the defendant company was accompanied by a corresponding measure of liability, and was exercised at its peril, and that the allegation that having control of the water it failed to furnish the same, on proper demand, under the contract, and that the plaintiff thereby lost his crop, would disclose a cause of action, and if substantiated by proof, would entitle plaintiff to recover unless the defendant could show that its failure to furnish the water was attributable to one or more of the causes exempting it from liability in such case. The court further held that where an irrigation contract contains a stipulation that the contracting company "shall be entitled to a written notice of not less than ten days before water will be required on the premises," which is to be served on a particular officer, "and shall state as nearly as may be the number of acres to be irrigated at that time," no damages can be recovered for failure to furnish water in the absence of allegation and proof that the notice so required was given, unless it be satisfactorily shown that the inability of the company to furnish water was admitted.

Real Estate—Agent—Commission.

The Kentucky Court of Appeals held, in the case of Pope vs. Caddell, that a contract made in writing by an owner of real and personal property authorizing his agent to sell such property at an agreed price and for an agreed commission was enforceable between the parties to the contract, and that the principal could not refuse to pay the commission of the agent who made the sale on the ground that the agent did not have a written contract of sale from the purchasers, who had agreed to purchase the property and who were willing, ready and able to pay the price agreed on.

Carrier—Agent—Delivery—Damages.

The Supreme Court of Georgia held, in the case of Goodin vs. Southern Railway Company, that where the agent of a terminal carrier at the station to which freight was carried demanded a sum as freight greater than that fixed in the bill of lading issued by the initial carrier, and in consequence of the consignee's refusal to pay more than the latter sum the shipment was not delivered for a period of ten days, the last carrier was liable in damages to the consignee on account of such delay, even though at the expiration of the time named the goods were delivered upon the payment of the amount of freight set out in the bill of lading, when it did not appear that the amount demanded by the terminal carrier's agent was in excess of the legal and proper charges according to the fixed and usual rates, or that there existed between the terminal carrier and the initial carrier contractual relations with reference to transportation charges.

Contract—Pavement—Royalty—Patent.

The Supreme Court of Louisiana held, in the recent case of Lacoste vs. City of New Orleans et al., that the fact that a pavement was patented was no obstacle to full and fair competition upon a municipal contract for the laying of it when the patentee had filed with the city authorities an agreement to let the successful competitor for the contract have the free use of the patent upon payment of a fixed royalty, thereby placing all prospective competitors upon an equal footing, it appearing that the royalty thus exacted was reasonable and did not destroy the margin of profit under the contract. The court further held that it was no answer to say that the patentee could underbid his competitors for the contract; that to him, as to the other bidders, the sole inducement for bidding on the contract was the margin of profit which he saw in it, and that for him, as for all others, this margin of profit began only after the royalty had been paid.

Carrier—Shipment—Delay—Conversion.

The Kentucky Court of Appeals held, in the case of The Chesapeake & Ohio Railway Company vs. Saulsberry, that a delay by the carrier in the shipment of a carload of corn from Ashland to Aden, a distance of thirty-three miles, from September 1 to October 2, was unreasonable and could not be excused on a plea of congestion, and that while the delay did not give the owner the right to refuse to receive it, yet after he did refuse to receive it, the carrier, after refusing to make any concessions to the owner on account of the delay, had no right to move it out of the state and sell it, such action amounting to a conversion. The court further held that the carrier had a lien on the corn for its freight, and that when the owner refused to accept it, it was, under section 785 of the Kentucky statutes, unclaimed freight, and that being perishable the carrier had the right, by giving the notice required by that section, to sell it within the state, but that the act of moving it and selling it outside of the state was a conversion for which the carrier became liable to the owner for the value of the corn less the freight.

BUSINESS NOTES.

Havana Cigar Makers' Strike.

The strike of the Havana cigar makers, which has been in operation for some time, affects business in that Cuban city. Upward of 80,000 to 100,000 persons are affected by the strike, and the wage loss approximates $200,000 weekly. The supply of some sizes and brands of cigars is practically exhausted. However, late reports indicate that the strike will be settled soon, the operatives receiving a 10 per cent. increase in Spanish gold. During the first two weeks of June, 1906, Cuba shipped to this country a little more than 2,000,000 cigars, against 188,225 this year. Her shipments to England for the same two weeks were respectively 4,298,157 and 186,700. Her shipments to all countries were last year 8,534,294 and this year 542,800. From January 1, 1906, to June 15, 1906, her shipments were 113,645,980, which compares with 64,439,990 this year. During the first two weeks of June last year shipments were made to thirty-one different countries, the normal distribution. During the corresponding term this year only ten countries appear on the Havana cigar export list.

The States in Manufacturing.

The current number of the Massachusetts *Labor Bulletin* contains an interesting exhibit of the position held by the state in the manufacturing industry of the United States at different times back to 1850. The basis of the comparison is the value of manufactured product as returned at the several census takings. The percentages of the total product held by those states which in 1905 produced over 2 per cent. of the total have been as follows in the census years mentioned:

	1905	1900	1890	1880	1850
New York	16.81	16.40	18.26	20.13	23.31
Pennsylvania	13.21	14.46	14.21	13.87	15.21
Illinois	9.53	9.82	9 70	7.73	1.62
Massachusetts	7.59	7.95	9.48	11.75	15.48
Ohio	6.49	6.56	6.85	6.49	6.15
New Jersey	5.23	4.85	3.78	4.74	3.91
Missouri	2.97	2.77	3.46	3.08	2.39
Michigan	2.90	2.80	2.97	2.81	1.10
Wisconsin	2.78	2.86	2.65	2.39	.91
Indiana	2.66	2.95	2.42	2.76	1.84
Connecticut	2.49	2.76	2.65	3.46	4.62
California	2.48	2.26	2.28	2.17	1.26
Minnesota	2.08	1.96	2.05	1.42	.01

Relatively to the total manufacturing of the country, all of the older northern states except New Jersey have lost ground since 1850, while the middle western states have gained, especially Illinois.

Fuel Consumed in Iron and Steel Industry.

The following table shows the quantity and cost of fuel used in the blast furnaces, steel works and rolling mills and forges and bloomeries in 1900 and 1905, by kinds:

			Cost
BLAST FURNACES.			
Anthracite coal and culm, tons	1905	560,637	$1,812,779
	1900	886,564	2,297,419
Bituminous coal and slack, tons	1905	801,640	1,340,997
	1900	832,235	1,101,312
Coke, tons	1905	19,739,676	57,127,027
	1900	16,401,533	38,976,770
Charcoal, bushels	1905	37,796,739	2,538,452
	1900	31,421,585	1,846,201
Oil used for fuel, barrels	1905	....	....
	1900	....	....
Natural gas	1905	....	83,087
	1900	....	....
STEEL WORKS AND ROLLING MILLS.			
Anthracite coal and culm, tons	1905	231,125	702,262
	1900	943,018	1,220,694
Bituminous coal and slack, tons	1905	7,054,099	14,365,633
	1900	10,944,046	14,679,804
Coke, tons	1905	638,747	2,009,295
	1900	926,516	2,014,390
Charcoal, bushels	1905	2,968,784	283,916
	1900	2,250,022	170,345
Oil used for fuel, barrels	1905	633,813	908,154
	1900	1,302,615	1,158,748
Natural gas	1905	....	4,382,667
	1900	....	3,098,409
FORGES AND BLOOMERIES.

	1900	67	240
Charcoal, bushels	1905	164,749	15,222
	1900	1,538,280	85,241

Post Office Money Orders.

Figures of the money-order department of the New York post office show that in the fiscal year ending June 30, 1907, the total business of the department amounted to $440,406,209, an increase of $89,069,292 from the previous year, or 25 7-10 per cent. This does not include the figures of the various sub-stations, with which the total for the whole city would be about $479,000,000. Domestic money orders were paid to the amount of $49,232,655, an increase of $7,246,115. Remittances from postmasters in the country amounted to $112,796,102, an increase from $96,608,733 of last year. There was a saving in the exchange on foreign postal business. Advantageous purchases of foreign exchange showed a profit of $482,674.87 in this item, the total amount of exchange purchased being $4,030,573, as against $3,045,515, an increase of $985,057. The total of money orders certified to foreign countries was $71,039,249, an increase of $17,531,732. The total number of separate money transactions handled by the division for the year was 9,261,883, covering the sum of $444,406,209, as compared with 8,480,518 and a total of $355,336,917 in the previous year.

A Half Year's Fire Loss.

The fire loss of the United States and Canada for the month of June, as compiled by the New York *Journal of Commerce and Commercial Bulletin*, shows a total of $14,765,000. This makes the aggregate for the half year $117,477,500. The following table gives a comparison by months of the losses this year, with 1905 and 1906:

	1905	1906	1907
January	$16,378,100	$17,723,800	$24,064,000
February	25,891,000	18,249,350	19,876,500
March	14,751,400	18,727,750	20,559,700
April	11,901,350	292,501,150	21,925,900
May	12,736,250	16,512,850	16,286,300
June	11,789,800	13,950,650	14,765,000
Total, six months	93,147,900	377,665,550	117,477,500
July	13,173,250	12,428,050	....
August	11,435,600	9,641,600	....
September	13,715,250	10,852,550	....
October	12,267,000	13,872,450	....
November	16,178,200	16,248,350	....
December	15,276,600	10,001,450	....
Total, twelve months	175,193,800	459,710,000	....

Anthracite Coal Shipments.

Anthracite coal shipments over the various coal roads in June amounted to 5,944,000 tons, an increase compared with June last year of 268,000 tons. In the six months of the year 1907 to date anthracite tonnage has been 32,884,000, a gain over the same period last year of 7,499,000 tons. The showings of the different roads compare as follows:

	June	*June*	*Year to date*	
	1907	1906	1907	1906
Lehigh Valley	1,030,996	990,482	5,582,314	4,317,788
Reading	1,300,330	1,194,309	6,751,398	5,154,323
Jersey Central	808,061	693,942	4,311,696	3,155,226
Del., Lack. & W	850,014	936,526	5,153,251	4,311,584
Delaware & Hudson	543,259	536,122	3,208,177	2,576,072
Pennsylvania	493,164	446,735	2,991,380	2,172,258
Erie	676,000	645,286	3,535,577	2,612,368
Ontario & Western	222,427	231,526	1,350,802	1,086,182
Total	5,944,260	5,676,018	32,884,595	25,385,801

The shipments by months for the first half of the year have been as follows:

	1907	1906	1905
January	5,749,946	5,458,084	4,408,578
February	4,563,720	4,712,099	3,922,601
March	5,235,814	5,797,167	5,258,567
April	5,916,583	488,203	5,278,041
May	5,999,272	3,254,230	6,005,158
June	5,924,260	5,676,018	5,844,052
Total	32,889,595	25,385,801	30,716,997

Commerce of Russia.

Consul Samuel Smith, of Moscow, furnishes the following statistics covering the foreign commerce of Russia in 1905 and 1906. The value of the foreign commerce of Russia for the past two calendar years was as follows:

	1905	1906	*Changes.*	
Imports	$279,657,500	$309,056,500	Inc.	$30,299,000
Exports	508,937,500	499,693,500	Dec.	9,244,000
Total	788,595,000	809,650,000	Inc.	21,055,000

The following statement from Russian sources shows the imports and exports of Russia into and from the several countries during the past two years, three figures being omitted:

	Imports		*Exports*	
	1905	1906	1905	1906
Germany	$117,667	$133,554	$127,056	$142,082
United Kingdom	48,588	52,440	124,603	112,710
United States	19,922	22,340	1,773	2,865
France	12,870	14,110	32,233	36,887
Austria-Hungary	9,810	10,478	22,830	22,711
China	9,814	9,041	....	....
Netherlands	6,136	6,531	63,401	53,056
Egypt	4,141	6,095	....	....
Italy	4,675	5,178	31,327	25,824
East Indies	4,727	4,596	....	....
Belgium	3,630	3,725	22,304	20,656
Turkey	2,879	3,330	7,552	7,264
Sweden	2,393	3,240	5,710	4,795
Norway	3,829	3,045	3,935	3,173
Finland	13,382	15,962	19,503	23,638
Denmark	....	....	11,690	15,383
Roumania	....	....	5,212	8,399
Spain	....	....	9,758	4,018
All other countries	14,892	16,278	19,447	15,327
Total	279,657	309,056	508,937	499,693

According to the Bureau of Manufactures, the figures given by the consul from Russian sources as to Russian exports to the United States are incorrect. The returns of the Bureau of Statistics show imports from Russia in 1906 to the value of $18,232,240.

CURRENT BUSINESS NEWS.

Commercial.

Estimates on the average yield per acre of winter wheat furnished to the *Modern Miller* by millers in the principal producing states show that by comparison with last year's yield and figured on the basis of the acreage to be harvested, as estimated by the government, the crop in Missouri and Michigan will be about the same as last year; Illinois, 8 per cent. larger; Nebraska, 10 per cent. smaller; Ohio, 20 per cent. smaller; Kansas, 25 per cent smaller. The Kansas crop is estimated at about 60,000,000 bushels. Oklahoma can spare a small amount for shipment out of the state. Texas must import for milling and seed requirements The movement will be two weeks later than usual, and a good deal will depend upon the price whether wheat will move freely or not.

According to the Duluth *Commercial Record*, the northwestern wheat crop has never before been in such a precarious condition on July 1. This authority looks for a crop of 145,000,000 bushels, against 170,000,000 bushels a year ago. This does not count durum, which was forty odd millions. Acreage is 15 per cent. short.

The Missouri state report makes July condition of corn 77, against 74 in June and 84 last year. The October condition was 90, and the crop last year was 233,000,000 bushels. The largest corn counties are better than a year ago. The usual acreage is planted. Oats condition is 76, against 75 last month and 52 last year, when the crop was 22,000,000. Wheat improved in June, and estimated yield per acre is 13½ bushels; the acreage is 2,160,000, with harvest two weeks late. A yield of 13½ bushels would indicate a crop of 29 160,000 bushels.

The Kentucky wheat condition is placed at 90; prospective yield 84 per cent. of last year, when the crop was 11,500,000 bushels, which would ndicate a crop of 9,960,000 bushels. The July corn condition is 79, against 77 last month and 92 last year, when the crop was 105,000,000. Acreage 95 per cent. Oats condition 72, against 79 in June and 75 a year ago, when crop was only 6,000,000.

Exports of Australia for the quarter ended March 31 increased nearly $19,000,000 for merchandise, while imports increased $7,568,278.

The secretary of the Iowa Grain Dealers' Association estimates that the corn crop will be 83,000,000 less than last year, when it was 388,000,000. Cold weather is responsible for the shrinkage. Oats have been injured 15 per cent. by green bug. Spring wheat is 1,000,000 bushels short.

The statistical report of lake commerce through the canals at Sault Ste. Marie, Mich., and Ontario for the month of June, 1907, compared with the corresponding period in 1906, shows considerable expansion, the east-bound movement reaching 7,033,626 net tons in June, 1907, as compared with 5,725,508 net tons in June, 1906, grain, flour and wheat forming the bulk of the increase, with iron ore a close second.

The semi-annual report of the H. B. Claflin Company, one of the largest wholesale mercantile houses in the country, shows there were net profits of $454,275 for the six months ended June 30, an increase of $102,016 over the same period in 1906. In his report President Claflin says: "Our sales booked for future delivery are larger now than at a corresponding date last year." Sears, Roebuck & Co., the great Chicago mail-order house, has issued a statement of gross sales for the six months ended June 30, which shows a marked decrease in business since April, though the total of business for the six months' period was $25,982,298, a gain of $1,457,100 over 1906. While the growth of business since the first of the year mounted consistently as compared with 1906 until April, the next month showed a falling off from the $4,632,630 total of 1906 amounting to $37,251. The recession in June compared with the same month in the previous year amounted to $253,563.

Mr. William Heimke, secretary of American legation at Bogota, telegraphs the Department of State, under date of July 1, that the government of Colombia has suspended the present tariff on the importation of corn until November 1, 1907.

The Wisconsin report makes condition of oats 93½, against 86½ in June; barley 94½, against 87; spring-wheat 88, against 83; winter wheat 80, against 80; winter rye 90, against 90; corn 72, no comparison.

The Iowa Crop Bureau's July report estimates corn condition 76 and oats 89 per cent. Same date last year, corn was 99 and oats 84.

Merchants in Vermont and western Massachusetts will be interested to know that the Merchants Association of New York has arranged for reduced fares to New York from all points in Vermont reached by the Rutland and the Delaware & Hudson railroads; in Massachusetts the Boston & Albany Railroad will make the special fare from all stations west of, but not including, Springfield, with the option of travelling to New York via the Chatham or Albany gateway. The rates will be in effect from August 17 to 21, inclusive, and from September 1 to 5, inclusive, with a return limit of fifteen days. Reduced rates covering the same dates have been arranged for in trunk line territory, but reductions will not be given to points less than one hundred miles from New York. Special arrangements for the periods from July 27 to 31, inclusive, and August 17 to 21, inclusive, have been made with the Central Passenger Association.

H. C. Frick is quoted as saying that he expected a slight recession in business, which would be beneficial to business in general. Basic conditions, according to Mr. Frick, are sound.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News*: United Kingdom—The outlook for the crops is unfavorable, owing to weather conditions. Germany and Belgium—The outlook is very unfavorable, and the crops are in urgent need of heat and sunshine. France—The crop outlook is very bad in the important regions. In the north and east the outlook is poor and will gradually deteriorate unless weather conditions become favorable. In the south, harvesting has commenced and a good yield is expected. Supplies are very small. Roumania—Reports confirm only half a crop of wheat. Corn is needing rain badly. Russia—In the southwest winter wheat and rye are in a very poor condition, while the outlook for the spring crops is fair. Elsewhere both winter and spring crops are fair to good. Harvesting has commenced in the southeast. Italy and northern Africa—Harvesting returns are satisfactory. Spain—Reports confirm considerable damage as a result of drought, and estimates of the yield are being lowered. Further mention is made of a reduction of the import duty. The barley crop is reported entirely lost.

The Michigan July report indicates that wheat has improved, prospects fourteen bushels to acre, against twelve last year; quality excellent; other crops improved by recent weather; nearly up to average. These figures indicate 12,292,000 bushels for the crop, against 11,853,000 indicated last month and 13,664,000 bushels official government last year.

This table, taken from legal papers filed by the federal government, gives the output of tobacco manufactures for the United States, as well as the quantity contributed by the American Tobacco Company:

	Total U.S.	*American Tobacco Co.*
Manufactured tobacco, plug and smoking (pounds)	363,000,000	282,000,000
Snuff (pounds)	23,660,000	22,500,000
Cigarettes	6,328,000,000	4,900,000,000
Small cigars	995,000,000	905,000,000
Cigars, stogies, etc	7,375,000,000	747,135,000

Germany has sent a commissioner to East Africa to study the prospects for cotton growing in that colony.

The following table shows for each of the states having 1,000,000 acres or upward in winter wheat the condition on July 1 of this year and of the two preceding years, and that on June 1, 1907, with the respective ten-year July averages:

	July 1, 1907	*June 1,* 1907	*July 1,* 1906	*July 1,* 1905	*10-yr av'ge*
Kansas	60	60	75	80	80
Indiana	80	78	90	95	72
Missouri	85	84	86	80	78
Ohio	80	80	89	90	76
Nebraska	84	80	87	92	87

The following table shows for each of the five principal spring-wheat states the condition on July 1 of this year and of the two preceding years, and that on June 1, 1907, with the respective ten-year July averages:

	July 1, 1907	*June 1,* 1907	*July 1,* 1906	*July 1,* 1905	*10-yr. av'ge*
Minnesota	85	86	89	87	87
North Dakota	88	90	93	92	86
South Dakota	89	90	91	91	88
Iowa	89	87	94	91	91
Washington	95	96	100	102	94
United States	87.2	88.7	91.4	91.0	87.0

Broomhall's Hungarian correspondent reports that wheat in the important regions of Hungary is badly damaged by heat and rust, while in some of the largest districts the crop is a complete failure. He estimates the crop decidedly lower, and places the possible yield at 109,600,000 bushels, compared with last year's final of 207,200,000 bushels. The crop is considered insufficient for home requirements.

Financial.

The French fiscal returns of the first six months of 1907 show that the indirect taxation through the tobacco monopoly and similar products has brought in about $21,000,000 over the budget estimate, and about $15,000,000 more than for the same period of 1906.

On July 5 George E. Roberts, director of the United States mint, was elected president of the Commercial National Bank of Chicago.

A special stockholders' meeting of the Chesapeake & Ohio Railway has been called for July 31 in Richmond, Va., to authorize an issue of $10,000,000 5 per cent. ten-year general equipment and improvement mortgage gold bonds.

The London *Bankers' Magazine* says that its representative list stocks showed a decline in June of about £68,000,000, the exact figures being as follows:

Aggregate value of 387 representative securities on May 21, 1907	£3,656,271,000
Aggregate value of 387 representative securities on June 20, 1907	3,588,277,000
Decrease	67,994,000

There were thirty-one of the fifty-three New York Clearing House banks reporting less than the 25 per cent. required reserve in last Saturday's statement, seventeen national and fourteen state. This compares with twenty-one banks below their reserve on June 29 and twenty-seven in the week of July 7 last year. The list of banks below the 25 per cent. reserve on last Saturday is as follows:

Bank Manhattan Co	23.4	East River National	23.2
Bank of America	24.3	Bowery	21.3
Phenix National	23.3	New York County Nat.	23.3
Merchants Exch. Nat.	23.5	German Exchange	24.6
Nat. Butchers & Drov.	20.7	Lincoln National	24.7
Merchants & Traders	23.5	Garfield National	24.0
Greenwich	22.7	Fifth National	23.1
Am. Exchange Nat.	24.0	Bank of Metropolis	23.1
Mercantile National	24.1	West Side	23.3
Pacific	20.3	Seaboard National	23.2
Chatham National	24.7	First Nat. Brooklyn	23.0
Nassau	23.0	Liberty National	24.4
Corn Exchange	24.7	New Amsterdam Nat.	23.3
Oriental	18.1	State Bank	24.6
Imp. & Traders Nat.	24.6	Fourteenth Street Bank	19.9
National Park	24.7		

At the close of business Tuesday the deposits in the Bowery Savings Bank reached a total of $100,000,000, a showing said to be unprecedented in the history of savings banks. According to President Wood, the increase in deposits in savings banks indicated the continuance of the great national prosperity and the subsidence of the suburban real-estate speculative fever.

In June the gross debt of Boston decreased from $102,184,256 to $101,857,756, but the net debt advanced from $69,034,555.76 on May 31, to $69,215,437.39 on June 30. The reduction in the gross debt was made possible by the paying off in June of $834,000 of debt. Of this amount, $833,000 was on account of ten-year city of Boston bonds, and $1,000 was on account of the water debt. On the other hand, the city issued $507,500 of new debt in June. Included in this month's statement of the gross debt is $120,000 of the $180,000 recently issued by the state under chapter 534 of the acts of last year, which sum is charged against Boston for the new court house extension.

The stock transfer tax collections for June aggregated $195,740, as against $424,071 for June, 1906. The collateral inheritance tax for fourteen counties reporting for June was $273,900, against $373,794 in the corresponding month last year.

Kuhn, Loeb & Co. announce that all of the $6,000,000 Westinghouse Electric & Manufacturing Company three-year 6 per cent. collateral notes have been sold.

A seat on the New York Stock Exchange sold Thursday for $73,000, a reduction of $2,000 from the previous sale.

Subjoined is a statement of the capital applications in Great Britain for each quarter since the beginning of 1903:

	1907	1906
First quarter	£49,428,600	£30,264,800
Second quarter	40,304,600	55,059,800
Third quarter	----	10,835,800
Fourth quarter	----	24,012,800
Total	89,733,200	120,173,200
	1905	1904
First quarter	67,301,200	19,905,000
Second quarter	36,915,500	50,654,000
Third quarter	22,854,100	9,547,000
Fourth quarter	40,116,600	42,913,000
Total	167,187,400	123,019,000

The British government did not figure at all as a borrower during the past half year.

Railroads.

On Thursday Judge McPherson, of the federal court at Des Moines, denied the application of two stockholders of the Iowa Central and the Minneapolis & St. Louis for an order restraining the directors of the roads from putting into effect the two-cent passenger rate enacted by the Iowa legislature.

Judge Pritchard, of the United States Circuit Court of Appeals at Richmond, in an opinion handed down Wednesday, continued the restraining order preventing the uniform two-cent passenger rate, as adopted by the Virginia State Corporation Commission, from going into effect.

The Pennsylvania Railroad Company has begun its fight on the two-cent fare law. In pleadings filed in the Pennsylvania courts the railroad company contends that the law is unconstitutional and was enacted without any investigation being made as to the fairness of the rate.

The Wisconsin Senate on Thursday passed the two-cent fare bill as amended by the House. The vote was nine to eight.

Publication of the May record of excavation in the Culebra cut makes possible a comparison of the rate of progress in the building of the Panama canal with railroad operations on almost as great a scale. With thirty-eight steam shovels the government forces handled 880,000 cubic yards of material in this month. In the building of the Lane cut-off of the Union Pacific Railroad the contractors in May removed 417,000 cubic yards, or almost half the Panama total, with only six steam shovels.

Industrial.

Since January 1 there were 126 new textile mills started or proposed, compared with an increase of 101 in the corresponding half year of 1906. For new construction in cotton mills there were eighty-four establishments in all, while of new woolen mills nineteen are reported. Of new construction twenty-nine are in North Carolina, eleven in Massachusetts and Texas, ten in New York, nine in South Carolina, eight in Pennsylvania and seven in Georgia.

The production of denatured alcohol for May, 172,575 wine gallons, was the lowest of any month since the free denatured alcohol measure became effective. The following are the totals for each month since the law became effective, including completely denatured and specially denatured alcohol: January, 573,546 wine gallons; February, 294,696; March, 250,421; April, 274,320; May, 172,575. Of the May production 114,711 gallons was completely denatured. Revenue officials say a large cause of the falling off is due to the fact that in the summer months there is little demand for alcohol to varnish hats. The Bureau of Internal Revenue expects to promulgate the new regulations for making denatured alcohol about July 15. The amended law, intended to encourage making alcohol on the farm, will not go into effect until September 1.

The specifications of an order for 40,000 tons of steel rails given to the Bethlehem Steel Company Thursday are particularly interesting in view of the controversy which has been going on for some time between the manufacturers of rails and the railroads. The specifications in the contracts, which were awarded by the Atchison and the Lackawanna, are much more stringent than they have been in the past. They require that 25 per cent. of the ingot be discarded from the top and that the rails contain not more than 4 per cent. of sulphur. The cutting off of the top of the ingot is to eliminate the steel which is likely to be impaired by the rising of gas and other impurities to the surface. In the past the mills have been cutting off from 8 to 13 per cent, and contracts have been calling for open-hearth rails containing not more than 6 per cent. of sulphur. Rails on these terms will, of course, cost considerably more.

According to the *Iron Age*, the output of pig iron in the thirty days of June was 2,231,575 tons, or 74,385 tons per day, while it was 2,295,505 tons in May, or 74,485 tons per day. When charcoal iron is included the total production of pig iron during the first half of 1907 was 13,500,000 tons, against 12,675,000 tons during the second half of 1906, and 12,582,000 tons during the first half of 1906. At the rate of production at which the industry entered the second half of 1907, an even larger output will be available.

Wm. A. Read & Co.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Continued favorable weather is the key to improving conditions in retail and jobbing lines, crop outlook and mercantile collections. These have gone so far now that some pessimistic views as to burdensome stocks being necessarily carried over by retailers have been revised, which, coupled with improvement in reorder business with jobbers and in payments on past business, give a more optimistic tone to the general situation than seemed possible a month ago. That some trade was lost for this season is, of course, certain, as is the fact that reduction sales have been necessary to move some slow-selling goods; but it is noted that cotton goods have again been advanced, that dress fabrics are selling better, and men's-wear woolen and clothing dealers take a much more cheerful view of the outlook.

Telegrams to BRADSTREET'S show the effect of midsummer conditions on many lines, but fall shipments have begun in larger volume than a year ago, and where the crop outlook is defined there is a slightly more pronounced disposition to buy more freely for future delivery. Crop conditions, particularly those of corn and cotton, have certainly improved greatly since July 1, and threshing returns of winter wheat in the southwest are better all around than earlier anticipated as possible. The outlook at present is for smaller but not short crops, this, of course, being predicated on a continuance of good weather till harvest. The aggregate yields of five leadiug cereals will fall, perhaps, 10 per cent. short of last year. Prices of agricultural staples reflect better prospects in lower quotations for wheat, corn and cotton. Railway earnings show larger gains over the same period a year age, and net results also promise better. Large present stocks of wheat find a balance in smaller prospective yields both at home and abroad. Bank clearings show gains alike over last week and last year, part of which may be explained by freer collections than at any previous time this year.

Money is active and rates are higher all around. Bank reserves have been down to the minimum, and foreign takings of our gold are also still possible. Investment demand is light, for new bond issues particularly so, and the early July boom in stocks has suffered a check for the time being. The leading industries note great activity, with summer shutdowns limited by the desire of manufacturers to catch up with orders. Iron demand is quiet, but production is at the maximum, and the six months' production breaks all records. Copper prices have been lowered 2 to 3 cents, with the idea of inducing consumers who have been holding off to come in. Prices of commodities as a whole are at a high midsummer level. Building is less active at some centers but of record volume at other cities, and prices of lumber and other materials reflect some irregularity.

Weather conditions still favor crops, and special mention is made in this week's dispatches to BRADSTREET'S of the satisfactory progress made by corn and cotton. Higher temperatures have stimulated the growth of corn, but irregular stands and general lateness are still complained of. In no case apparently is a crop equal to last year's looked for in any state. Best reports come from Nebraska and the poorest from Iowa. Winter-wheat harvesting is nearing completion and threshing returns are better than earlier expected. This is especially true in Kansas. Even where, as in the southwest, the crop is small, special mention is made of the excellent quality of the grain. Spring-wheat reports from the northwest are irregular, with too much or too little moisture complained of in different sections, and the outlook is for only a fair crop. Early wheat is now heading, and one dispatch denies the existence of bugs, rust or worms. The western hay crop promises much better than earlier expected, and barley also looks well, but oats are only indifferent, with reports of widespread bug damage. Wheat in the Pacific northwest looks well and a large crop is likely. General agreement that cotton has made further favorable progress is found in this week's dispatches from the south. Rains in Texas have benefited cotton and assured a large corn crop, but lateness of this plant is traditionally favorable to damage from the boll weevil, which is reported all over the state. In Alabama and Arkansas the cotton crop has made great progress. In South Carolina the fields are reported full of blooms.

The July 1 report of the Department of Agriculture proved somewhat of a surprise to the grain trade because of its showing only a trifling gain in winter-wheat condition and an actual loss in spring wheat and oats, despite the favorable weather in the last three weeks of June and the general agreement that crops had improved. All crops are below the conditions reported one and two years ago and below the ten-year average. Figured on a quantitative basis, wheat at present promises a yield 100,000,000 bushels below that of 1906, corn 367,000,000 bushels and barley 15,000,000 bushels less, while oats, strange to say, promise 8,000,000 bushels more. The aggregate yield of the five cereal crops—wheat, corn, oats, barley and rye—is 4,365,420,000 bushels, or just 10 per cent. below 1906. Thus the outlook may be said to be for smaller but not short crops, and conversely, present if not higher grain prices.

Wheat supplies in the United States and Canada on July 1 aggregated 65,550,000 bushels, an increase of 30,000,000 bushels over a year ago, and more than three times the stock held at the like date in 1905 and 1904. European stocks on the same date were 71,300,000 bushels, as against 74,700,000 bushels a year ago and 80,200,000 bushels in 1905. The combined American and European stock on July 1 was 136,800,000 bushels, a decrease of nearly 19,000,000 bushels from June 1, as against 17,000,000 bushels a year ago, but 27,000,000 bushels larger than on July 1, 1906, and 37,600,000 bushels larger than in 1905. Visible supplies are the largest held for at least eight years past, and the same is true of that portion of the invisible supply held by farmers in the United States, if the government report is correct. The consequence is an apparent American and Canadian supply of 120,000,000 bushels on July 1, a total not approached since 1900, and 39,000,000 bushels more than was held a year ago. The reverse to these bearish figures is, however, found in the fact that our indicated crop this year is 100,000,000 bushels below a year ago, and European crops also promise a large decrease, so that while present supplies are heavy, prospective supplies for the coming fiscal year are not nearly so burdensome.

Bearish views as to prices have apparently predominated in the leading domestic agricultural staples, and the cereals (notably wheat) and cotton and cotton oil have tended downward this week. In wheat this is the more noticeable because the past week saw a heavy decrease in the world's supply, and the government crop report was disappointing in showing only a slight gain in winter-wheat condition and a small loss in the spring crop. Good weather in this country but poor weather abroad, with specially bad reports concerning the Hungarian wheat crop, have been features this week. Wheat prices lost the 4-cent advance of last week. Corn has been steadier than wheat on rather poor crop reports and has eased only slightly (½@1 cent), while oats are about ½ cent up. Cotton prices are 40 to 65 points lower on the week, July and August weakest on crop reports and reported liquidation of the bull holdings. Cotton-seed oil is slightly lower, as is also lard, while butter is 1 cent up. Coffee shows more strength than for months past, futures advancing 35 points, while spots are ½ cent up on reports of damage to the new Brazilian crop. Refined sugar, after six weeks of quietness, eased 10 points this week on light demand, due to unseasonable weather, the pressure of offerings of raws from Cuba's large crop, and the nullification of the Brussels Convention regarding sugar bounties.

The latest figures available show that railway gross earnings in June exceeded those of the like month in 1906 by 13.4 per cent., the total being $82,056,350, against $72,355,927 for June last year. The mileage represented aggregated over 93,500 miles. For the full fiscal year ending with June the increase over the corresponding period for 1905-06 is 9.6 per cent. Returns for May indicate large gains in net earnings, the increase as compared with May, 1906, being something over 13 per cent. Better weather, heavy tonnage, a freer movement and an increased supply are the chief favorable developments.

Manufacturers at the east are displaying still more interest in the wool market, and sales are reported very large. Demand is very generally, however, for long staple wools suitable for fine grades of woolen and worsted goods. Old stocks are small. Fine washed delaines note special activity. Primary markets at the west are reported well cleaned up. At the London sale Americans bought only moderately, offerings not being suitable, as a rule, for this country. Medium and fine crossbreds were firm, but low grades were 5 per cent. lower.

Commodity prices as of July 1 show great strength for a midsummer period, the approximate index number on that date being $9.0404, a gain of half of 1 per cent. over June 1, and a decrease of nine-tenths of 1 per cent. from the high level of March 1, 1907. Textiles lead in strength, mainly because of the advances in cotton and cotton goods. Four groups and 57 out of 105 staple products were unchanged on the month. Compared with a year ago, the price level is 9 per cent. higher.

Pig iron continues very quiet and prices are easier. Production in the first half of 1907—13,500,000 tons—exceeded that of the corresponding period last year by 7 per cent. New business in finished lines is smaller. Demand for structural material is light, but some heavy business is pending. Steel bars are taken quite freely. Deliveries are better all around. Heavy demand for wire continues, and producers are operating at a brisk rate. Lake shipbuilders are specifying heavily on materials for vessels. Cast-iron pipe is somewhat weaker. Scrap tends to decline in price, and further reductions are expected. A comparatively large business in open-hearth steel rails on special specifications is reported, but otherwise the market is quite dull. The paucity of crude steel, especially in the Pittsburgh district, continues quite marked, and one plant in the Ohio valley has been diverted from rails and sheet bars to the manufacture of steel billets. Shipments of ore from the lakes are of record proportions, being 6,433,000 tons in June. Coke is not so firm as last week, nor is it so weak as a month ago, the supply being large, with demand only moderate. Copper is much lower, the long-expected "official" break in prices having materialized. Some new business followed as the result of the reduced prices, but thus far there has been no general buying movement, and there is a disposition to question whether prices have been lowered sufficiently to induce an active demand from American concerns. Because of the ease in copper, lower quotations on crude brass goods are expected.

Stock values at New York are firmer with moderate activity after having in the midweek shown sharp declines on higher money, the reduction in copper values, governmental attacks on corporations and other adverse developments. The practical failure of the Atchison and Union Pacific bond subscriptions was also regarded as unsettling. More favorable financial and speculative prospects abroad, together with the increased short interest, seem responsible for the later improvement. Foreign exchange has broken sharply on free offerings of finance bills, demand sterling falling from 4.87.10 to 4.86.50, which decline checks gold exports, $1,750,000 of the metal having been sent to Paris early in the week.

Bank clearings for the week ending July 11 aggregate $2,982,744,000, 7 per cent. above last week and 4.8 per cent. over this week last year. Outside of New York exchanges amount to $1,210,712,000, 12 per cent. over last week and 14 per cent. over the week last year.

Business failures for the week ending July 11 number 185, against 135 last week, 143 in the like week of 1906, 166 in 1905, 203 in 1904 and 173 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending July 11 aggregated 3,264,714 bushels, against 2,098,904 bushels last week, 1,952,273 bushels this week last year and 5,016,149 bushels in 1901. For the first two weeks of the fiscal year the exports are 5,363,618 bushels, against 3,697,616 bushels in 1906-07 and 8,803,788 bushels in 1901-02. Corn exports for the week are 1,411,675 bushels, against 1,410,804 bushels last week and 594,718 bushels in 1906. For the fiscal year to date the exports are 2,822,479 bushels, against 1,286,318 bushels in 1906-07.

IN CANADA.

Favorable weather has still further stimulated retail trade distribution in Canada and enlarged reorder trade with jobbers, the result being that trade opinion is much more optimistic than seemed possible some time ago. Predictions are now freely made that stocks in retailers' hands will be well cleaned up and that the amounts carried over will be small. Collections are better as a whole, but complaint still comes from the west, where land speculation is credited with having some effect. Money is in active demand—tight, in fact, in some sections. The building, hardware and grocery trades note chief activity. Industry is active and labor scarce. General advances in cotton goods prices are looked for for fall. Exports as a whole are rather light, but wheat shipments are the largest of the year. Failures for the week number 28, as against 16 last week and 19 in this week a year ago. Clearings for the week aggregate $97,545,000, a gain of 18 per cent. over last week and of 13.5 per cent. over this week a year ago.

WEATHER FAVORS ALL CROPS.

CORN CUTTING DOWN ITS EARLY HANDICAP OF LATENESS, BUT STILL BACKWARD. WINTER-WHEAT HARVESTING GENERAL AND THRESHING RETURNS IN SOUTHWEST BETTER THAN EARLIER SEEMED POSSIBLE. QUALITY EXCELLENT. A FAIR CROP OF SPRING WHEAT INDICATED. HAY AND BARLEY PROMISE WELL. OATS INDIFFERENT. BUG DAMAGE WIDESPREAD. PACIFIC COAST WHEAT PROMISES LARGE YIELDS. SOUTHERN CORN DOING WELL. COTTON ALSO GAINING GREATLY, THOUGH STILL BACKWARD. RAINS IN TEXAS HELP PLANT GREATLY. BOLL-WEEVIL DAMAGE FEARED. FRUIT AND VEGETABLE CROPS PROMISE BETTER AT THE NORTH AND EAST.

CHICAGO.—Corn has made good progress this week with higher temperatures and has overcome part of the lateness on good, well-cultivated land, but on poor soil has made little progress. The stand is irregular—one to two stalks to a hill, where there should be double that number. The condition is below last year's in the leading

sections, but with favorable weather it is expected to largely improve. A good many fields are being laid by. Heavy rains over eastern Iowa and central Illinois prevented working in the fields. Winter-wheat harvest is nearing completion, and threshing, while irregular, is better than anticipated. Estimated yields in Kansas are being raised and range from three to twenty-five bushels, with the average around ten to fifteen bushels. Illinois shows better results than expected. Numerous complaints come from the spring-wheat country of scarcity of moisture in sections of western North Dakota and a section in the central part of the state, while the Red river valley has had too much rain. The stand is irregular and very thin in spots, and a fair crop is all that can be expected. Reports on oats are unusually irregular from Wisconsin, Minnesota, South Dakota and the central regions. Green bugs are said to be working in the northwest and damaging late oats. Prospects for hay are improving.

CINCINNATI.—Wheat is largely harvested and promises well. Oats show fair stands only. Corn is growing rapidly. Tobacco is all planted and looks well.

INDIANAPOLIS.—Harvesting of winter wheat is now well under way. Reports from the different counties vary, some reporting a full and normal yield, others that the yield is only from ten to twenty bushels per acre. Oats appear to be in a bad way, reports indicating that the green bug and rust have done considerable damage.

TERRE HAUTE.—Weather conditions are favorable for growing crops.

ST. PAUL.—The crop outlook on the whole is good, but six counties in North Dakota are somewhat doubtful. Corn is making remarkable progress, early wheat is heading and barley is full-headed. An excellent crop of hay is being harvested. There are no bugs, rust or worms.

DAVENPORT.—The growth of corn is stimulated by good weather. It is estimated that the corn crop will be 50,000,000 bushels short of last year.

DES MOINES.—Corn has had practically its last plowing and conditions generally are favorable for rapid growth, but there is widespread evidence of a large shortage in the yield. Oats, spring wheat and barley are doing well.

SIOUX CITY.—Good growing weather with plenty of rain helps crops. Corn and small grain are doing well, though a little backward.

SIOUX FALLS.—Crops have made remarkable growth and the outlook is very good.

OMAHA.—The past week has been very favorable for corn, which is almost normal in height. Oats are making rapid growth and an average crop is anticipated. Reports indicate that the winter-wheat crop will not be as short as was expected some weeks ago. Harvesting is now in progress.

ST. LOUIS.—The wheat crop is short but is of exceptionally fine quality. Corn is making good progress, and although it is about six weeks late, the crop is expected to be very large and of good quality. Fruits and vegetables are scarce, and good prices are obtained for top grades.

ST. JOSEPH.—Corn has materially improved the past week. Prospects are good. Wheat cutting has commenced, but not enough has been threshed to estimate yields.

KANSAS CITY.—Harvesting of wheat in Kansas will be completed this week and will show better results than were expected, the estimated average for the state being thirteen to fifteen bushels per acre. The yield is placed at from 60,000,000 to 70,000,000 bushels. Corn shows some improvement under favorable conditions, though it is still backward.

WICHITA. — Wheat is yielding better than anticipated. Favorable reports come from every part of this district. Lack of harvest hands is serious.

CHARLESTON, S. C.—Hot weather is very favorable to cotton, which is looking finely. The fields are ablaze with blooms.

JACKSONVILLE.—The acreage sown to crops was reduced by the spring drought, but conditions have been greatly improved by abundant rains.

RICHMOND.—The weather is favorable for growing crops, but in some sections rain is needed. The wheat and hay crops, which are fair to good, are being harvested.

AUGUSTA.—Cotton appears to be in a healthy condition and a good crop is anticipated.

ATLANTA.—Cotton is progressing fairly well. Heavy rains have fallen, accompanied in some instances by hail, but no serious complaints have been heard of damage to cotton or other crops.

MACON.—Crops need more rain.

BIRMINGHAM.—Crop conditions continue to improve.

MOBILE.—Favorable weather continues and cotton and corn are developing in good form. Recent showers were very beneficial, especially to truck.

MONTGOMERY.—The weather the past week has been very favorable to crops, and cotton has improved wonderfully the past few days.

MEMPHIS.—Weather conditions are favorable. Crops are making good progress.

LITTLE ROCK.—Crops are making very satisfactory progress, especially cotton, but rain is now needed. The stand is good and the plant is well cultivated. Labor is ample.

NEW ORLEANS. — Crops are making good progress.

DALLAS.—A good corn crop is assured. Cotton is doing well, but the outcome cannot at this time be determined, as boll weevil is reported plentiful and doing considerable damage.

FORT WORTH.—Heavy rains have fallen, covering almost the entire state. The corn crop is assured and the rain was beneficial to cotton. The outlook is favorable.

WACO.—Crop conditions continue to improve. Recent showers proved very beneficial to maturing corn. Cotton is making good headway.

PORTLAND, ORE.—All crops promise well.

SPOKANE.—Weather conditions favor a large wheat crop.

TRADE REPORTS.

At New York a very fair amount of business has been transacted during the past week in all departments of the dry-goods trade. Cotton and silk goods continue in the lead as to activity, though all other departments have had a fair share of attention, and sales are about equal to those for the corresponding period of 1906. Woolens for men's wear have been in better demand and orders for the spring season of 1908 are larger than expected. Collections are reported good. Manufacturers of silk are awaiting the arrival of new raw material before making purchases, and have apparently enough stock on hand for current needs. Prices are steady. Woolen and worsted yarns are holding firm in price, with an upward tendency. The supply appears limited and spinners are unable to keep up with the demand. The millinery trade is not so active, but men's straw hats continue to sell well, though the volume of sales does not equal last year. In the cloak, suit and waist line business continues good, manufacturers are getting ready their fall lines and are booking large future orders. Collections are very satisfactory. The continued warm weather is bringing considerable trade to retailers, who are beginning to make up for the dullness of the early summer business. Manufacturers of shirts, gloves and neckwear continue to do an active business, and prominent concerns have received good fall orders. Jobbers of hosiery and knit goods have had a good season, and are looking forward to an equally favorable fall and winter business with considerable confidence. Rags and shoddy continue on the whole inactive, though the higher grades are being inquired for and going fairly into consumption. Wholesale grocers report trade only fair, sales for local wants being less than in 1906, though out-of-town buying is fairly good. Retailers are experiencing the usual midsummer inactivity. Butter, on shorter receipts, has advanced 1 cent. Cheese is in fair demand, and only a small quantity was offered for export. The market for fresh-killed poultry is firm. Eggs are still being received in excess of present needs and are being stored, but the price is maintained. Receipts of live stock and dressed meats are light, the demand for the better grades is less and price has fallen somewhat, but that of second grades has advanced. The flour trade is fairly active and jobbers buy freely when small concessions are made. Conditions in the hardware and cutlery trades, especially in the latter, have improved, domestic manufacturers in many instances having orders to keep them busy for the next six months at an advance in price of 10 per cent. Tin and enameled ware are also in better demand, and factories are running full time. Money, however, in these lines appears to be tight and collections are not as good as they might be. The long-anticipated cut in prices of copper—to 22–23 cents per pound—was announced on July 9 and resulted in some buying to cover orders. Pig iron and structural steel are quiet and pig tin is lower. The leather trade is now fairly active and fancy leather is in better request than for some months past. Retailers of suit cases, traveling bags and men's and women's belts are moving their stocks. In the jewelry trade low-priced articles are in fairly good request, but the more expensive grades are not much inquired for. Anthracite coal is quiet, though small and steam sizes are being purchased. In the sea-coast trade there is a scarcity of transportation facilities, and freight rates are high. Conditions in the drug and chemical trades are satisfactory and business about normal. The wholesale tobacco market is quiet, stocks are low and prices firm. Suburban operators in real estate claim that they are disposing of their properties at good prices. Collections in the paper trade continue fair to good, and business equals expectations.

The following telegrams show trade conditions at the cities mentioned for the week ending July 12:

BOSTON.—Business in summer dry goods continues active, and stocks of light and fancy fabrics and wearing apparel are being cleared out satisfactorily. Cotton goods in all lines show strength. Prices have been advancing remarkably, and in some lines are still being marked higher. There is more conservatism on the part of agents and jobbers owing to the high level of prices, and there is more consideration regarding the extension of credit. Men's furnishings and hats are in good demand, and both jobbers' and retailers' stocks of summer goods are being substantially reduced. There is considerable curtailment in all departments of the paper trade, but compared with other similar periods, business is quite good and the tone of the market is good. The situation in domestic paper stock is satisfactory to dealers, supplies, particularly of old papers, being relatively scarce and prices generally firm. New business in foreign rags is of moderate proportions, buyers not being disposed to place orders except at concessions. The poor condition of new potatoes is disappointing, but there is still a large stock of old on hand, and quotations are on a low level.

PROVIDENCE.—Retail trade has materially improved. The cotton-goods market holds firm, and in the jewelry trade conditions are excellent for the summer season. Collections are fair. Lumber and other building material show a fair amount of activity for the season, prices holding firm.

PORTLAND, ME.—Railroad travel and business at summer resorts continue good and trade in other lines is considerably stimulated in consequence. Many merchants report the volume of trade for the first half of the present year up to and in some instances greater than that of last year. There are no strikes of consequence in the state.

PHILADELPHIA.—Wool is quiet. Manufacturers are fairly busy and prospects for fall business are good. Dry goods, both with jobbers and retailers, feel the summer exodus, but sales are fully up to last year. Collections are rather sluggish. Flour is rather weak and hard to sell. Chemicals and dyestuffs are draggy and the market rules dull. Paints and glass are more active, retailers reporting an improved demand, though business is hardly up to previous years. Lumbermen report an improved demand, manufacturers especially claiming that they have all the business they can profitably handle. Jobbers complain of slow collections and carefully scrutinize credits. Retailers report a fairly active trade. Leather market is dull. Hides and skins show little activity. It is said the large packers of the country will tan the old hides, which should take the larger proportion out of the market, creating a sale for new hides, with a corresponding improvement in the tone of the market. Goatskins continue dull and weak on small demand and full supply at slightly decreased prices. Boot and shoe dealers report only a fair business. Tobacco sales and inquiries are fair. Havana is not so active. For Remedios, first capiduras, they expect for 70 cents that for which 80 cents is asked. Large buyers having stocks of most kinds bought ahead can hold off for some time yet, hoping for lower prices. Liquor dealers are doing little business. The situation in pig iron is a waiting one. There is no change in prices, but the market is easier, and early deliveries without premiums are less difficult to obtain. Scrap material is weaker. Finished materials are improved, and a fair business is being done in bar iron. The production of anthracite coal was larger in June than in the corresponding month last year, much of it going to replenish storage stock. Demand is quiet. Bituminous business is good for the season, prices for coal of quality being steady. Eastern consumers appear to have delayed buying in anticipation of lower water freight rates, which are now improbable, and it is expected that the demand from the east will give an earlier stimulus to trade than is usual.

PITTSBURGH.—While no transactions have been reported in the pig-iron market during the week and there has been but little inquiry, consumers being covered for some months to come, there is apparently no weakening in quotations. In this immediate district there is but one furnace out of blast, and all are being crowded for delivery, as are also the finishing mills, and it is generally believed that the present active conditions will continue to prevail until the end of the year at least. Coke has eased up a little, but there has been no material change in prices. There is a continued large production and an ample supply. Nominal quotations for pig iron for immediate delivery at the valley furnaces are as follows: Standard Bessemer, $23.50; chilled basic, $23; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2.35, and foundry coke, $3.25 to $3.50.

BUFFALO.—Trade appears about the same as reported last week, with collections fairly good. The live stock and produce markets are fairly active, prices are firm and stock is in good demand,

BALTIMORE.—Continued warm weather has aided in the free movement of stocks at retail, particularly clothing, men's furnishings and straw hats. Clearing sales have also added to the volume of business for the early part of July. Jobbers of dry goods and notions report a fair volume in the way of fall orders. There seems to be, however, a tendency to reduce amounts, as no further advances are looked for, and a number of buyers await coming to the market to complete fall purchases. During the week a few buyers have been on from the far south, and an increased number is looked for later in the month. Men's furnishings have been ordered rather freely for immediate wants, and a fair business has been done in shoes. Jobbers in crockery and harness are actively employed, and the outlook for a good fall business is encouraging. Tardy collections, as a rule, still prevail in these lines. Clothing manufacturers report fewer discounts taken than for several years. Wholesale grocers report a decrease in the volume of business from last week. Prices of canned goods continue high. Maryland leaf tobacco continues in fair demand, with liberal receipts and unchanged prices, and there is some little demand for better grades of Ohio leaf. The oil market continues steady, with demand fair. Turpentine is steady and demand good. Box factories are having a busy season. A good stock of board lumber is on hand, with a fair demand. Oak is plentiful, but a shortage in poplar is reported. Prices as a whole are firm, with a higher tendency on some grades. Drugs at wholesale are in good demand, with fair collections. Collections in the majority of lines are slow, and the return of about $1,000,000 of United States government deposits of September 30, 1906, finds the local market tight and the supply fully taken at the unchanged rate of 6 per cent.

CINCINNATI —General business is slow, with a slight decline in some of the leading staples. Demand for money has declined.

CHICAGO.—Business shows moderate activity, with dry goods houses doing mostly a reassorting trade. Shipments of fall goods have commenced and exceed those of last year. New buying for fall delivery is fair. Iron and steel manufacturers

report a falling off in new business, but say there is about the usual amount for this season, mostly structural material, steel bars and rails. Pig iron is quiet. Bituminous coal is easy, with a large movement to the west which is stocking up. Calls for lumber are slightly enlarged. Groceries are in fair sale. Eggs have advanced, but poultry and potatoes have declined. The advance in cattle is well maintained. Hogs are higher. Sheep and lambs are firmer. Receipts of all live stock have increased. Money is firm, with a good general demand.

CLEVELAND.—While comparatively quiet, wholesale trade in leading lines is fairly satisfactory for midsummer. Manufacturing concerns are busy, and the outlook for fall is regarded as favorable.

INDIANAPOLIS.—Trade, wholesale and retail, is good considering the season. Collections show a slight improvement.

TERRE HAUTE.—Wholesale and retail circles report moderate progress in sales and collections.

ST. LOUIS.—Merchants are preparing for house trade. A few early buyers are now in the market, but trade is expected to open up actively in about two weeks. In dry goods, shoes, hats, notions and kindred lines, the volume of filling-in orders has been very satisfactory and prices well maintained. Traveling men have booked some good orders for early shipment. Hardware, both shelf and heavy, continues in good demand at firm prices. Building materials show a slight falling off. Lumber has declined in price $1 per 1,000 feet. On the whole, the general outlook for fall is very encouraging. Large department stores are continuing their midsummer clearance sales with good results. Collections are good, and thus far but few extensions have been asked. So far, but little money has been shipped to country banks. Groceries and provisions are very active at firm prices. Drugs, paints, oils and glass show an increase over last year at the same period.

KANSAS CITY.—Jobbers in dry goods and leading lines report country merchants more liberal in placing orders for future delivery. Trade in all lines shows steady improvement. Retailers are having a very satisfactory business, and collections are better than for some time past. Money is in good demand at normal rates.

WICHITA.—Trade is active and collections are much better.

MILWAUKEE.—Trade continues good in jobbing and retail circles. Collections are fair.

SIOUX CITY.—Trade is good in all lines. Collections are fair.

DAVENPORT.—Retail trade continues rather quiet and hardly equals the corresponding time last year. Collections are slow.

ST. PAUL.—Business in all lines continues very active, and in some capacity is strained to the utmost. One dry-goods house is putting 40 per cent. more on its books than last year. Collections come in nicely but do not keep pace with the volume of business.

OMAHA.—Trade in general is quite satisfactory. Jobbers in groceries, drugs and hardware report sales beyond expectations. Collections are only fair.

LINCOLN.—Wholesale and retail business is fair. Collections are slightly improved.

SIOUX FALLS.—Trade in general is good, while collections are fair to good.

CHARLESTON.—Wholesale trade continues good, while retail is seasonable. Collections are slow.

RICHMOND.—Retail trade is more active. Collections are fair. Wholesalers of dry goods continue to receive satisfactory orders for fall, but few filling-in orders are noted. Richmond continues to grow in importance as a coffee market. Those who previously operated here have increased their capacity; new factories have been erected, and all engaged in this line are active. Brokers report increased sales, and larger direct importations are noted. Wholesale dealers in and manufacturers of drugs and sundries have had a successful season, and prospects are encouraging. Manufacturers of flavoring extracts and specialties here have extended their territory, and foreign shipments are noted. Those engaged in this line are working at full capacity, and ordering for summer season has been liberal.

WHEELING.—Retail business in all lines is quite active. The usual midsummer shutdowns of glass, pottery, iron and steel industries are being shortened to the minimum on account of the press of business. Jobbing salesman are preparing fall samples. The iron market is steady, with good bookings ahead. Collections as a whole are rather slow.

AUGUSTA.—Trade is fair.

ATLANTA.—The usual summer dullness prevails in trade circles, but in wholesale lines business is equal in volume to that of last year. A strong probability of the state total prohibition bill passing the House and Senate has materially affected sales of liquors and cigars throughout the state.

MACON.—Owing to the closing of the Exchange Bank, trade is very slow.

JACKSONVILLE.—Trade and collections are normal. Real estate shows a constant advance.

BIRMINGHAM.—Southern foundry No. 2 pig iron sells at $22.50 for immediate shipment. Demand is not quite so strong. Trade in general is holding its own, with collections a little slow.

MOBILE.—Local jobbers report doing a good business for future delivery. Collections are somewhat improved. Retail sales are not up to expectations, and some uneasiness is felt owing to rather heavy stock on hand, caused by the late spring and summer.

MONTGOMERY.—Trade in both wholesale and retail lines is about on an average with that of last week.

MEMPHIS.—Collections are fair.

NASHVILLE.—There is general disappointment at the outcome of the wheat crop, which is very light, but is redeemed to some extent by its good quality. Trade with retail dealers is quiet and the same can be said of jobbers, though staples are still measurably active. Manufacturers have about caught up with their orders.

LITTLE ROCK.—Jobbers report filling-in orders coming in rather slowly, but retail trade is fairly good. Collections are very slow.

NEW ORLEANS.—General trade is seasonable and in good volume. Collections are rather better than usual. Weather conditions are fine.

FORT WORTH.—Trade is only fairly active.

DALLAS.—Jobbers report but little improvement in trade conditions, and a good many orders are being held up pending the clearing of crop conditions. Collections are quiet.

WACO.—Jobbers report satisfactory business. Collections are fair.

SAN FRANCISCO.—Business is quiet, with collections fair.

SEATTLE.—There has been a marked falling off in Alaska on orders, caused mainly by labor troubles. Conditions generally are only fair.

SPOKANE.—Wholesalers in general report a large business. Collections are fair.

TACOMA.—Trade, wholesale and retail, continues steady. Building is active,

PORTLAND, ORE.—Business continues good in all lines. There is, however, a little falling-off in demand for lumber.

TORONTO.—Trade holds steady. In all lines there is an excellent summer business moving. Dry-goods men report that sorting orders are heavy. In some lines of goods these orders go unfilled, owing to the fact that stocks are light. The trade generally has well gotten over any fear that heavy retail stocks will be carried over at the close of the summer. Stocks were originally light, owing to the difficulties of securing shipments from the wholesalers, and the continued hot weather has greatly helped in their movement. The outlook for fall trade continues exceedingly satisfactory and orders have been heavy. In hardware there has been unexpected activity, owing to the great demand for builders' supplies. Metals and other heavy goods are also exceedingly brisk. The situation in canned goods is the feature of the grocery trade. Stocks in some lines of vegetables are almost out, and prices all around are firm. There are still complaints regarding western collections, although those from Ontario points are fairly good. Local manufacturers are about as busy as they have been for the past many months. Money is tight, and in some quarters, it is said, it is hard to obtain enough for necessary industrial expansion. Enlargement of plant and factory buildings seems to be general throughout Ontario.

MONTREAL.—A good midsummer trade is now moving in all lines of wholesale goods. Sorting orders for dry goods are better than had been expected. Values hold firm, and further advances are expected on cottons and linens. Stocks of the latter are light in all hands. It is stated that at the end of this summer's trade all factors which have assisted in keeping down textile prices to retailers will cease to be effective, as all stocks bought at old levels will be wiped out. This will necessitate considerable advances in all lines. The movement in both groceries and hardware continues active. A good retail trade is reported from all parts of the country, and collections are generally fair to good. A record business is being done at this port in the way of incoming shipping. Export trade still falls behind that of last year in many particulars. The demand for dairy products is heavy. Stocks are now coming forward fairly well, but prices hold firm. Live-stock prices are steady. Demand for iron and steel and for all construction supplies continues exceedingly heavy. Money holds firm.

VANCOUVER-VICTORIA.—Summer trade continues to show a good tone all along the coast. The movement of wholesale and retail stocks is brisk and collections are generally fair to good. Activity is general in local industries and there is still a scarcity of labor, despite the fact that the number of immigrants coming into this part of the country is unusually large. The activity in mining and lumbering is creating a brisk demand for provisions for the interior.

WINNIPEG.—The feature here at the moment is the very satisfactory way in which fall business is being booked. Travelers' orders and mail orders are coming in quite briskly. There is also a good sorting trade moving, and the demand for all summer lines is brisk. Retail trade is reported fairly brisk in all directions. Collections, however, are slow to improve. Great building activity exists in all parts of the city, and there is also much land speculation being indulged in.

Money Market.

Last Saturday's unfavorable bank statement was to a certain extent disregarded, the reduction of the surplus reserve to below $1,000,000 being thought to show worse conditions than actually existed. At the same time the loan market during the week was influenced by the repayments of the $30,000,000 of government deposits which were completed on Wednesday, these operations resulting in a loss by the banks to the Treasury for the week of $10,500,000. The effect of this, of course, was offset to some extent by the redemption of the maturing 4 per cent. bonds, as well as by receipts of new gold from the Pacific coast, the estimated actual result of the weekly movement of money being a loss by the banks of about $6,000,000. The subscriptions for the new Union Pacific and Atchison bonds were also regarded as in the nature of a disturbing influence. A favorable element in the situation of the market was the reappearance of considerable amounts of foreign money, the pressure of bills of exchange drawn in connection with sterling loans resulting in a sharp depression of foreign exchange, which had been strong and high at the beginning of the week, so much so, indeed, that $1,750,000 in gold was shipped to Paris on Monday. While call money was comparatively easy in the first days of the week, a much firmer tone prevailed later on, and on Thursday renewals were made at 6½ per cent., but 4½ per cent. was the prevalent quotation on Friday. There was a further hardening in time money, the rate asked for loans on mixed collateral for six months or more being 6 per cent., although only a comparatively small amount of business is reported at such figures. Mercantile paper is exceedingly dull, 6@5½ per cent. being the rate quoted for double names.

New York Banks.

Although the Clearing House institutions were estimated to have gained in the neighborhood of $5,000,000 cash during the week ending last Saturday, the statement of averages published on that day showed a loss of $5,025,900 in the cash items. No explanation of an entirely satisfactory character was forthcoming as to the reversal of what was expected to be the outcome, some unreported local movement or a carrying over of gold shipments to Europe from the averages of the preceding week being generally talked of. The loans were decreased by $10,814,800, which was evidently the result of the shifting of balances from the banks to other institutions. With this there was a decrease of nearly $4,500,000 in the deposits, which was some $2,000,000 less than was called for by the other changes. This left the reserve requirements $3,372,000 smaller; but the surplus was reduced only $856,000, the smallest amount at this period of the year in some time. The figures of the statement compare as follows with those of the preceding week:

	July 6	June 29	Changes
Loans	$1,115,724,300	$1,126,539,100	D. $10,814,800
Specie	199,710,500	200,792,500	D. 1,082,000
Legal tenders	70,780,800	74,724,700	D. 3,943,900
Deposits	*1,078,540,200	1,092,031,700	D. 13,491,500
Circulation	50,396,400	50,407,300	D. 10,900
Total reserve	270,491,300	275,517,200	D. 5,025,900
Reserve required	269,635,050	273,007,925	D. 3,372,875
Surplus reserve	856,250	2,509,275	D. 1,653,025

The following table shows the bank holdings on the respective dates:

	July 6, 1907	July 7, 1906	July 8, 1905
Loans	$1,115,724,300	$1,050,578,100	$1,116,458,500

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending July 11 shows an aggregate of $2,982,744,000, as against $2,768,461,000 last week and $2,845,919,000 in the corresponding week last year. Canadian clearings for the week aggregate $97,545,000, as against $82,358,000 last week and $85,907,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	July 11	*Inc.*	*Dec.*	*July 4*

Foreign Exchange.

At the beginning of the present week the foreign exchange market continued to display a great deal of strength, bankers' demand sterling being firm on Monday at around 4.87.10. No surprise was, therefore, felt that $1,750,000 more gold should have been engaged on that date for shipment from New York to Paris. In fact, it was generally thought that further engagements would be made later on. As the week progressed, however, exchange quotations began to soften, there being, apparently, a fair supply of loan bills in the market. The hardening of money rates was also effective in depressing exchange, demand sterling falling by Thursday to as low as 4.86.50, with corresponding declines in other classes of bills. This movement naturally put an end to further gold exports, though it is considered that in the absence of additional offerings of finance bills the market would be apt to recover once more to the gold shipping point. Quotations, however, continued to be weak on Friday with renewed offerings of loan bills, the posted quotations being reduced ½ cent, to 4.84@4.87½.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

July 6	*July 8*	*July 9*	*July 10*	*July 11*	*July 12*
4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84 @ 4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.87.00 @ 4.87.10	4.87.00 @ 4.87.10	4.86.90 @ 4.87.05	4.86.60 @ 4.86.75	4.86.50 @ 4.86.75	4.86.50 @ 4.86.60

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.84.00 @ 4.84.20	4.84.00 @ 4.84.20	4.83.80 @ 4.84.00	4.83.50 @ 4.83.75	4.83.50 @ 4.83.75	4.83.30 @ 4.83.40

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.95@4.87; commercial bills, 4.82½@4.83½; francs, 5.20 less 3-64@5.16⅞ less 1-64; reichsmarks, 94⅜@95 3-16 less 1-64.

The Bank of England's discount rate is unchanged at 4 per cent. It reported for the week a gain of £352,743 in specie, and the proportion of reserve to liability rose from 38.34 per cent. to 43.71 per cent. There was also a reduction in the loans to the market of no less than £8,055,000. In the London open market call money is quoted at 2@2¼ per cent., and discount at 3⅝ per cent. The Bank of France showed an increase of 25,325,000 francs in gold held, and reduced its discounts by the large sum of 254,650,000 francs. Discount in the Paris market is 3⅜ per cent. At Berlin the bank rate is 5½ per cent. and the market for discount 4½ per cent.

New York Securities Market.

Considerable irregularity prevailed in the movements of stock-market prices this week. The trading continues to be almost entirely professional in origin, and during most of the time transactions have been on a very restricted scale. At the end of last week and the beginning of the present one some strength was shown, despite the fact that last Saturday's bank statement nearly extinguished the surplus reserve, while foreign exchange continued so high that engagements of $1,750,000 of gold were made on Monday for shipment to Paris. The action of the market, however, left little doubt in the minds of most observers that the apparent bullishness was in the main artificial and represented manipulation by various interests. The efforts to put prices up, however, could not be maintained in the face of a number of adverse developments which successively made their appearance, embracing as they did renewed firmness in money, announcements that the government had instituted suit against the American Tobacco Company (the proceedings involving an application for a receiver of that organization), and of an attempt by the New York state law department to force a dissolution of the Interborough-Metropolitan merger, together with a less favorable crop report than had been expected and rather conservative interviews upon the steel trade and business outlook by such authorities as Judge Gary and Mr. H. C. Frick. In addition, there was not a little attention paid to the apparent indifference of the Union Pacific and Atchison stockholders toward the rights to subscribe for the new convertible bond issues of those respective corporations. In fact, the wisdom of the Union Pacific in having the $75,000,000 bonds of that company underwritten was shown by the later intelligence that when the subscription expired only about $5,000,000 of the bonds had been taken by the shareholders. In the case of Atchison, the report was that of the $26,000,000 of new 5 per cent. bonds, only about $9,000,000 had been applied for, leaving some $17,000,000 to be disposed of later on, there having been no underwriting syndicate organized. Under these influences the general market was subjected to not a little selling pressure, the downward tendencies being accentuated by a sharp break in Amalgamated Copper and weakness in the other copper stocks, as a result of the reduction in the selling price of the metal. The whole market, in fact, became more active at the expense of prices, Union Pacific taking the lead in the decline which began on Tuesday, and became quite severe in Wednesday's transactions. At the same time a comparatively few stocks, like Amalgamated, Union Pacific, St. Paul and other active speculative features, supplied the bulk of the dealings, the declines in other directions being mostly of a sympathetic nature. Thursday's market showed more or less indecision. In fact, it would seem that the increase of the short interest had become rather excessive, and there were also some favorable developments, the chief of which were the firmer appearance of the foreign markets on the completion of the fortnightly settlement in London and a break in foreign exchange at New York, which ends for the moment any opportunity to export gold, and which, moreover, was plainly the result of renewed offerings of foreign loan bills. In spite, therefore, of the fact that money inclined to harden, the renewal rate for call loans rising to 6½ per cent., the market halted and scattered covering created a slightly better range of prices in many cases, this movement assuming a more decided form on Friday. The close on that day was firm in spite of the restricted dealings and the continued irregularity in the price movements.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week ending July 6 compares with the preceding week and similar periods one and two years ago as follows:

Week ending	Flour, barrels	Wheat, bushels	Corn, bushels	Oats, bushels
July 6, 1907	303,549	3,391,938	3,642,149	2,238,534
June 29, 1907	344,363	3,201,300	5,498,050	2,388,027
July 7, 1906	352,571	2,163,931	3,900,120	3,242,420
July 8, 1905	287,764	1,873,042	4,611,535	2,526,283

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	July 5, 1907	June 28, 1907	July 6, 1906
American	2,138,037	2,276,225	1,616,113
Other kinds	1,315,000	1,340,000	1,265,000
Total	3,453,037	3,616,225	2,881,113

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	July 5, 1907	June 28, 1907	July 6, 1906
Great Britain and continent	2,137,000	2,249,000	1,477,000
Egypt	74,000	82,000	66,000
India	747,000	758,000	863,000
United States	495,000	527,000	475,000
Total	3,453,000	3,616,000	2,881,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	Last week	Last year
Week	25,325	26,043	51,008
Season	13,189,150	13,163,825	10,795,224

Boston Shoe and Leather Market.

Buyers of footwear engross the attention of shoe manufacturers, who have little opportunity to go into the leather market. While some supplementary orders for fall goods have been placed, business has not yet come up to expectations. The cheaper grades of footwear are very quiet, demand being in the direction of higher grades. The leather market has not yet attained the activity anticipated after the national holiday. Prices are held firmly in spite of every effort made to induce concessions. Hides are somewhat unsettled. There appears to be a shortage of strictly No. 1 selections, and bidders are encouraging advances by their eagerness to secure immediate supplies. Seconds and inferior selections are accumulating and prices are soft. There has been a recession of 3 or 4 cents a pound on long-haired and grubby hides as compared with six months ago. Brokers report the foreign market stronger in all directions, particularly in calfskins, which have advanced from 1 to 1½ cents a pound. Shoe shipments are normal for the season. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 88,362 cases; preceding week, 90,510; last year, 88,163; total for 1907, 2,553,702; total for 1906, 2,652,612; decrease, 98,910.

Wool Markets.

Very heavy sales have been made during the past week, the aggregate reaching figures which the dealers are very loath to express an opinion upon, and even larger sales are pending. Manufacturers are inclined to anticipate the opening of the season on domestic wools, and are showing very great interest in all fine clothing and staple wools, this being chiefly on account of the public demand for the finer grades of woolen and worsted goods. Any wool running to fine staple has sold at full prices, the market looking very strong and as if it were on the verge of an extremely heavy buying movement. With the exception of scoured and low foreign crossbreds, there has been less old wool carried over than for several seasons. The new wools are arriving very freely, but few dealers have yet been able to open them. Wools to arrive have sold, therefore, more freely than usual. Fine washed delaines have been in particularly active demand, and the sales of the week have included several hundred thousand pounds of delaine, fine washed bringing 37½ and 38 cents, with 40 cents predicted. Other sales have been unwashed delaine at 31@32 cents, large lots of eight months Texas at 23@24 cents and twelve months at 27 cents, middle county California at 22@24 cents, some South American straight quarters at 36@36½ cents and high quarters at 37½ cents. There is little doing in Australian wools, as the stock consists mainly of low crossbreds, which are not wanted. Primary markets are now well cleaned up, the bulk of the wools remaining in the country unsold being in Montana, and for these wools there is active competition. Seventy-five per cent. of the clip of this state is sold up, however, the last sale being at Fort Benton, of 600,000 pounds to a Boston house at 22½ cents. Generally, recent sales in Montana have been at 21½@23 cents with a range from 20½ to 23½ cents. The new Montana wools are inclined to be tender, but are of good staple, and the shrinkage will be from 3 to 5 per cent. less than last year. Oregon wools were cleaned up Thursday by the Elgin sales. At Shaniko, July 8, 1,000,000 pounds sold at 19½@21 cents. The London sales opened July 9 with a good attendance of buyers. Americans bought moderately, as the offerings contained little wool suitable for this country. Medium and fine crossbreds, as predicted, opened very firm at the previous level, while other grades opened 5@7½ per cent. lower.

IRRIGATION IN MESOPOTAMIA.

Consul William C. Magelssen, writing from Bagdad, in Asiatic Turkey, calls attention to a vast irrigation programme in that arid country and to the present demand for pumping plants. He says:

"In ancient times, when the whole of Babylonian-Mesopotamia and the greater portion of the country lying between the Tigris river and the mountains of Persia and Kurdistan were artificially irrigated, these parts held the principal granaries of the world. The luxurious growth of grain upon these alluvial flats excited the wonder of the Greek travelers who visited the east, and, according to Herodotus, the soil yielded commonly two hundred fold and sometimes three hundred fold. When the Chaldeans peopled the delta of the Tigris and the Euphrates, they constructed vast irrigation works which turned the whole land from a desolate waste into one huge garden. The whole plain was studded with prosperous and populous cities set in the midst of engirdling areas under wheat, for it is from this region that wheat, at first found in a wild and uncultivated state, was taken, and gradually transplanted all over the world.

"In those days the land was protected against the inundations of the rivers and watered in seasons of drought by a stupendous system of dikes and canals, which at the present day, in a ruined and sand-choked condition, cover like a network the face of the country. Once the crown of the possessions of the powers which swayed the East, is now a barren waste. The irrigation works of the ancients perished because the country was so torn asunder by strife that they ceased to keep them in repair. The scene of the sudden destruction which overwhelmed the cities of the plain is still visible. The river Tigris burst its bonds and temporarily engulfed a great area, and from that day to this desolation reigns supreme around ancient Opis.

"But modern influences are at work. It is said that Sir William Willcocks, the engineering and irrigation expert, desires to bring back these regions to cultivation. He wants to make them once more a huge granary as of old, and to that beneficent work he seeks to devote the remainder of his life. His two principal projects are estimated to cost respectively $20,000,000 and $17,000,000, his calculations showing a probable return on the outlay of from 16 to 19 per cent. The schemes are feasible enough from the point of view of the irrigation engineer. The waters of the Tigris contain a greater percentage of life-giving silt than the Nile, and no region is said to be more favored by nature for the production of cereals than these. Bagdad is the center of the area which it is proposed to irrigate."

COMPARATIVE PRICES OF 107 COMMODITIES.

Quotations ruling for standard grades at the low point in 1896, the succeeding high point in 1900, the succeeding low point in 1901, and the generally high records reached since then:

WITH one ribbon and its new three-color device

The New Tri-Chrome Smith Premier Typewriter

is virtually three typewriters in one. It produces indelible black, purple copying or red typewriting at the will of the operator. One ribbon and a small, easily operated lever do it all.

This machine permits not only the use of a three-color ribbon, but also of a two-color or single color ribbon. No extra cost for this new model

BRADSTREET'S

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY.

Henry E. Dunn, President; Charles L. Beckwith, Secretary; Charles M. Clark, Treasurer.

NOS. 346 AND 348 BROADWAY, NEW YORK.

Berlin, 23 Charlotten-Strasse.
London, 137 Cheapside, E. C.
Melbourne, 231 Flinders Lane.
Paris, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE.
Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JULY 20, 1907.

There has been since our last writing a very marked subsidence of the talk of war between Japan and the United States. In a statement issued from Oyster Bay the President, referring to the interview with his guest, Admiral Baron Yamamoto, said that it simply confirmed, what had already been made clear by Viscount Aoki, the thoroughly good understanding between the two governments and the fundamental friendliness between the two nations. The Japanese ambassador the following day said that he was tired of giving assurances of the friendliness of his country for the United States, and added emphatically that there was no misunderstanding and that there was no "Japanese situation." Advices from Tokio indicate that confidence in the continuance of friendly relations is not disturbed there, as may be gathered from the fact that there has been within the week an activity in the share market at Tokio to which it had been a stranger for some months. It is not without interest at this point to note that the directors of the Merchants' Exchange of San Francisco on Thursday announced that they did not favor any immigration law that would discriminate against the people of Japan or would permit them to be treated differently from the people of any other foreign country. The State Department, it may be remarked, has just established a special bureau to have charge of our relations with the Far East, and has placed it under the direction of men who are not only familiar with conditions in Japan and China, but also read and speak the languages of those countries.

Easier conditions prevail in the loan market, the tendency, as is customary at this period, being for money to return from the interior to New York, while the Treasury's payments are also running ahead of its receipts. These circumstances are reflected by quotations of 3 per cent. or less for call money and by concessions in the quotations for short-time loans. It is observed, however, that collateral loans running for six months or more still command 6 per cent. and that lenders show no disposition to put out funds in that way at lower quotations. In fact, there is a general agreement on the idea that by the middle of August, at the furthest, the demands for funds for the west and south will have attained such proportions that money rates will advance and that the autumn will witness a decidedly higher loan market. The point has been raised that interior banks especially, particularly those at the west, are exceptionally well supplied with funds, and that the demands on the eastern cities for crop-moving purposes will be correspondingly modified. The experience of recent years, under parallel conditions, does not offer much ground for reliance on the ability of the agricultural sections to finance the crop movement themselves, and the idea entertained in Wall street that the money market is now experiencing only temporary ease would seem to be well grounded.

Doubtless the disclosure of a large surplus as the result of the year's Treasury operations has had its influence in directing attention anew to the subject of tariff revision, which has been discussed more or less during the last few years within the ranks of the present majority party in the nation. The general sentiment has seemed to be that any discussion of revision as a practical policy would be postponed until after the next presidential election at least. This view of the matter has apparently been strengthened as the result of some expressions elicited at Oyster Bay this week, where the matter was discussed by President Roosevelt with Senator Hopkins, of Illinois, and others interested in the general subject. This was to be expected. The treatment of the questions involved in a revision of the tariff is never free from difficulty, and entrance upon a matter of that kind in the period immediately preceding a presidential election is a course that does not commend itself to seasoned politicians.

Interest in the Newfoundland fishery question is renewed owing to the approach of the new herring fishing season, which finds the governments of Great Britain and the United States without a new modus vivendi for the coming year, the agreement entered into last year expiring with the close of the fishing season and no other having yet been arranged to take its place. A couple of weeks ago it was announced that the negotiations looking to a new modus vivendi had reached a deadlock owing to the inability of the British Cabinet under existing legislation to enforce a suggested clause preventing the Newfoundland authorities from serving legal process aboard American vessels. The Newfoundland authorities have thus far, with apparent success, insisted upon their right to legislate locally for the fisheries so long as they do not in terms discriminate against citizens of the United States, holding that in so doing they are not infringing any treaty rights of such persons. The suggestion was made early this week that the British government, which formerly opposed Premier Bond's recommendation that the matter be referred to arbitration, has lately leaned to that view of the matter. The State Department at Washington does not appear, however, to be reliably informed as to this change of view, and it is exerting its efforts to secure the adoption of some agreement which will operate to prevent friction for the fishing season now about to open.

Among a number of recently enacted laws directed against trusts and corporations in Texas is one which provides that any person who acts as agent of a trust or combination to destroy competition, or any person who sells goods made by such a concern, shall be guilty of a felony and punishable upon conviction by imprisonment for a term of from two to ten years. This particular piece of legislation has not unnaturally aroused widespread antagonism among the business men of the state, many of whom sell goods made by concerns which may be declared to be combinations as the result of the widespread prosecutions which it is announced the attorney-general of the state is preparing to initiate. Advices from Texas indicate that meetings are being held throughout the state by commercial organizations and business men generally to protest against the enforcement of the law. As a result, it is understood that the governor will be urged to call a special session of the legislature to repeal or modify this particular law, whose enactment will, it is declared, have the effect of throttling trade.

Something like a clash on the question of jurisdiction seems to have arisen out of the railway litigation in North Carolina, one incident of which we referred to last week in noting Judge Pritchard's injunction decree in the federal court at Asheville, in that state. On Saturday last the same judge issued a restraining order prohibiting the prosecution of suits begun by certain residents of Randolph county in that state to recover penalties against railroad companies under the reduced rate law passed by the legislature at its recent session. On the same day the grand jury of Wake county found indictments against a ticket agent of the Southern Railway for charging a higher rate than 2¼ cents per mile for passenger fares. This action is understood to have been taken under the instructions of the state judge presiding in the Superior Court at Raleigh. Additional indictments on the same ground were found against other railway ticket agents on Monday, and on the same day the governor of the state issued a statement declaring that Judge Pritchard was in error in granting the injunction above referred to before finding that the act of the legislature was unconstitutional and confiscatory.

The average observer of current events in America is aware how badly San Francisco's affairs were unsettled because of the culpability of a former city administration, whose misdoings have been pretty well aired in the courts of that city. Happily, however, a change has taken place in the city government, Dr. Edward R. Taylor, physician and lawyer, dean of the Hastings Law College and of the University of California, having been elected on Tuesday mayor of the city by the Board of Supervisors. Indeed, the event itself has already had a salutory influence, for a dispatch to this paper indicates that the merchants of the city by the Golden Gate are now more optimistic, trade has improved, and building projects that have been deferred for some time will again be undertaken with vigor. We have no doubt that the new state of things will work for the maintenance of orderly conditions, without which no community can thrive.

Events in Korea have been for some time moving toward a crisis, the culmination of which came yesterday in the abdication of the reigning monarch, Yi-Hyeung, who succeeded his predecessor forty-three years ago. This monarch, who assumed the title of Emperor ten years ago, has been succeeded by the Crown Prince. The change has been brought about in large part by pressure from Japan, which has attained a predominant influence in the affairs of the Hermit Kingdom—an influence which has been recognized in a series of agreements between the two countries, and was formally acknowledged by Russia in the treaty signed at Portsmouth. In one of those agreements, signed in November, 1905, it was provided that Japan should control the foreign relations of Korea, and the sending of a delegation to the Peace Conference at The Hague was regarded by Japan as a breach of this treaty for which it held the Emperor responsible. The demand for his abdication was made by the Korean Cabinet, but the Japanese Resident-General and the Foreign Minister of the Island Empire were interested if silent spectators of the event.

POSSIBLE RESULTS AT THE HAGUE.

The Hague Conference may be said to have passed recently through a stage of pessimistic feeling. The admonitory words of the president at the opening did something to bring about such a feeling, and the preliminary discussions had in committee during the five weeks that have elapsed since the formal opening of the conference have not unnaturally seemed to disclose more points of disagreement than of concord among the delegates. This is not an unusual experience in such gatherings. Convening under the spell of humanitarian enthusiasm, the hopes of those engaged are at first lifted, perhaps, unduly high, and then follows a period when the difficulty of reconciling opposing interests and ideas seems for a time to darken counsel and to weigh upon the resourcefulness of the leaders. There comes, however, a time when some man or men with intelligence more alert or comprehensive than the rest seize the moment to secure whatever results of value, if any, are to be derived from the mass of varying proposals.

It would perhaps be premature to say that this stage has been reached in the proceedings in progress at The Hague. There are, however, indications of a realization of the fact that, under the conditions hedging about the work of the conference, the abiding results to be secured must be of a limited nature, and that the presentation of propositions must be timed and framed with a due regard to that idea. As an illustration of an effective method of presenting a proposition under present circumstances, it may not be amiss to notice the address in which General Horace Porter this week presented on behalf of the United States delegation the proposition against the employment of force in the collection of contractual debts. General Porter explained that the proposition referred solely to contractual debts and did not cover cases of injury to resident aliens caused by unjust imprisonment, mob violence, confiscation of property and conditions of a like nature, on account of which indemnity might be demanded. He declared that there was a growing impression that the employment of armed force to collect debts would be a most fruitful source of war, while if the so-called peaceful blockade were employed there would be an increasing disposition on the part of neutral commercial nations not to recognize such blockade.

Statistics covering the last sixty years were adduced by the American delegate to show that in the case of thirteen large claims for damages, unpaid debts, etc., the largest sum allowed was only 80 per cent. of the claim, while in some cases it fell to the ridiculous sum of 3¼ per cent. Such examples shou'd, he said, deter civilized nations from resorting to force for the collection of debts not previously adjudicated by an impartial tribunal. He cited the opinions of leading American and English statesmen against the employment of coercive measures, and said that non-intervention would be of incalculable benefit to all the parties concerned—first, to the creditor nations as a warning against a class of persons too apt to trade on the necessity of feeble or embarrassed governments; second, to neutral nations whose commerce would not be interrupted, and third, to the debtor states, as it would be an announcement to money lenders that they must base their operations solely upon the considerations of good faith or the government's national credit and justness of administration. Under such circumstances, he added, responsible financial men would be more likely to negotiate loans on fair and reasonable terms.

What will be the fate of this particular American proposition cannot, of course, be determined at this writing. It will not escape attention that Venezuela presented an amendment prohibiting the use of force even after arbitration, and it is known that the delegates from several of the Latin-American countries oppose the American plan, though under instructions from their governments they may vote in favor of it. The American delegates, however, seem hopeful of the outcome, and they appear to be encouraged by the reception accorded to other of their proposals, such as those relating to bombardments, the use of explosive bullets, the immunity of private property at sea, and the establishment of a permanent court of arbitration. It is understood, indeed, that in the near future the United States delegates will present a plan for making the conference itself a permanent institution in accordance with ideas long entertained.

There are indications that from this time forth it will be possible to record some more definite results than have heretofore been offered to the chronicler. It may be noted that the committee on maritime warfare, on Tuesday this week, after some discussion, approved the draft of a convention providing for the adaptation of the Red Cross regulations to war at sea. On the following day the committee having the matter under consideration gave a majority vote in favor of the American principle regarding the immunity of private property at sea. In the sub-committee dealing with the preliminaries of war it was decided by a large majority that a declaration of war should precede the opening of hostilities, and the proposition that notice of an outbreak of war should be given to the neutral powers was also approved. Something of a fillip was given to the proceedings on Tuesday by the announcement that at the next plenary sitting of the conference Great Britain would present a proposal regarding the limitation of armaments. The precise text of this proposal has not yet been disclosed, but it is reported to be in substance a repetition of the resolution adopted by the conference of 1899 upon the motion of M. Bourgeois, though somewhat more urgent in terms.

RAILWAY GROSS AND NET EARNINGS.

Railway earnings, gross and net, are still advancing. Thus the latest returns, those for May, show that results in that month were better than they were in April, at least as regards volume, but the ratios of increase were not quite so large. As compared with May, 1906, the increase in gross earnings amounts to 19.3 per cent. on a total of $137,309,307, while the gain in net receipts figures out at 17.5 per cent., the total being $41,789,038. Operating expenses are still very heavy, the advance in May last, as contrasted with the returns for May, 1906, being no less than 20.1 per cent. This item, however, shows a little improvement, for in April the increase in operating expenses, as compared with the corresponding figures in 1906, was 22.8 per cent. Indeed, it is the expense account that will have to be reckoned with in future months, particularly if a shrinkage in gross earnings occurs. Now, while results for May were of a favorable character, the fact is that comparison is made with a rather unsettled period in 1906. We refer to the widespread suspension of work by the soft-coal miners, as a result of which gross earnings on many of the leading roads were much reduced. Full weight should be given to that fact when analyzing the returns for May. Forthcoming reports, which will compare with a normal basis in 1906, will furnish a better idea of actual operating conditions and their bearing on railway net earnings. However, the present report shows that the increase of 19.3 per cent. in gross earnings follows one of 9.3 per cent. in May, 1906, while the increase in net earnings for May this year—17.5 per cent.—compares with one of 11.8 per cent. for May, 1906. The general results in May are summarized in the following:

	1907	1906	*Inc.*	*P. ct.*
Gross earnings.	$137,309,307	$115,072,402	$22,236,905	19.3
Op. expenses...	95,520,269	79,523,557	15,996,712	20.1
Net earnings.	41,789,038	35,548,845	6,240,193	17.5

This table gives gross earnings for May, 1907 and 1906, in group form:

	1907	1906	*Inc., per ct.*
Northwestern	$9,834,549	$7,787,210	26.2
Central-western	11,519,263	9,757,410	18.0
Trunk lines	33,543,059	28,590,319	17.3
Eastern	3,164,457	2,440,719	29.6
Coal roads	12,019,672	9,392,850	27.9
Southern	22,483,325	20,856,252	7.8
Southwestern	19,074,408	15,544,740	22.7
Pacific	25,670,574	20,702,902	23.9
Total	137,309,307	115,072,402	19.3

Gains, except in the case of the southern group, are very large. Thus the eastern roads show an advance of 29.6 per cent. and the hard-coal roads one of 27.9 per cent., while three other divisions—the northwestern, Pacific and southwestern—contribute gains, each of which is in excess of 20 per cent. The central-western roads and trunk lines furnish increases of 18 per cent. and 17.3 per cent. respectively. The southern roads contribute an increase of 7.8 per cent.

In the subjoined table we give the returns of net earnings for May by divisions:

	1907	1906	*Inc., per ct.*
Northwestern	$2,768,882	$2,140,878	29.3
Central-western	3,274,989	2,321,958	41.0
Trunk lines	10,121,569	8,932,676	13.3
Eastern	972,657	670,184	45.0
Coal roads	4,685,529	3,228,363	45.1
Southern	5,022,935	5,482,119	*8.3
Southwestern	6,358,138	5,060,348	25.6
Pacific	8,584,339	7,712,319	11.3
Total	41,789,038	35,548,845	17.5

* Decrease.

Gains are large in most cases, three groups—the hard-coal roads, the eastern and central-western—reporting increases in excess of 40 per cent. The northwestern roads furnish an increase of 29.3 per cent. and the southwestern display an increment of 25.6 per cent. The trunk lines have a gain of 13.3 per cent., while the Pacific roads contribute an accretion of 11.3 per cent. The southern group furnishes the exception to the rule, showing a loss of 8.3 per cent., which is largely accounted for by losses reported by the Atlantic Coast Line and Louisville & Nashville—$366,495 and $102,647 respectively.

The swings in gross and net earnings for seventeen months back are shown in the following table:

	Per cent. inc. Gross	Net
	1907	1907
January	8.2	*2.4
February	7 7	*5.9
March	10 2	*0.2
April	23.6	25.5
May	19.3	17.5
	1906	1906
January	20.3	44.0
February	26.8	70.9
March	12.0	14.0
April	5.2	4.3
May	9.3	11.8
June	11.0	13.0
July	13.1	17.1
August	12.5	11.9
September	8.0	5.0
October	11.3	9.7
November	7.2	3.2
December	8.9	2.0

* Decrease.

The principal changes in net earnings for the month of May, compared with the corresponding month last year, are as follows:

INCREASES.	
Pennsylvania, east of Pittsburgh and Erie	$560,000
Reading	483,163
Central Railroad of New Jersey	452,924
Lehigh Valley	451,089
St. Louis & San Francisco	418,950
Union Pacific	371,779
Atchison	358,522
Buffalo, Rochester & Pittsburgh	334,932
Canadian Pacific	331,695
Illinois Central	293,847
Pennsylvania, west of Pittsburgh and Erie	286,200
Erie	265,837
Missouri, Kansas & Texas	246,106
Southern Railway	190,311
Chicago & Alton	189,838
Minneapolis, St. Paul & Sault Ste. Marie	182,491
Baltimore & Ohio	162,495
Southern Pacific	158,154
Rock Island	157,336
Canadian Northern	145,600
Toledo & Ohio Central	142,219
Grand Trunk of Canada	134,802
Hocking Valley	116,208
Colorado & Southern	110,505
Pittsburgh, Cincinnati, Chicago & St. Louis	107,125
Wheeling & Lake Erie	104,292
Kansas City Southern	102,693
DECREASES.	
Atlantic Coast Line	$366,495
Louisville & Nashville	102,647

As illustrating the effect of operating expenses, one example may be cited. Thus, while gross earnings of the Pennsylvania lines east of Pittsburgh and Erie increased $2,673,200, net advanced only $560,000. On the lines east and west of Pittsburgh the increase in gross receipts was $3,988,300, yet the gain in net amounted to only $846,000.

THE INTERSTATE COMMISSION ON THE HARRIMAN SYSTEM.

Much curiosity was manifested regarding the nature of the report which the Interstate Commerce Commission would make on its investigation of the position and finances of the Union Pacific, Southern Pacific, Chicago & Alton and other railways, commonly known as the Harriman system. In fact, there was not a little real anxiety in financial circles lest the commission's findings should be of a radical description and even suggest the civil or criminal prosecution of the financiers who engineered the combinations which were the subject of the inquiry. The fact that Mr. Kellogg, the special counsel engaged in the investigation, in his argument summing up the testimony, adopted a very severe tone regarding the operations of the capitalists identified with the Union Pacific, furnished more or less ground for the presumption that the commission itself would take a similar attitude. Later on, however, a less apprehensive feeling seemed to prevail as to the outcome in this respect, it being understood that the commissioners were inclined to take a moderate position and that their report would be a conservative one.

This last view has proved to be correct in the main. The report which was adopted unanimously by the commission, and which was made public at the commencement of the present week, is in no sense a radical document. Even its wording is studiously moderate, the harshest language employed being the use of the words "indefensible financing" in connection with the exploitation of the Chicago & Alton property. There is no hint of criminal prosecutions of individuals, or even of civil suits to break up the control the Union Pacific exercises over the Southern Pacific or other lines, and it might be remarked that as regards the principal financier involved, Chairman Knapp has been quoted in an interview as saying that Mr. Harriman secured immunity by testifying before the commission. Wall street, in fact, seems to have breathed more freely since it read the document, and in that quarter it has been regarded as an indication that the policy of the federal authorities toward the railroads and combinations of such corporations will be guided by a greater inclination to avoid indiscriminate and unfruitful attacks upon such interests.

At the same time the report does not in any sense lack vigor. It constitutes, in fact, a forcible and dignified arraignment of methods such as those which have been pursued by the capitalists identified with the Union Pacific. It declares that the tendency of the operations conducted by E. H. Harriman and his associates is to eliminate competition, and that their policy and methods are objectionable and should be suppressed in the future by statutory regulation. Taking up the different properties which were the objects of the investigation, it is stated that the effect of control of the Southern Pacific by the Union Pacific has been to unify their management and eliminate competition between them in transcontinental business and in traffic to and from oriental ports. The elimination of the San Pedro line as an independent property is also described, and the ownership of a substantial interest in the Atchison stock by the Union Pacific, as well as by individuals connected with it, is characterized as a conspicuous illustration of the theory of community of interests and harmony of management, while, in reference to the Alton, the management is practically arraigned for stock-watering and payment of unearned dividends.

In formulating its recommendations the commission takes the ground that the functions of railroads should be confined to furnishing transportation, and that they should not be permitted to invest generally in the securities of other railway or steamship companies except those of connecting lines, branches and feeders. It also holds it to be contrary to public policy, as well as unlawful, for railways to acquire control of parallel and competing lines, and sets forth that even where the stock acquired does not involve a controlling interest, it nevertheless, if accompanied by representation on the board of such railway, tends to diminish competition and lessens its effectiveness. In conclusion the commission urges that the time has come when some reasonable regulation should be imposed upon the issuance of securities by railways engaged in interstate commerce. Acknowledging the fact that money invested in new enterprises must secure the advantage of a large return, it holds that established railway systems should be prevented from inflating their securities for merely speculative purposes. The commission, in short, sets its stamp of disapproval upon the conversion of railway companies into holding corporations, although it does so in a rational way, pointing out the grievances which are susceptible of remedies in a manner which produces a much greater impression than if it had indulged in violent attacks upon the corporations and individuals involved in their affairs.

NEW HIGH RECORDS IN FOREIGN TRADE.

Reversing the tendency noted for some months past, exports in June gained slightly over those of May—2.2 per cent., in fact—whereas imports fell off 11 per cent. from May. Still, with all this, the imports for the last month of the fiscal year gained 12 per cent. over those of June a year ago, while exports gained 10 per cent. The results for the fiscal year as a whole are naturally little different from what were outlined in these columns a short while ago. Imports and exports alike have broken all records, the greatest expansion having been in imports, which gained 16.9 per cent., while exports increased 8.9 per cent., or only about half the proportionate gain in imports over the records of 1906, themselves notable milestones on the road of American foreign trade. The total trade for the year aggregated $3,315,252,116, a gain of 11.6 per cent. over 1906.

Following will be found the imports and exports for the fiscal year ending June 30, 1907, with comparisons for the preceding nine years:

Year ending June 30	*Exports*	*Imports*	*Excess of exports*
1907	$1,880,851,024	$1,434,401,092	$446,449,932
1906	1,743,864,500	1,226,562,446	517,302,054
1905	1,518,561,666	1,117,513,071	401,048,595
1904	1,460,827,271	991,087,371	469,739,900
1903	1,420,141,679	1,025,719,237	394,422,442
1902	1,381,719,401	903,320,948	478,398,453
1901	1,487,764,991	823,172,165	664,592,826
1900	1,394,483,082	849,941,184	544,541,898
1899	1,227,023,302	697,148,489	529,874,813
1898	1,231,482,330	616,049,654	615,432,676

There is here shown a gain in exports from the first year of the decade to the last of 52 per cent., while imports have gained 132 per cent. In other words, exports have gained by about one-half, while imports are one and a third times larger. The division into classes of imports and exports follows:

Year ending June	1905	1906	1907
Imports—Free of duty	$517,442,302	$549,623,878	$543,992,000
Dutiable	600,070,769	676,938,568	790,409,092
Total	1,117,513,071	1,226,562,446	1,434,401,092
Exports—Domestic	1,491,744,641	1,717,953,382	1,854,712,183
Foreign	26,817,025	25,911,118	26,138,841
Total	1,518,561,666	1,743,864,500	1,880,851,024

The movement of specie and bullion in the past year compares with that in the preceding two years as follows:

Year ending June	1905	1906	1907
Gold—Imports	$53,648,961	$96,221,730	$114,485,676
Exports	92,594,024	38,573,591	51,399,176
Excess of imports	....	57,648,139	63,086,500
Excess of exports	38,945,063	....	....
Silver—Imports	27,484,865	44,442,540	42,918,790
Exports	48,848,812	65,869,063	56,739,073
Excess of exports	21,363,947	21,426,523	13,820,283

DIVERGENT VIEWS ON MUNICIPAL OWNERSHIP.

Judging by the abstracts of the reports that have been made public, the investigations conducted by the National Civic Federation's Commission on Municipal Ownership have given ground for some differences of opinion. For example, of a committee of four appointed by the commission to summarize the results of the American investigations, two, Messrs. Walton Clark, of Philadelphia, and Charles L. Edgar, of Boston, hold to the view that where municipal ownership has been removed from the realm of philosophic discussion and put to the test of actual experience, it has failed ingloriously. They believe, too, that there would be grave danger of the building up of a municipal machine which would surpass anything ever before effected in that line if the men now in the employ of street railroad, gas and electric companies were made city employees. Prof. Frank Parsons, of Boston, and Edward W. Bemis, of Cleveland, on the other hand, generally commend the experiments made in municipal ownership, holding that the failures therein are insignificant in comparison with the failures of private ownership. They believe that the former system would tend to develop a higher class of municipal administrators. This view is not entertained by their colleagues already mentioned, who hold that there is little about municipal trading to attract men of the first class, and declare that they found no evidence that the personnel of citizenship or of the administrative bodies was rendered higher by the adoption of the policy of municipal ownership. Messrs. Clark and Edgar express the opinion that with one or two exceptions all municipal plants properly audited have lost money, while Professor Parsons says that, broadly speaking, municipal plants tend to make lower prices to ordinary consumers than private plants in the same country working under similar conditions, while in the comparatively few cases where municipal sys-

* 1907 figures preliminary. Preceding years actual.

The features brought out in the table of leading exports above given for 1907 are the decreases shown in exports of breadstuffs, provisions and mineral oils, of respectively 5, 18 and 6 per cent., while cotton gains 20 per cent. as compared with the preceding fiscal year. In other words, the large gain in cotton, just about $80,000,000, has more than offset losses, aggregating $60,000,000, in exports of breadstuffs, provisions, animals and oils, allowing of a net gain of about $20,000,000 in the aggregate of leading domestic exports. Against this slight increase is to be set a gain of $117,000,000 in other domestic exports, the bulk of which must be credited to exports of manufactures. It is, in fact, this feature which has enabled exports as a whole to show the large gain of $137,000,000 over the fiscal year 1906.

The figures of cereal exports for the fiscal year, given in detail herewith, while showing a gain over recently preceding years, point to cross currents in this branch of foreign trade which deserve notice. Thus, wheat and wheat-flour exports were larger than for any year since 1903, but failed to justify expectations, based upon the large crop of 1906, of a close-to-record export. On the other hand, corn exports fell off, which also looks odd in view of the immense estimates of last year's crops. These figures would seem to point to new conditions, particularly the coming into the market of rivals in North and South America, as opening a new chapter in the history of cereal exports from the United States.

* Preliminary. Actual probably $185,000,000.

tems do not make low charges, the benefits that under private operation go to the stockholders, for the profits of the public plants are used to improve the service, relieve taxation or accomplish some other public purpose.

There is a divergence of views likewise in the reports upon labor as related to municipal ownership. In one of these reports Professor Commons of Wisconsin University expresses opinions in many respects favorable to public ownership, though he finds that the proper method of dealing with employees is the most difficult and critical problem to be dealt with under such a system. He favors the recognition of organized labor as a safeguard against outside recommendations, declaring that wherever the investigators have found a class of employees organized and dealt with as such through their representatives, they have found those positions exempt from politics. Mr. Sullivan, on the other hand, declares that in America the municipalized enterprises visited by the labor investigators have been rich mines for significant facts relating to politics rather than to labor, and that those facts are not usually among those heretofore emphasized by the American advocates of municipal ownership. Testimony as to political rottenness has been found, he says, in cities whose municipal plants were selected as models by representative municipalizers on the commission.

EDITORIAL NOTES.

British railway earnings are increasing, those for the first half of the year 1907—seventeen leading lines reported—aggregating £46,844,000, of which passenger business contributed £19,781,000 and freight business £27,063,000, gains of respectively 2.98, 1.1 and 4.36 per cent. over the like totals of the first half of 1906. It is noted, as explaining the large gain in freight earnings, that the lines serving the manufacturing and colliery districts have been especially successful in adding to their traffic. It might be noted that all the gains shown in the first half of the present year followed even larger gains in 1906 over 1905, and gains are, in fact, shown in all classes of earnings progressively since 1901. From the latter year to 1905 growth was slow, the Boer war and its after effects being a deterrent, but 1906 showed a large gain, and the 1907 showing is an increase over that.

Justification has been given by the developments of the last few days to those who believed that the reduction in the selling prices for copper announced last week was only the commencement of a decided downward movement in the market value of the metal. According to the best accounts, it would seem that the volume of business which was done at 22@23 cents per pound, the figures established by the large sellers about ten days ago, was comparatively small. The larger consumers of copper, in fact, seem to have maintained their waiting attitude and allowed their stocks on hand to run down still further, rather than to replenish them at cut prices. This action, together with the weakness of the European copper markets, would amply explain the renewed declines which have been seen this week, and which carried down the prices for lake and electrolytic copper to 22 and 21 cents per pound respectively. Even this further drop does not seem, however, to have brought in very large buying orders, and it is, in fact, stated that the large consumers in the Naugatuck valley of Connecticut are still holding off, being under the evident impression that the metal will have to go still lower before a steady basis as to prices is reached. There seemed, in fact, to be a general opinion among consumers and others identified with the copper trade that the price of the metal may have to go to around 18 cents per pound before the manufacturers will indulge in any free stocking up. Thursday's announcement that the Amalgamated Copper Company had declared a regular dividend of 2 per cent. quarterly, and the accompanying intimations that some large orders for the metal had been placed at the last reduction in prices, were, however, calculated to create some modification of such ideas.

A remarkable state of affairs seems to exist in connection with the management and finances of the American Steel Foundries Company. That organization passed some two years ago into the hands of a new management, under which its earnings have shown a steady increase. In the fiscal year ending July 31, 1906, the company earned net profits of $1,596,000, with a surplus over interest, sinking funds and depreciation of about $1,000,000, while for the fiscal year drawing to a close, it is asserted on what is understood to be good authority, that the net earnings of the concern will amount to $2,500,000. There has, accordingly, been some inquiry among the holders of the $17,242,000 of 6 per cent. cumulative preferred stock as to the absence of dividend payments thereon when the company's financial condition is apparently so flourishing. It seems, however, that a very remarkable contract was entered into between the directors and the present management when the latter was installed. Under this arrangement the four principal executive officials, it is alleged, were to receive, in addition to their salaries, a bonus based upon the net profits of the company, the amount of such bonus to be 15 per cent. on net profits of $1,000,000, the percentage increasing up to 33 per cent. on an aggregate of $2,000,000. The minority stockholders, who have but recently had this matter brought to their attention, are now moving to test the question whether the contract for the payment of the bonuses, which has three years more to run, is justifiable in law, and also whether they are entitled to an immediate disposition of profits in the form of dividends.

Considerable light has been thrown upon the recent financial and commercial crisis at Alexandria, Egypt, which involves failures of no small proportions, and has necessitated the shipment of considerable gold from Europe to the city in question. The matter has been summed up by one of the principal financial officials of the Egyptian administration, who is quoted as saying, "We have been working far above our means by using capital which was not ours." In addition to this it is pointed out that Egypt, owing to the great irrigation works which have been constructed under the British control, has experienced a great expansion in its agricultural and general industries, and there has also been a very large speculation in lands. On the other hand, the mechanism of credit in the country is as yet imperfectly developed. The state bank, it seems, has only restricted powers as to note issues, and does not hold a reserve of gold sufficient to give it a commanding position in the Egyptian money market, which is, in fact, under the control of branch institutions of European banks, which do the bulk of the banking for the country. At the same time, as is set forth in a recent article upon the Egyptian crisis in the London *Economist*, paper money is practically unknown there. In few countries is gold so important and money transactions through the intermediary of notes or checks so undeveloped. Another curious circumstance which is set forth by the writer of the article in question is that observers on the ground are unanimous in the opinion that large stocks of gold are hoarded by the native landed proprietors, a circumstance which constantly tends to restrict the amount of available circulating medium.

Compared with the requirements of other railway corporations for new capital with which to carry on improvement work and defray the cost of additional rolling-stock equipment, those of the Chesapeake & Ohio management seem modest. The railway company in question has during the past week asked its stockholders to ratify, at a special meeting to be held at the end of the month, a new mortgage which will secure an issue of $10,000,000 5 per cent. bonds, maturing in ten years. The importance of this action is noted in the explanation which the company's board of directors has seen fit to put forth in connection with its appeal to the stockholders of the road to approve of the proposed bond issue. The circular issued in this connection sets forth in clear terms the necessity under which the corporation rests of providing additional facilities in order to provide for the constant increase of its traffic, and to utilize the same in respect to economical management and a proportionate increase in profits. It, however, states that the management, on due consideration, concluded that under existing financial conditions a long-term mortgage securing a large amount of bonds would be inadvisable. The amount which will be secured by the sale of the $10,000,000 of short-term 5 per cent. bonds will, it is stated, meet the present requirements of the company, and will leave room for the formulation of a comprehensive financial plan in the future whenever bond market conditions become more favorable.

As expected and predicted, the immigration totals for the fiscal year 1907 broke all records, the total number arriving in this country in that year being 1,285,349, as against 1,100,073 in 1906, a gain of fully 11 per cent. over that hitherto record year. Following will be found the immigration movement during the past decade:

Fiscal year		*Fiscal year*	
1907	1,285,349	1901	487,918
1906	1,100,073	1900	448,572
1905	1,026,499	1899	311,715
1904	812,879	1898	229,299
1903	857,046		
1902	648,743	Total	7,207,984

It will be seen that the number of immigrants in the past year was over 1,000,000 larger than the first year of the decade, and was just double the number arriving in the year 1902, five years ago. The greatest year in immigration previous to 1902 was 1882, when 788,992 immigrants arrived. It is also to be noted that the arrivals of immigrants in the past decade numbered 7,207,984, whereas in the decade just preceding 4,301,452 arrived; in the decade from 1878 to 1887 4,573,547 arrived, and in that from 1868 to 1877 only 2,917,450 arrived.

At this season of the year, when the question, "Where will I spend my vacation?" is uppermost in the minds of many, it is not amiss to point out that this country possesses many points of interest, and that a tour of the United States would prove profitable from an educational viewpoint. It is true that foreign travel has attractions, and that many persons, owing to limited time, cannot even consider a trip over sea; but there are vast numbers who think only of Europe for the vacation term. Many of these should ponder well the suggestion, "See America first." The old-world cities are of historic interest and their virtues have been well set forth by poets, but of up-to-date progress and evidences of the trend of affairs modern, our own country has countless examples. In addition, a transcontinental trip would unfold to the keen observer the immensity and variety of our resources, whether they be of the field or the mine. And if these things do not appeal to the person bent on spending a vacation in a profitable way, there remain variety of climate, changes of scenery, mountains, seaside resorts, waterfalls, lakes and rivers, and, in fact, all the beautiful gifts of nature. "See America first" is good advice.

Some details have been published this week concerning the plan to reorganize the Chicago traction properties. While the information on this subject is not definite nor final, there being a possibility that the arbitrators who have been constituted in the matter, Judge Grosscup and Professor Gray, may modify some of the provisions, the chances are that the security holders will welcome the solution which is now proposed for a problem involving many difficulties and complications. It is proposed to furnish the newly incorporated Chicago Railways Company, which will take over the properties embraced in the Chicago Union Traction Company, with a share capital of only $100,000, the entire amount to be held in trust to receive 45 per cent. of the net earnings of the company, to which it will be entitled under the reorganization ordinance, the other 55 per cent. going to the city. There will be put forth by the new organization an issue of bonds the proceeds of which are to be devoted to the rehabilitation of the properties, also notes to the probable amount of $10,000,000. In addition to this there will be some $23,000,000 of income-participation certificates entitled to payment of dividends if earned, in fixed proportions and in their respective order, the same to be exchanged for the shares of the present North Chicago Railway Company, the West Chicago Railroad Company, and the Chicago Union Traction common and preferred shares. In one way these announcements set at rest the idea that the stocks of the Chicago Union Traction Company will be wiped out or heavily assessed.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Municipality—Liability—Fire—Roller.

The Supreme Court of Michigan denied, in the case of Alberts vs. Muskegon, the liability of a municipality for the burning of property of an abutting owner by sparks from a defectively constructed and negligently managed roller with which its agents were repairing a street.

Corporators—Statement—Deceit—Liability.

The Supreme Court of Missouri held, in the case of Webb vs. Rockefeller, that deceit by corporators in falsely making a statement required by statute, that their articles of association should set out the amount of their capital stock and that it was actually paid in, did not render them liable to creditors on the ground that such statement was required as a condition to the right to do business and not for the purpose of procuring credit.

Officer—Money—Return—Interest.

The Supreme Court of Illinois held, in the case of Whittemore vs. The People, that where a state officer who had openly received money to which he was not entitled, following a custom of long standing in his office, had made no effort to conceal the fact and had thrown no obstacles in the way of a demand for its return, and no demand was made until the commencement of suit for its recovery, interest was allowable only from the date of the suit.

Lumber Cars—Fixing Standards.

The Supreme Court of Washington held, in the case of State ex rel. Washington Mill Company vs. Great Northern Railroad Company, that an attempt by the legislature arbitrarily to fix the weight of the standards of lumber cars, and to compel the carrier to deduct the weight so fixed from the weight of the lumber placed on the car and charge freight on the balance only, was void as constituting an unconstitutional interference with the carrier's property rights.

Agent—Purchaser—Compensation.

In a recently decided case it appeared that an agent under a contract with his principal was to receive all in excess of a stipulated price for which certain timber sold provided he obtained a purchaser for it. He found a purchaser at a price considerably in excess of the minimum price stipulated, but the principal sold the timber to him on different terms from those agreed upon in the contract. The Supreme Court of Texas held, in the case of McDonald vs. Cahlness, that the agent having procured the purchaser was entitled to recover on a quantum meruit although the principal had changed the terms of sale as provided in the contract.

Telegram—Delivery—Telephone—Liability

The Supreme Court of Georgia held, in the case of Planters' Cotton Oil Company vs. Western Union Telegraph Company, that proof that the plaintiff's agent in an attempt to deliver a telegraphic message for transmission used a telephone, calling upon the telephone company for a connection with the office of the telegraph company, and upon being assured by the person answering that it was the telegraph office, repeated to him the message intended to be sent, did not show that the message was in fact delivered for transmission so as to impose liability upon the telegraph company for failure to deliver it, where the agent of the plaintiff did not recognize the voice of the person who answered him as that of an agent of the telegraph company, or of anyone known to him, and it did not appear that such person was, in fact, an agent of the telegraph company.

Railroad—Nuisance—Contract—Evidence.

The Court of Appeals of the District of Columbia held, in the case of The New York Continental Jewell Filtration Company vs. Wynkoop, that where a private corporation having a contract with a railroad company for the construction of a tunnel, locates its power plant, concrete mixer, crushing machines and other appliances in such close proximity to private residences that smoke, dust, noxious gases, etc., emanating from the plant become a nuisance to the neighborhood and substantially injure the property and comfort of life of the occupants of such residences, the contractor is liable at the suit of a party injured thereby, and that in such case it is no defense to the contractor that the work was performed under a contract with the railroad company and was part of the work which the law authorized and required the railroad company to execute, nor that the contractor exercised due care to avoid unnecessary damage to the plaintiff and to the public, and that evidence offered for the purpose of showing these things is rightly excluded. The court further held that where the material evidence in such a case showed that the injuries to the plaintiff were caused by the plant and machinery of the defendant, although it appeared that the railroad company operated several locomotives in which it burned soft coal and which emitted smoke, a motion to direct a verdict for the defendant on the ground that the jury could not separate that portion of the damages caused by the operation of the defendant's plant from that caused by the railroad company was rightly refused.

Sale—Warranty—Breach—Note.

The Supreme Court of Kansas held, in the case of Burgess et al. vs. Alcorn, that in an action for the breach of warranty of personal property, where a note given for a part of the purchase price was otherwise a proper element of damages, it was not rendered incompetent for that purpose by the facts that it was non-negotiable and that the matters pleaded by the plaintiff would constitute a complete defense to an action upon it where the defendant had sold it, and made no offer to return it.

Insurance—Voluntary—Exposure.

The Supreme Court of Pennsylvania held, in the case of Rebman vs. General Accident Insurance Company, that a provision in an accident policy that it should not attach where death or disability resulted from voluntary exposure to unnecessary danger applied where the insured was injured by doing something voluntarily which ordinary prudence would forbid. In this case it was held that a man sixty years of age and with an umbrella under his arm, in attempting to get on a train running six or eight miles an hour, was guilty of voluntary exposure to unnecessary danger, relieving the insurance company from liability for his death resulting from the attempt.

Riparian Proprietor—Pollution—Injunction

The Supreme Judicial Court of Massachusetts held, in the case of Parker vs. American Woolen Company, that while a riparian proprietor is entitled to use the stream in such reasonable manner, according to the usages and wants of the community, as will not be inconsistent with a like use by other proprietors above and below him, he has no right to unreasonably pollute the waters by the discharge of noxious and deleterious substances therein which will tend to defile the water and make it unfit for domestic use. In this case it appeared that the defendant company discharged noxious substances from its mill into a stream. The court held that the plaintiff, a lower riparian proprietor, was entitled to an injunction to restrain the defendant from continuing to pollute the stream to such an extent as to noticeably or appreciably affect the purity of the water when it reached the plaintiff's premises, in order to prevent the defendant from gaining a prescriptive right, though the defendant's pollution did not interfere with any use of the water which plaintiff was making at the time suit was brought.

Contract—Pavements—Defects—Liability.

The case of McFarland et al. vs. The Barber Asphalt Paving Company, recently decided by the Court of Appeals of the District of Columbia, arose out of a paving contract between the commissioners of the District and an asphalt company. By its terms the contract required the contractor to keep the pavements in repair for five years, 10 per cent. of the contract price being retained as security for that purpose, and it further provided that no allowance would be made for any unusual difficulties arising either affecting the original construction or maintenance of finished work, and that if for any reason whatsoever the pavements should during said period of five years prove inferior to the best laid in the District prior to a given date, the contractor would on demand remove and relay the same. It appeared that by reason of moisture and the escape of illuminating gas from mains located under the street, the pavements became greatly out of repair before the expiration of the guarantee period, and on the refusal of the contractor to repair the same the work was done by the District and reimbursement for the cost sought out of the funds retained from the original contract price. The court held that under the terms of the contract the contractor was not relieved from liability for defects in the pavement caused by moisture and the escape of illuminating gas, and that on its refusal to repair the defects the District had the right to do the work and to be reimbursed the cost thereof out of the 10 per cent. retained as a guarantee fund.

BUSINESS NOTES.

Peace in the Anthracite Regions.

The following statement is authorized on behalf of the anthracite coal operators: The board of conciliation, created by the Strike Commission of 1902 to settle disputes between the anthracite coal miners and operators, has a clean docket. Not a single case is pending. During the four years of the commission's existence 159 differences between the coal operators and their employees have been settled. The board itself—composed of three representatives of the operators and three of the miners—has disposed of 132 of the cases, and an even division of the board has made it necessary to refer only twenty-seven cases to an umpire. Of these appeals, he sustained the complainant in only six cases. Experience gained in handling the complex questions involved has enabled the board to render its decisions with increasing promptness, and of the 159 cases presented forty-nine were disposed of within less than one month. Of the grievances considered, only one was presented by the United Mine Workers of America, as a body representing all the miners. Thirteen were presented by the operators and 146 by the miners. By the board's decisions twenty-nine cases were sustained, 115 not sustained or withdrawn, and fifteen settled "through the influence of the board."

Decrease in Building for Half Year.

Building operations for the first half of 1907 show a falling off of 13 per cent. in comparison with the corresponding period in 1906. Permits were taken out in thirty-four leading cities, according to official reports to *Construction News*, for 68,856 buildings, involving a total estimated cost of $264,861,223, during the half year just closed, against 69,338 buildings, aggregating in cost $303,663,752, for the same period a year ago, a decrease of 1,141 buildings and $41,307,433. The figures in detail are as follows:

	No. 1907	Cost, 1907	No. 1906	Cost, 1906	P. ct. gain
New York †	2,253	$64,256,618	3,225	$97,220,859	*34
Brooklyn	5,196	36,503,572	5,526	36,511,685	..

* Loss. † Includes Manhattan and Bronx.

New Blast-Furnace Capacity.

According to the *Iron Age*, "ten absolutely new blast furnaces, with an annual capacity of 1,340,000 gross tons, were blown in during the first half of this year; at least twenty-six absolutely new furnaces, with a capacity of 3,900,000 tons, are being built. This makes a record of additions to blast-furnace capacity which at no time in the past has been closely approached. Following are the annual capacities of new furnaces blown in during the past five half-years:

	Tons		Tons
First half, 1905	974,000	Second half, 1906	430,000
Second half, 1905	482,500	First half, 1907	1,340,000
First half, 1906	825,000		

Still greater results are to be accomplished in the next twelve months if present work is pushed to completion, since, excluding all projects about which there is any possibility of doubt, there are being built at the present time no less than twenty-six absolutely new blast furnaces, with an annual capacity of 3,900,000 tons, distributed as to class as follows:

	Number	Tons
United States Steel Corporation	15	2,320,000
Independent steel companies	9	1,330,000
Merchant iron makers	2	250,000
Total	26	3,900,000

If work is not interrupted, more than half, about 2,000,000 tons, of the new capacity will be blown in during the second half of 1907, while the great part of the balance should be blown in during the first half of 1908. If it is necessary for the new furnaces to make pig iron as soon as they can be completed, an estimate of probable pig-iron production can easily be made. To show the swing of production the following figures must be cited:

	Tons		Tons
1902	17,821,307	First half, 1905	11,163,175
1903	18,009,252	Second half, 1905	11,829,205
1904	16,497,033	First half, 1906	12,582,250
1905	22,992,380	Second half, 1906	12,724,941
1906	25,307,191		

Production in the first half of 1907 may be estimated at 13,500,000 tons, and the estimate for the second half favors 14,400,000 tons. This would give 28,000,000 tons for the calendar year 1907. Carrying the line farther, the furnaces completed by the end of this year could make a larger output, through full six months' operation, in the first half of next year, and allowing for additional new furnaces, the output in the first half of 1908 could readily exceed 15,000,000 tons. It is not likely that these latter outputs will be reached, but they could be if the pressure for iron during the last two years and a half should be continued. The best judges of the American iron trade have given up attempting to estimate its powers of expansion and recuperation. Some time the power of recuperation will be taxed, but a willingness to face that condition when it arises will be more profitable in the long run than a conservatism which would always avoid new erection."

Our Exports of Iron and Steel.

The following table, taken from the *Iron Trade Review*, gives, in gross tons for the United States and Great Britain, and in metric tons for the other countries named, the exports of iron and steel in the past three calendar years:

	1906	1905	1904
Great Britain	4,688,846	3,721,515	3,266,248
Germany	3,666,274	3,349,968	2,770,276
Belgium	1,131,120	1,060,998	912,623
France	643,562	749,905	720,141
Total	10,129,802	8,882,386	7,669,288
United States	1,325,157	1,010,255	1,167,678
Grand total	11,454,959	9,892,641	8,836,966

Other countries, including Russia, Austria-Hungary, Spain and Sweden, export some iron and steel, so that while the table above shows that five countries in 1906 exported 11,454,959 tons, of which the United States exports constituted 8.6 per cent., the percentage of all iron and steel exports contributed by the United States is less than 8.6 per cent.

Barley Production.

The Minneapolis correspondent of the *Wall Street Journal* says that it is believed there that the same general process that carried the center of flour production from Rochester, N. Y., westward to Minneapolis is working out in the malting trade. The center of flaxseed production, moving northwest, has made Minneapolis rank next only to Buffalo as a linseed-oil producer. The same thing is starting in the malting trade, because the center of barley production is tending north and west. New York, Buffalo, Milwaukee and other cities are the great malting centers. In 1905 the United States produced 136,000,000 bushels of barley, six states raising the big crops, as they do every year. These are California, Wisconsin, Minnesota, Iowa, North Dakota and South Dakota. In the following year the production went up to 178,000,000 bushels, and it is interesting to note what Wisconsin, which is tributary to Milwaukee, showed, and what that territory raised that is tributary to Minneapolis. The comparison follows (in bushels):

	1905	1906
Total crop	136,000,000	178,916,000
California	26,606,000	38,760,000
Wisconsin	14,742,000	22,349,000
	41,348,000	61,109,000
Minnesota	29,012,000	31,591,000
Iowa	11,661,000	15,734,000
North Dakota	19,326,000	15,815,000
South Dakota	9,962,000	22,910,000
	69,961,000	86,050,000

It will be seen that on a crop that increased its production by 42,000,000 bushels in 1906 over 1905, and in which the old producing states of California and Wisconsin had big crops, the increase in these two states was almost 20,000,000 bushels, while in the territory that Minneapolis might hope to draw from, the increase was a little over 16,000,000 bushels. Great variation appears every year in barley, but the feature last year was the wonderful increase in South Dakota. It is believed the production in Minneapolis territory this year will increase by 10,000,000 to 15,000,000 bushels.

CURRENT BUSINESS NEWS.

Commercial.

Broomhall, the well-known English authority on crops, has been traveling as a crop expert over the important grain countries of Europe. He says: "We are now facing one of the most extraordinary seasons with which the present generation of grain merchants has had to grapple, for with a steadily growing demand for breadstuffs throughout the old world and the Orient, and perhaps in the United States—for some authorities there claim that the rate of consumption has increased by a bushel per capita in the past four or five years—we are about to enter upon a period when the supply seems certain to be on a much smaller scale than we have had the past two years. European deficiency looks as if it would amount to at least 160,000,000 as compared with last year, or with the average production of the past two seasons. The deficiency in the Americas promises to be about 112,000,000 bushels as compared with last year, or 80,000,000 if compared with the average production of the two preceding years. Dealing with the whole crop of the world, the deficiency this year, compared with last, is 288,000,000, or compared with the average production of the past two years, it amounts to 248,000,000 bushels."

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—The weather is favorable, being fine and hot. The wheat plant, however, is backward. France—In the northwest and east the plant has large ears and appears very healthy, while elsewhere the outlook is fair, but the crop is late. Supplies are very small. Germany—The outlook for wheat is poor, rye fair, and oats on the whole satisfactory. Hungary—All reports confirm additional damage as a result of heat and rust. Roumania—The maximum yield for wheat will only be half a crop, with the quality good. Light rains have fallen, which were beneficial to corn. Bulgaria—The condition of wheat is semi-officially placed at 55 per cent., and corn at 58 per cent. The latter is questioned. Russia—In the southwest some damage is feared to spring wheat owing to the great heat, but a fair harvest is expected. The outlook for the winter crops is poor. In the southeast they are harvesting good crops, with the exception of some districts in the Azoff, which are poor. In the east the condition is less favorable owing to drought. Italy—Harvesting returns are satisfactory. Spain—Reports received are of a more satisfactory tenor, and no further deterioration is heard of.

A Bloomhall cable states that Argentina has an exportable surplus of 14,400,000 bushels, which, added to the 89,000,000 already cleared, would make a total of 103,000,000, which is slightly less than originally estimated. This leaves only about a half million per week until the new crop year.

The following are Mr. Sauerbeck's index numbers of the prices of forty-five British commodities, the average of the eleven years 1867-77 being 100:

	Average		*Monthly numbers*
1873-87	79	December, 1889	73.7
1887-96	63	February, 1895	60.0
1893-99	66	July, 1896	59.2
1897-1906	70	July, 1900	76.2
1883	82	December, 1901	68.4
1896	61	June, 1906	76.9
1900	75	December, 1906	79.7
1901	70	January, 1907	80.0
1902	69	February, 1907	80.7
1903	69	March, 1907	80.0
1904	70	April, 1907	80.7
1905	72	May, 1907	82.4
1906	77	June, 1907	82.0

The reduction of letter postage in France last year from 3 to 2 cents has not resulted in the augmentation of mailed letters expected, but has created an enormous deficit which has seriously raised the question as to the advisability of continuing the reform. The diminution in postal receipts from first-class mail matter for the first nine months under the new law is $4,457,280, to which must be added the increased cost of service, amounting to $871,720. The increase in the percentage of letters mailed under the reduced rate of postage was less than 10 per cent.

The weekly summary of weather conditions issued by the Weather Bureau says the general weather conditions of the week ended July 15 were favorable over most of the country. The drought prevailing at the close of the previous week in portions of Oklahoma, Missouri, Texas and Louisiana has been wholly, or in part, relieved, and portions of the lower Missouri and upper Mississippi valleys have experienced excessively heavy rains that caused damage in some places. Several local storms were more numerous than in any previous week of the season in the northern districts from the Missouri valley eastward, but the southern states were comparatively free from such storms. There was much cloudiness in Texas, the Missouri valley and middle Rocky mountain region; elsewhere there was the normal or more than the normal amount of sunshine.

The Solicitor of the Department of Agriculture on Monday certified to the Department of Justice forty-one cases of violation of the twenty-eight-hour law relating to the transportation of stock by railroads. It is estimated that the government will succeed during the next term of court in collecting possibly $250,000 in fines for violations of this law. Up to date the total collected is only about $14,000, but the department has now started upon a period of rigid enforcement of the act.

Following is the official Custom House statement of foreign commerce at the port of New York during the month ending June 30, 1907, compared with June, 1906:

	1906	1907
Gold and Silver		
Imports of gold—		
Foreign	$288,508	$400,880
Domestic	380,930	37,510
Imports of silver—		
Foreign	195,814	405,607
Domestic	6,612	9,508
Exports of gold—		
Foreign	None	191,172
Domestic	48,400	21,601,820
Exports of silver—		
Foreign	95,905	295,483
Domestic	3,952,866	3,598,190
Merchandise		
Imports entered for consumption, free	24,223,403	26,834,067
Imports entered for consumption, dutiable	27,254,468	31,451,412
Imports entered for warehouse	7,797,867	8,567,069
Withdrawals from warehouse for consumption	6,387,469	6,547,787
Exports—		
Domestic	48,288,304	54,556,849
Foreign, free	335,133	420,509
Foreign, dutiable	511,335	632,489
Duties		
Collected on direct importations	11,488,555	13,202,592
Collected on withdrawals from warehouse	4,031,365	4,012,086

The Department of Commerce and Labor, Bureau of Statistics, has issued the statement of the exports of domestic products for June. It is as follows:

	1907	1906
Breadstuffs	$13,420,580	$13,702,961
Meat and dairy products	15,043,182	15,377,807
Cattle, hogs and sheep	3,126,470	3,818,531
Cotton	12,177,964	18,174,398
Mineral oils	7,329,378	6,853,792
Total	51,097,574	51,626,989
Fiscal year—		
Breadstuffs	176,029,689	177,356,014
Meat and dairy products	180,938,765	191,069,064
Cattle, hogs and sheep	34,420,482	41,303,526
Cotton	481,166,011	400,427,014
Mineral oils	79,079,722	80,442,000
Total	951,634,669	890,597,618

The London *Statist* estimates the shortage in world's wheat crop at 416,000,000 bushels compared with last year and 232,000,000 bushels shortage compared with the average for the four preceding years. Beerbohm says the shortage is 400,000,000 bushels compared with last year and 240,000,000 bushels compared with 1905.

The reported area and production of tea in the various provinces of India during the last two years were as follows:

	1905 *Area, acres*	1905 *Product'n, pounds*	1906 *Area, acres*	1906 *Product'n, pounds*
Burmah	1,502	419,518	1,498	438,628
Assam	339,206	151,904,806	340,481	162,468,034
Bengal	136,153	53,570,740	134,566	60,134,577
Other parts of India	50,429	15,593,075	53,450	17,808,655
Total	527,290	221,488,139	529,995	240,849,894

The increase in the quantity produced has progressed much more rapidly than the increase in the area under cultivation, for, while the area has increased since 1885 by 86 per cent., the increase in production has been 236 per cent.

In reports made to President Seymour of the Alabama section of the Cotton Association, it is indicated that the cotton crop in Alabama, with average conditions from now on, will make 65 to 70 per cent. of a crop. With ideal conditions, 80 per cent. may be made.

The official Hungarian crop report makes the yield of wheat larger than expected—117,600,000 bushels, against 190,000,000 last year and 157,000,000 two years ago.

Financial.

The aggregate amount of stocks listed on the Stock Exchange during the first six months of 1907 was $432,609,630, against a total of $662,769,450 during the whole of 1906 and $533,434,900 in 1905. If the rate established in the first six months continues, the year's total will exceed $850,000,000, the largest since 1901, when it amounted to $1,642,013,715. This large amount was due to the listing of the stocks of the United States Steel Corporation, which totaled $1,018,688,000. The amount of bonds listed in the period of 1907 mentioned was $189,988,900, against $571,898,500 during the whole of 1906 and $980,026,650 in 1905. The very poor bond market of the present year, with sales far behind previous years, is in great part accountable for the small amount of listings. At the present rate of bond listings the year's total will be the smallest since 1897.

Nearly $2,000,000 short-time New York City revenue bonds have been marketed in France on a 4⅞ per cent. interest basis, it is announced. An effort was made to sell the bonds in Wall street, but 5 per cent. was the best interest rate that could be obtained in the local market.

Directors of the American Light & Traction Company have declared a quarterly dividend of 1½ per cent. on the common stock. This is at the rate of 6 per cent. per annum, and is an increase of 1 per cent. per annum over the dividends heretofore declared on the common stock. They also declared the regular quarterly dividend of 1½ per cent. on the preferred stock.

The directors of the Tennessee Copper Company have declared a semi-annual dividend of $2 per share, payable August 15. This is an increase of 75 cents per share over the last disbursement, and puts the stock on a $4 annual dividend basis.

It is announced that the Sovereign Bank of Canada will shortly close its New York offices, and its agency business will be taken over by the firm of J. P. Morgan & Co. and the National Bank of Commerce.

Consul Hill writes from Amsterdam that a larger amount of American securities are now held there than in 1899. An Amsterdam international banker makes the following statement: "We are inclined to think that the total holding of American railway bonds has slightly increased, say from $296,000,000 to $309,000,000, but owing to the strained condition of the money market, which has caused an all round setback in price, the real value may be somewhat lower now than it was a year ago. Total stocks and bonds, cash value, $416,000,000." Usually American securities are held to the extent of from $250,000,000 to $400,000,000 cash value. It is the opinion of financial experts who have gone most carefully into this matter that Amsterdam's holdings, almost altogether railway stocks and bonds, usually aggregate about one-tenth of those of London, and sum up not greatly less than those of all the other European bourses—Frankfort, Paris, Berlin and Brussels combined.

The members of the underwriting syndicate of the Union Pacific 4 per cent. bond issue, subscriptions to which closed on July 10, were notified Monday by Kuhn, Loeb & Co., the syndicate managers, that they would be called upon to take all but 4 per cent. of the amounts for which they obligated themselves in the underwriting. That means that only about $3,000,000 of the $75,000,000 bond issue was taken by the stockholders, instead of something over $4,000,000, as was first announced. A 20 per cent. call upon the underwriters is made for July 22.

The aggregate deposits of the national banks and trust companies of Philadelphia, as of the date of the statement of the banking commissioner, May 28, were $532,764,585, as compared with $547,630,935 at the corresponding date in 1906. Notwithstanding that the deposits were smaller at the date mentioned in 1907, the loans were practically as large as they were a year ago, the aggregate amounts of loans on the two dates being respectively $354,341,207 and $355,504,845. The figures show:

	May 27-28, 1907	*May 26-28,* 1906
Deposits, national banks	$216,729,000	$216,106,000
Deposits, trust companies	532,764,585	547,630,935
Loans, national banks	226,995,000	214,225,000
Loans, trust companies	127,346,207	141,279,845
Total	354,341,207	355,504,845

The Industrial Bank of Japan will shortly issue a 5 per cent. South Manchurian railway loan of $20,000,000 at 97, in the form of railway bonds, running twenty-five years and fully guaranteed by the Japanese government. It is represented as a purely industrial, not a national, loan, and will be devoted to converting the gauge of the Manchurian Railway and linking the Korean lines. It is stated that the money will be mostly expended in buying materials in Great Britain.

The returns from the New York state transfer tax for the first six months of the current year were $2,412,139, against $3,317,259 for the corresponding period of 1906, a decrease of $904,423, or 27 per cent. The monthly average for the first six months was $402,139, against a monthly average of $571,721 for the whole of 1906, and $478,146 in 1905.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

Directors of the Amalgamated Copper Company on Thursday declared a regular quarterly dividend of 2 per cent. on the $153,888,000 outstanding capital stock. Heretofore the quarterly dividend has been at the rate of 1½ per cent. and one-half of 1 per cent. extra. In raising the annual dividend from one-half of 1 per cent. to 8 per cent. gradually since 1904, the rule has been to declare first an extra dividend in addition to the regular, and then make the whole payment regular. It was in November of 1906 that the dividend of one-half of 1 per cent. and one-half of 1 per cent. extra was declared. In 1906 the company paid 5½ per cent.; in 1905, 4½ per cent. was paid; in 1904, 2 per cent.; in 1903, 2 per cent.; in 1902, 2½ per cent.; in 1901, 7½ per cent.; in 1900, 8 per cent.

Railroads.

Governor Davidson, of Wisconsin, on Tuesday signed the 2-cent railway fare bill. The new law will take effect on August 15 next. It applies to all lines having a gross earning of $3,500 a mile per annum. This will affect all of the larger lines of the state, and some of the smaller ones.

Industrial.

The heavy oil production in the Glenn pool is reported making the Creek Indians of Indian Territory as rich as the Osages. The citizenship in the Osage nation is now worth about $25,000, but the Creeks are gaining fast. The average daily production in the Glenn pool is 125,000 barrels. Of this the Indian owners of the land get 12,500 barrels, one-tenth. The oil is worth about 41 cents a barrel. This gives the Indian lessors of the 10,500 acres comprising the pool $5,125 a day. This amounts to $1,872,825 a year. This is the royalty which is paid as long as the oil is in the ground. Then there is the money for the lease and the bonus, which frequently runs $5 and $10 and sometimes $20 an acre. This is all profit for the Indians.

The *Iron Trade Review* declares that July, 1908, will probably witness the making of the first steel at the Gary plant of the United States Steel Corporation. The blast furnaces will doubtless be ready for operation before that date. Excellent progress is being made on the colossal undertaking, work now going ahead simultaneously on eight blast furnaces and fifty-six open-hearth furnaces.

The production of copper in the United States in the calendar year 1906, according to figures compiled by the United States Geological Survey, was 906,591,947 pounds, being an increase of 18,000,000 pounds, or 2 per cent., over that of the previous year. The stock on hand at refineries on January 1 last amounted to 92,470,792 pounds, or a decrease of 25,773,236 pounds compared with the previous year. The consumption of refined copper for the year, including 215,000,000 pounds of foreign copper imported, was 680,000,000 pounds, exceeding that of 1905 by 80,000,000 pounds. The exports for the year aggregated nearly 450,000,000 pounds.

Miscellaneous.

Figures became available Wednesday of the outward passenger movement of all steamship lines belonging to the North Atlantic conference, for the six months ending with June. This practically covers the entire active season, as the movement from now on will be homeward-bound. These statistics indicate that, comparing with 1906, there was an increase during the six months of 2,758 first-cabin passengers, of 9,140 second-cabin passengers and of 31,204 steerage or third-class passengers. The statistics follow:

	1907	1906	*Inc.*
First-cabin	63,594	60,836	2,758
Second-cabin	59,168	50,028	9,140
Third-class	175,998	144,794	31,204
Totals	298,760	255,658	43,102

A corresponding return increase in the saloon passenger business is confidently expected during the second half of the year.

Quotations for Government, State, Railroad and Miscellaneous Bonds, Week ending July 18.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Weather conditions still favor seasonable trade and crops, and there is no more than ordinary quiet noted in wholesale lines as a result of midsummer conditions and the reign of the vacation season. Retail trade especially is turning out rather better than anticipated and clearance sales are freely patronized, indicating that the buying power of the country is maintained at a high level. Reorder business, too, is of fair proportions ; in fact, is rather more in evidence than are bookings for fall, which await a clearer view of crop outturn before finding full expression. It is quite generally the case, too, that where cancellations of fall orders are noted they are accompanied by the statement that these are no more numerous than usual at this season in previous years. Such conservatism as is noted, indeed, is generally with regard to far off deliveries. One favorable development certainly calling for notice is the continuance of good reports as to collections, which find confirmation in the steady gains in bank clearings noted at most cities over a year ago, itself a period of large gains over 1905. The crop developments, as above intimated, have been quite generally favorable. Corn has had especially good weather, warm and showery, with little damage reported as yet from flooding in low-lying ground. Cotton has also made excellent progress. Rains interfere with wheat threshing but help growth in the northwest, where, however, crop reports are spotted. Hay is turning out better than earlier expected and bringing good prices. Cereal prices reflect crop conditions largely, but poor European crop reports tend to steady wheat. Cotton is irregular, and former bulls have turned bears on prices. Stock speculation is largely professional and dealings are largely confined to a few subjects of market action. Money has eased at New York both for call and time, but some views are that this is temporary, and interior banks are reported well loaned up. Foreign trade for the fiscal year shows the relatively more rapid growth of imports as compared with exports.

In the leading industries there are some cross currents. Iron and steel are quieter, as a whole, with prices tending to ease, while copper is lower and stocks reported accumulating. In the shoe trade business is moderate. In the cotton goods industry production is of record proportions but still insufficient to meet demand. Special activity is noted in the western coal trade, where many mines are running full time. Supplies in the northwest are reported small. At the east high-grade bituminous coal sells well, but concessions are necessary to move low grades. Lumber is quieter, as a whole, and southern production is being curtailed.

Except where heavy rains and swollen rivers have flooded low ground, the weather of the past week has been ideal for corn, being hot and forcing, with frequent showers. That crop has made good progress, except in portions of Iowa, Illinois and Missouri, where some damage due to lack of cultivation is noted. Heavy and frequent rains are noted in the winter-wheat belt as delaying threshing, but reports as to yields are of good quality, though shorter than last year. Pacific coast wheat crops promise well. There is more complaint of spotted, irregular conditions in the northwest. North Dakota does not promise as well as a year ago and the crop is late, needing a warm autumn for proper growth. The hay crop of the central west promises as large a yield as last year. Oats are still irregular. Ohio winter-wheat reports are not as good as earlier expected. Farmers generally are in no hurry to sell winter wheat.

Cotton continues its excellent progress, reports being almost uniformly good, though the plant is still late. Especially marked improvement is noted in the Carolinas, Georgia and Florida, in the New Orleans district, and in parts of Texas. In the south Atlantic states the plant is blooming nicely. In Arkansas cotton is doing well, while other crops, notably corn, are suffering for rain. The hot, dry spell in Texas hurt corn, and the late-planted crop is said to be a failure.

Pig-iron markets are still in a lethargic condition. Urgent demand for spot supplies has disappeared, and producers show a greater disposition to rush shipments. The impression is growing that production is gaining on consumption, and manufacturers feel that prices, which are now steady at the recent decline, must recede. The movement in foreign irons is about over, and in order to make sales, concessions have to be made. Strikes of laborers at Duluth and Two Harbors affect the movement of ore. New business in finished lines is light, as might be expected at this season, but the mills are well provided with old orders. Demand for structural material is fair, mostly for railway bridge work, barges and packet steamers. Bar iron meets with slow sale, and in fact some western plants display more concern about orders. Steel bars are, however, in satisfactory demand and specifications are heavy. Business in steel rails and track material is rather quiet. Prices on nuts and bolts are easier. Plates are being delivered more promptly, and premiums are not so freely paid as they were some time ago. Old material is dull and lower. Coke is inactive but prices are firm, and hot weather has reduced the supply of labor in the producing regions. Copper has again receded in price, but new business has not developed to any extent, and lower prices are looked for. Stocks are said to be quite large. Wire, sheets and brass are also lower, the reduction amounting to about 4 cents per pound. Spelter, lead and tin are weaker.

Prices in leading staple markets have been rather irregular, but inclined to firm up after early weakness, on which the lowest prices for a month past were struck in wheat, corn and cotton. Wheat was strong at the beginning of the week on reports of rain needed in the northwest and very bad reports from Europe, rains and floods in Germany, and cold weather in Austria and Hungary. Rains in the winter-wheat belt, where harvesting is on, were also a source of strength, but needed rains in the northwest weakened prices later, and on Tuesday the lowest prices for a month past were struck. Net changes are slight. Corn and oats have responded to reports of rains where needed and advices of good growing weather generally, with prices about 1 cent lower.

Cotton declined early in the week on good weather reports, long liquidation and attacks on prices by sold-out bulls, who quote trade reaction as a reason for lower prices. At the lowest point prices were 25 points lower on July, with spots 20 points off. Most weakness was noted on near positions. Later on there was short covering, better cables and smaller offerings of cotton, on which all of the early weakness disappeared, with July regaining its entire loss and spots 10 points of the early loss, but with new crop weaker and showing slight losses for the week.

The foreign trade returns for the fiscal year 1907 show that imports gained over 1906 at almost double the rate shown in exports, the increase in imports being 16 9 per cent., while the gain in exports was 8.9 per cent. Compared with the first year of the past decade, exports are 52 per cent. larger, while imports have increased 132 per cent. The total trade for the year was $3,315,252,116, a gain of 11.6 per cent. over 1906, and of 79 per cent. over 1898, the opening year of the past decade. In imports, free and dutiable goods have gained almost equally over 1906, but in exports the features have been losses in shipments of breadstuffs, provisions and oils, while cotton gained 20 per cent., and the credit for the large gain in all exports rests mainly with the shipments of manufactured goods.

Stock-market speculation is narrow, professional and governed by manipulative influences. Activity is confined to a few leading stocks, like the Harriman and Hill issues or Amalgamated Copper. The report of the Interstate Commission was construed as favorable to Union Pacific interests, and the placing of Amalgamated Copper on the permanent 8 per cent. dividend basis offset the further concessions in copper prices. United States Steel shares were inclined to be heavy on a reported decrease of orders. Foreign exchange showed increased firmness on the easing off of money, demand sterling being 486.90.

Conservative buying of shoes and leather is noted in leading markets. Eastern shoe manufacturers are reported to have good quantities of leather on hand. Production of split leather has caught up with demand. A fair line of spring sample sales is reported by shoe manufacturers, and some reorders for fall also, but buying is conservative. Shoe shipments for the year are 4 per cent. below 1906.

Fair activity, with firm prices, is noted in wool. Large sales are few. The firmer London market, where Americans are reported buying freely of desirable staple wools, and light domestic stocks make for steady prices. Manufacturers appear to have bought freely in the country of late, and western supplies are well cleaned up.

Bank clearings for the week ending July 18 aggregate $2,875,378,000, 3 per cent. less than last week, but 4.7 per cent. over this week last year. Outside of New York exchanges amount to $1,149,039,000, 5 per cent. below last week, but 9 per cent. over the week last year.

Business failures for the week ending July 18 number 177, against 185 last week, 188 in the like week of 1906, 165 in 1905, 190 in 1904 and 183 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending July 18 aggregated 2,210,770 bushels, against 3,264,714 bushels last week, 1,535,967 bushels this week last year and 5,221,880 bushels in 1901. For the first three weeks of the fiscal year the exports are 7,574,388 bushels, against 5,233,583 bushels in 1906-07 and 14,025,668 bushels in 1901-02. Corn exports for the week are 2,066,967 bushels, against 1,411,675 bushels last week and 837,162 bushels in 1906. For the fiscal year to date the exports are 4,889,446 bushels, against 2,123,480 bushels in 1906-07.

IN CANADA.

Summer trade in Canada has proved better than expected a while ago, and collections are showing this in a noticeable improvement all around. There is still complaint in parts of the northwest, but even there the feeling is better. The outlook as to the late crops is encouraging, grain yields especially promising well for this early date. Reorder trade in dry goods reflects the good retail business doing, and the clothing trade is also reported in good shape. Montreal reports mills and car foundries working to full capacity, crops in eastern Canada looking well, and export business improving. Toronto, like Montreal, reports the leading feature to be the improvement in collections. Repeat orders are fairly large and a record year's business is likely. Trade is good in the northwest, a good yield of grain is indicated, and the annual exhibition at Winnipeg has made trade and collections better, though there is still room for complaint. Summer trade has been good along the Pacific coast, export trade is growing, and there is still complaint about labor scarcity. Clearings for the week aggregate $88,286,000, a loss of 9 per cent. from last week but a gain of 17 per cent. over the week in 1906. Failures for the week number 26, as against 28 last week and 18 in this week a year ago.

CROP REPORTS GOOD.

WARM, SHOWERY WEATHER HELPS WESTERN CORN BUT HAMPERS WHEAT THRESHING. SPRING-WHEAT REPORTS RATHER LESS FAVORABLE. NORTH DAKOTA OUTLOOK LESS FAVORABLE THAN IN 1906. TEXAS CORN HURT BY DROUGHT. COTTON MAKING WONDERFUL PROGRESS BUT STILL LATE. BLOOMING FINELY. HAY A LARGE CROP IN WEST.

CHICAGO.—Spring wheat in the American and Canadian northwest is spotted and at best cannot make more than a fair average yield, a continuation of present conditions being necessary to hold the crop to about the proportions of last year. Southern Manitoba and northern North Dakota have suffered from drought, but recent rains in a part of those sections have been beneficial. Some reports mention that the crop is very weedy. The lateness of the crop makes it susceptible to injury should frost come before September 1. Winter-wheat threshing has been delayed by heavy rains in the southwest. In Nebraska the outturn is good, yields being fifteen to twenty-five bushels the acre. Corn is making good progress, but heavy rains over eastern and parts of western Iowa, also in western Illinois and the bottom lands of Missouri, have made it impossible to cultivate the fields and has caused some damage. The stand is irregular. The weather, however, is the best corn has had in recent years, being hot and forcing. Oats have barely held their own, being better in some places where timely rains fell, but in other sections the crop has ripened prematurely and rusted slightly. The hay crop in the central west is as good if not slightly better than last year's. New winter wheat has not moved freely owing to rains delaying threshing, and farmers do not appear to be in a hurry to sell.

INDIANAPOLIS.—Heavy rains the past week interfered considerably with harvesting in central Indiana, and is believed to have done some damage. Such wheat as has been harvested is said to be of excellent quality. The yield, however, varies from 50 per cent. to normal. The peach crop, despite unfavorable early reports, will be a fair one.

TERRE HAUTE.—Wheat threshing is in progress and the yield surpasses early estimates. A large corn crop is assured.

CINCINNATI.—Corn continues to improve. Wheat is mostly cut; in some localities it is badly headed and disappointing. Hay mostly cut, but the crop is short. Oats are about ready to cut; the yield promises to be better than that of wheat.

ST. PAUL.—Wheat in North Dakota does not promise more than half a crop as compared with the average of the previous five years. The land is not so strong as formerly. Consequently, wheat, having been sown later this year, with much cold and backward weather, is short and uneven and in places weedy. It cannot be harvested until the end of August at best. Flax is relied on, along with the other cereals, to replace the shortage of wheat, and altogether the crop situation will not affect this market adversely. In Minnesota all crops are doing well at this time.

DAVENPORT.—The weather, which is warm, with numerous heavy showers, is good for corn, except in the lowlands, which are overflowed by swollen rivers or streams.

DES MOINES.—In the greater portion of the state conditions are fairly favorable for field work, but prospects for other than a large shortage in the corn yield are not good. Hay, winter grain, oats and barley are being harvested with fairly satisfactory yields.

SIOUX CITY.—There has been too much rain for corn, which needs dry, hot weather. Small grain is down.

ST. LOUIS.—Crop conditions are much improved. Rain and favorable weather have

benefited corn in sections. Where wheat has been threshed the quality is exceptionally fine.

SIOUX FALLS.—Crops, though about two weeks late, are making good progress and promise well.

ST. JOSEPH.—Wheat is being harvested. The yields are from six to thirty bushels per acre. The condition of corn is favorable.

OMAHA.—Harvesting of wheat is showing much better results than anticipated. While the yield will be short, the quality is excellent. Corn is making good progress under favorable conditions.

KANSAS CITY.—Threshing of wheat in Kansas has been delayed owing to unusually heavy rains, and some damage by water is reported to low fields and to the quality of wheat in the shock. The ratio of damage, however, is not large as compared with the entire yield. Rains have materially improved the condition of growing corn.

WICHITA.—Kansas will not average more than ten bushels of wheat per acre. Heavy rains help corn, which is in fine condition, though late.

CHARLESTON.—Warm weather continues to help cotton, and prospects are very bright for a good crop.

RICHMOND.—All growing crops are improving. The cotton crop of North Carolina shows improvement, but it will be later than usual.

SAVANNAH.—Highly satisfactory weather conditions have prevailed during the past week, and the condition of the cotton plant has wonderfully improved. Cultivation is up to normal seasons. Grassy fields are known only in isolated cases, and the plant appears healthy and thrifty everywhere. It is in bloom in all sections, and of normal size and taking on fruit rapidly. With continued good weather it will soon reach the average, excepting that it will be from three to four weeks late.

AUGUSTA.—Cotton is in healthy condition and heavy with blooms. Too much rain is reported in some sections, but no material damage is reported.

ATLANTA.—Cotton is making fine progress under favorable weather.

MACON.—Frequent and seasonable rains, alternating with sunshine and hot weather, have changed former gloomy prospects to record yields. Corn is made. Cotton depends on August.

JACKSONVILLE.—Crops are promising, and the prospect for citrus fruits has improved.

BIRMINGHAM.—Crop prospects continue favorable.

MEMPHIS.—Corn and cotton are making rapid progress.

LITTLE ROCK.—Cotton is making rapid progress with favorable weather, but other crops are badly in need of rain. Peaches are now being shipped north in train loads, and the apple crop is also good.

NEW ORLEANS.—Crop conditions are excellent, and cotton is being rapidly worked up to the average condition. Fields are generally well cultivated, and the damage from insects and other causes is nominal. Sugar cane and rice are promising, and a few small lots of new rice have already reached market.

DALLAS.—Recent rains, followed by warm weather, have benefited both corn and cotton. Prospects for the latter are improving.

FORT WORTH.—Cotton is growing nicely and there are very few complaints of weevils.

WACO.—Dry, hot weather and strong winds have greatly damaged corn. Late corn is practically a failure. Cotton is doing well.

PORTLAND, ORE.—Seasonable weather has prevailed and growing crops are in excellent condition.

SPOKANE.—Wheat is looking fine.

TRADE REPORTS.

A very fair amount of business was done in dry goods at New York during the week, cottons and silk goods being still most in demand. Dress goods are also active. Cancellations of orders for fall delivery are very few in proportion to the number received, and the outlook in the trade is considered promising. Collections continue satisfactory. Dealers in worsted and woolen yarns report conditions good, spinners are catching up with their orders, and prospects generally are deemed favorable. The excessive heat of the week has caused a temporary lull in the retail millinery and hat business. Business in cloaks, suits and waists is active, out-of-town buyers are numerous and collections are good. At retail, a very active business was transacted in white suits and waists. Manufacturers of shirts, neckwear and gloves are now busy on early fall orders. Jobbers of knit goods and hosiery have done a good business, but the season with retailers was not so satisfactory, and collections are slow. Raw silk is quiet, and though some of the new crop has come on the market, there is no disposition to buy largely. Rags and shoddy are in very poor request. Business in the wholesale hardware trade is keeping up beyond expectations, but dealers in copper are holding off, expecting a further fall in price. Dressed meats continue in good demand. Live-stock receipts are equal to requirements; prices are steady. Manufacturers of cigars are busy on regular orders, but, owing to the high price of leaf tobacco, are not soliciting much new business. The confectionery trade is more or less inactive, which is not unusual at this season. In the wholesale paper trade a very fair volume of business was done. Prices are firm, and the outlook for a good fall trade is considered promising. Real estate is quiet, and the number of plans filed for new buildings is limited.

The following telegrams show trade conditions at the cities mentioned for the week ending July 19:

PROVIDENCE.—Seasonable goods are in great demand on account of the hot weather. Cotton goods are strong, with prices advancing. Collections are fair.

PHILADELPHIA.—The wool market shows little change. Dealers say prices are too high, but growers are inclined to hold or ship on consignment. Carpet wools and hair are sluggish and prices tend to ease. Jobbers of dry goods and notions report an active trade in fall goods, which in several instances is ahead of last year's, mostly with out-of-town customers, the local market being inactive; collections are fairly prompt. Retailers report a fair trade. Chemicals and dyestuffs are fairly active, especially in staple goods, and the market rules steady, though there is a disposition to trade only from hand to mouth; collections are slow. Drug jobbers report an active demand at strong prices. Paints and glass show more activity, and retailers especially notice a decided improvement; prices are firm. Lumbermen in the wholesale line report the usual midsummer dullness, but they are looking forward to a good fall business. There are no indications of lower prices. Retailers say they are very busy, building operations now being in full swing. Competent mechanics are scarce. Hides and skins continue dull and weak. Shoe dealers report a decreased volume of business. Tobacco sales throughout Canada and the west are very good, particularly in Sumatra and Havana. Manufacturers of cigars are fairly busy, but are buying sparingly. Dealers and packers are about 2 cents a pound apart on price. City retailers are doing a very large business. Liquor distillers, also wholesalers, are doing little business, having supplied the usual wants of their customers for the summer. The July inventory showed a marked increase in amount of business over the same period last year. Retailers are doing a very lively trade. A convention here brings thousands of visitors. This and another convention following for two weeks are expected to use up stocks on hand. Pig iron is quiet and prices are inclined toward weakness. Coal for domestic use is dull. Steam coal of the lower grades is inactive and prices are off, but for coal of good quality demand is fair and prices are firm.

PITTSBURGH.—Pig iron is quiet. There is some inquiry for both Bessemer and basic iron, but buyers seem to be holding off in expectation of lower prices, though, all things considered, the trend appears to be in the direction of maintaining present quotations. With the finishing mills the volume of new business being received at this time is hardly up to expectations, but no apprehensions are expressed on this account, and operations continue with unabated activity. Shipments of coke are normal, the demand for delivery on contracts being keen. The volume of general business continues satisfactory and the prospects are regarded as favorable. Spot quotations for pig iron at the valley furnaces are nominally as follows: Standard Bessemer, $23 50; chilled basic, $23; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2.50, and foundry coke, $3.25 to $3.50, at the ovens.

BUFFALO.—Wholesale and jobbing trade is normal, while retail trade is active. Collections are reported fairly good. The live stock and produce markets appear active, with prices firm and good demand.

BALTIMORE.—Retail business is of fair volume owing to warm weather and clearance sales. In general lines midsummer dullness prevails; salesmen are at home awaiting the coming of out-of-town merchants, who have not been on in such large numbers as at this time last year. Prices of dry goods and cloths continue firm and goods rather scarce, particularly in the latter. Manufacturers of harness and brushes report satisfactory business. Collections in general are only fair. The grocery business is about normal. Canned goods continue high and scarce and in active demand. In oils, the market is steady. Turpentine is lower. The spirit market is active and collections are normal. Scarcity of Havana leaf is being felt and prices are higher. Sumatra is selling fairly well. Maryland leaf receipts are light, due to harvesting. Ohio leaf continues very light, with a fair demand. Business in men's furnishings and hosiery is satisfactory. Clothing manufacturers say that July discounts, from present indications, will be very much reduced in numbers. General collections for the month thus far have been poorer than for some years. A good fall business is looked for, particularly in the south, where crops have greatly improved and give promise of good yields.

CINCINNATI.—General business is exceedingly quiet and confined largely to immediate wants.

CHICAGO.—Trade reports are more irregular, but there is nothing discouraging in them. A few cancellations are reported in dry goods from sections where crops have been materially injured, but they are no more than come every year. Salesmen who have been on their vacations are preparing to start on the road again. Shipments are being made on previous sales, and the volume of new business is fair. Clothing sales are comparatively slow. Pig iron is having a slightly better demand and the market is steady at recent prices on standard grades, but on less desirable iron concessions are made. Finished iron and steel are not moving rapidly. New orders are mostly for small lots. A large tonnage in structural business is in sight and will be placed within the next week. Coal is moving in larger volume, and many of the bituminous mines are running at about full capacity. Interior lumbermen are not loading up extensively, being disposed to hold off, owing to high prices. Building operations are about the same as last year. Butter, eggs and potatoes advanced and poultry declined. All live stock sold higher, but failed to hold top prices. Receipts of cattle increased and hogs and sheep decreased. Money is strong and demand has improved. Banks are closely loaned up. Commercial paper is abundant, but meets with slow sale at 5½ to 6 per cent. Collections are slow.

PEORIA.—Wholesale trade is fair, but retail is slow, although reduction sales are helping to move goods. Collections are slow.

INDIANAPOLIS.—Trade conditions at this time are about normal, orders for the most part being for goods for which there is an immediate demand.

TERRE HAUTE.—Summer clearing sales are proving fairly satisfactory. Merchants report stocks reduced to the usual state at this season of the year.

ST. LOUIS.—In nearly all lines filling-in orders continue in fair volume. Traveling men are now rounding up their trips preparatory to coming in for the house trade which is expected to begin in about two weeks. Some conservative merchants look for an exceptionally large fall trade. Demand for better grades seems to be increasing and prices are well maintained. Building material shows a falling off. Hardware, both shelf and heavy, is in good demand, with prices firm. Manufacturers of clothing and ladies' ready-to-wear suits and skirts are behind on orders on account of the scarcity of experienced help. Clearance sales continue among department stores with fairly good results. Collections are good.

KANSAS CITY.—Retail trade has materially improved and summer merchandise is moving freely, with fewer cut-rate sales than heretofore at this season of the year. Jobbers in dry goods and kindred lines report an excellent volume of business for fall delivery and good-sized orders for immediate shipment.

MILWAUKEE.—Trade is satisfactory in most of the principal jobbing and retail lines.

SIOUX CITY.—Jobbers in shoes and dry goods report sales in excess of last year's. Future orders are good. Other lines are improving.

DAVENPORT.—Retail trade is good, in most cases equal to or in excess of the corresponding week last year. Collections are fairly prompt.

ST. PAUL.—All jobbers are doing an increased business over last year, and few cancellations of fall orders are received. Collections are good for the season. Merchants are hopeful.

OMAHA.—General trade is seasonable. Collections show some improvement.

LINCOLN.—Business is fair. Collections are fair.

SIOUX FALLS.—Trade and collections are fair.

CHARLESTON.—Wholesale trade is exceedingly good, and a good fall trade is anticipated. Collections are slow.

RICHMOND.—Wholesale and retail dealers in agricultural implements, field and garden seed and fertilizers report increased sales for the past few weeks. The weather in the early spring and summer months was unfavorable for those engaged in this line, but recent favorable weather has given tone to the market. Orders for dry goods for fall are satisfactory. Collections are fair.

SAVANNAH.—Collections, though slow, are slightly better than they were last week.

AUGUSTA.—Trade is quiet.

ATLANTA.—Trade in wholesale lines continues active. All leading retail dry goods dealers report increased sales for the first half of the year. The state prohibition bill has been passed by the senate and is now before the house and the consensus of opinion is that it will become a law. This has affected retail trade to same extent and it is also reported that some building contracts have been canceled.

MACON.—Trade is depressed locally, because of the failure of the largest bank here. Demand for money is acute.

JACKSONVILLE.—Mills are shutting down to help the lumber market. Wholesale orders are of greater volume than last year. Retail trade is fair. Collections are ordinary.

BIRMINGHAM.—Southern foundry No. 2 pig iron is selling at $22 per ton. Demand is not so strong as heretofore. Collections are somewhat slow. Business is fairly good.

NASHVILLE.—The feeling in trade circles is optimistic, and investments are more than seasonably active. Provisions tend upward. Jobbing markets are firm, although purchases of retailers are for immediate wants only. Orders are sufficient to keep the manufacturing plants busy.

MOBILE.—Jobbers report a slight increase in sales for future delivery with collections fair. Reduction sales are being made by retailers to dispose of rather large stocks of summer goods still on hand.

CHATTANOOGA.—Trade conditions are fairly satisfactory. Collections are fair to good.

MEMPHIS.—Retail business is quiet. Jobbers report business gradually improving. Some lines report business good, others slow.

LITTLE ROCK.—Wholesale trade is very satisfactory for this time of year, but is not equal to that of the like period in 1906. Retail trade is fairly good. Collections in the city range from fair to good, but are slow in the country.

NEW ORLEANS.—Retail and department stores are having a good trade, and merchants at the interior are doing well. Grocery jobbers are busy, and other lines report a good filling-in business. Orders for fall shipment are in most instances heavier than usual.

FORT WORTH.—Trade is fairly active.

DALLAS.—Trade is quiet with both retailers and jobbers. Collections are fair.

WACO.—Business is satisfactory, but collections are slow.

SAN FRANCISCO.—The installation of a new city government has already given unmistakable impetus to business. Countless projected enterprises will now be rushed to completion. Money is slightly easier, and collections are fair.

SEATTLE.—Recent labor troubles in Alaska have reduced the output of gold to some extent and retailers are reported overstocked, and Seattle

wholesale dealers report orders from Alaska considerably lessened. Lumber and shingle trade is active, with prices firm and the car shortages somewhat relieved. Collections are fair.

SPOKANE.—The demand for labor far exceeds the supply. Business is active with collections fair.

TACOMA.—Shipping so far this month has been uncommonly large. Business with Alaska shows an increase. Flour mills will soon shut down for overhauling to take care of the new wheat crop. Collections are fair.

PORTLAND, ORE.—Trade is active in all lines and collections are good.

TORONTO.—The noteworthy feature of trade is the improvement in collections during the past week. Retail trade has kept up well, and as a result money is coming forward more freely from all directions. Wholesale trade is moving as briskly as ever. In dry goods, sorting trade is better than normal. Repeat orders for summer lines are generally large, and the volume of fall business will likely make this a record year. Values of textiles and general lines are very firm. Hardware lines are moving briskly. There is no let-up in the demand for builders' supplies. Activity in this regard is general in all parts of Canada, and as a result prices for lumber and all materials are very firm. Grocery shipments continue heavy. The strength in canned goods continues the feature of that trade. Hay and straw have been scarce for some time and prices are high. Butter and cheese are coming forward well, but hold firm. The yield of small fruits has been light this year, and prices are higher than for some seasons.

MONTREAL.—Collections in the western country, and indeed to some extent in all Canada, have shown some improvement. It would appear that although summer trade was late in setting in, its volume will not be behind previous years. A splendid retail trade is now moving in all directions. In dry goods this is particularly the case. The reorder business for summer lines is brisk, and fall and winter trade is exceedingly heavy. Some lines of trade report an astonishing expansion over the business done last year. This is the case with the ready-made clothing trade. In the matter of ready-made cloaks, it is said business has been 50 per cent. heavier than ever before. There is also a very gratifying improvement in the quality of the trade doing. All lines of iron and steel are in brisk demand. Mills and car foundries are working to capacity and prices are firm. The boot and shoe industry reports great activity in preparation for fall business. There is a good business in groceries. Crops in eastern Canada generally are looking well. In the maritime provinces they are much better than had been reasonable to expect. The shipping trade is active and export business is improving. Dairy produce is coming forward more freely.

VANCOUVER-VICTORIA.—Summer trade has been exceedingly heavy along the coast. Industrial activity in the interior and the northern part of the province has resulted in an excellent demand for all lines of wholesale goods. Collections also have been fair to good. The shipping trade is showing steady growth. Prices of commodities generally hold firm. There is still some complaint about the scarcity of labor.

WINNIPEG.—There is generally a good tone to trade throughout the northwest. The excellent condition of the crops is having a good effect upon general business. In all parts of the country the expectations are for a heavy yield of grain, and the quality of the crop is expected to be good. The annual exhibition has brought to this city large numbers of retail merchants, and as a result wholesalers have had a busy week. Collections are showing some improvement, although there is still room for complaint in this regard.

FINANCIAL.

Money Market.

Heavy payments by the Treasury and the usual tendency of money to return from the interior to New York at this period result in an apparent gain of some $5,000,000 for the week by the banks at that city. These circumstances, with the absence of further gold exports, resulted in the appearance of decided ease in call-loan rates, which fell to as low as 2½ per cent. for bankers' balances at the Stock Exchange, renewals in the later portion of the week being generally made at 3 per cent. Some concessions were also reported in time money, but it is noted that six months' or longer arrangements are 5¾ per cent. bid, and lenders are decidedly averse to considering any rate lower than 6 per cent. for such loans. In fact, the market looks forward to the prevalence of relatively high rates from August onward, when the crop movement at the west and south is fairly in progress. It was noted that the foreign financial position shows improvement, which is considered in a way as a safeguard against further withdrawals of gold from this country, but at the same time the Bank of England's reserve is lower than at the same period in seven years, while foreign exchange at New York is not so far below the gold-shipping point as to justify absolute confidence in that respect.

Foreign Exchange.

Uncertain tendencies were seen in the exchange market at New York during the earlier portion of the present week. Business was restricted in volume, there being but a small supply of commercial bills, with a limited inquiry for remittances. Actual demand sterling was quoted at around 4.86.75 and the tone of the market was, on the whole, heavy. The increased ease of money in the last days of the week resulted, however, in a strengthening of exchange. The inquiry became larger, and the actual quotation advanced to 4.86.95, and as high as 4.87 was quoted on Friday. There has been, however, no special apprehension of a resumption of gold exports to Paris, though a further hardening of exchange might lead to them.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.25 @ 4.87.30; commercial bills, 4.83⅛ @ 4.83¼; francs, 5.20@5.16⅞ less 1-64; reichsmarks, 94⅜ @95 3-16 less 1-32.

The Bank of England's discount rate is unchanged at 4 per cent. Its return for the week ending Wednesday showed an increase of £390,314 in specie and a reduction of £1,923,000 in loans. The proportion of reserve to liability increased from 43.71 per cent. to 46 per cent., this latter figure comparing with 49.12 per cent. a year ago. In the London open market call money is quoted at 2 per cent. and discount at 3½ @ 3⅝ per cent. The Bank of France this week reports an increase of 4,475,000 francs in gold and a reduction of 10,250,000 francs in bills discounted. Its discount rate is still 3½ per cent., the Paris market quotation being also 3½ per cent. At Berlin the bank rate is 5½ per cent. and the market 4¼ per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending July 18 shows an aggregate of $2,875,378,000, as against $2,984,212,000 last week and $2,746,114,000 in the corresponding week last year. Canadian clearings for the week aggregate $88,286,000, as against $97,545,000 last week and $75,354,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	July 18	Inc.	Dec.	July 11
New York	$1,726,339,000	1.8	....	$1,772,031,000
Chicago	243,483,000	10.7	....	268,404,000

New York Banks.

Last Saturday's Clearing House statement was a decidedly mystifying document. It was generally conceded that the averages of the preceding week made in all probability a worse showing as to cash holdings and other items than was actually the case. Still it was regarded as rather strange that in the face of a known movement of funds which would indicate a loss of about $6,000,000, the averages displayed an increase of some $4,000,000 in the combined specie and legal tenders. These results, in the absence of detailed information, appear to be the outcome of the average system and the shifting of balances between the banks and other institutions. The loans showed further decrease of over $10,800,000, which was attributed to the transfer of borrowings from the banks to trust companies and international finance houses. The decrease in deposits was $7,780,000, or nearly $1,000,000 more than the amount called for by the changes in loans and cash. This made the reserve requirements $1,945,000 less than they were a week before, and the surplus reserve consequently increased $6,020,000. The figures of the statement compare as follows with those of the preceding week:

	July 13	July 6	Changes
Loans	$1,104,835,900	$1,115,724,300	D. $10,888,400
Specie	201,818,000	199,710,500	I. 2,107,500
Legal tenders	72,749,000	70,780,800	I. 1,968,200
Deposits	*1,070,759,800	1,078,540,200	D. 7,780,400
Circulation	50,321,700	50,396,400	D. 74,700
Total reserve	274,567,000	270,491,300	I. 4,075,700
Reserve required	267,689,950	269,635,050	D. 1,945,100
Surplus reserve	6,877,050	856,250	I. 6,020,800

The following shows the relation between the respective dates:

	July 13, 1907	July 14, 1906	July 15, 1905
Loans	$1,104,835,900	$1,036,233,400	$1,167,308,100
Specie	201,818,000	182,941,300	220,162,100
Legal tenders	72,749,000	85,872,500	89,115,700

New York Securities Market.

Trading in the stock market continues to be of the same professional character as heretofore, considerable manipulation being discernible in the more prominent stocks, such as Union Pacific and the Hill issues. Price movements during the week have been irregular, but the principal feature was the display of a certain amount of underlying strength. The prevalent belief, in fact, is that a number of large operators, possibly with the coöperation of some of the more prominent financial interests, are attempting to bring about a higher range of prices with a view to attracting public buying and support, although anything

of the latter description is hardly visible. The market during the week consisted, therefore, of a series of moderate advances under the lead of a very few of the active specialties, modified by comparatively unimportant declines, due in the main to profit-taking, there being an apparent indisposition on the part of the traders to act on the bear side except in a petty way, and for very small profits. On last Saturday an unexpectedly favorable bank statement stimulated a sharp rise led by Union Pacific. Throughout the week, in fact, money market conditions improved, funds on call being comparatively abundant, so that the rate for renewals worked down to 3 per cent. Some concessions were reported in the rates asked for time money, but this did not extend to six months' loans, for which 6 per cent. is still asked, the general impression, indeed, being that the easing of money is more or less temporary and will be succeeded by higher interest rates whenever the crop-moving demand asserts its influence. It was noted with some satisfaction that the foreign money markets also showed an improvement, and, although foreign exchange became firmer in consequence of the easing of money, the idea prevails that no further gold shipments are probable. The actual developments of the week which had a bearing upon the market were mixed, though mainly favorable. The principal unsettling influences related to the reported falling off of activity in certain branches of the iron and steel trade, while there was a further marking down of copper in the metal market. These factors, however, were largely offset by the publication of the Interstate Commerce Commission's report on the Union Pacific, the important feature of which document, in the eyes of Wall street, being the omission of any references to prosecutions or suits against the principal individual identified with the various deals in which the Union Pacific has been involved. It was on this account that Union Pacific had a rather sharp advance on Monday and Tuesday, and tended to hold its ground in the latter transactions. At the same time the street was somewhat influenced by supplementary rumors that the Executive and the Department of Justice might, after all, take some action against Mr. Harriman, although the chairman of the Interstate Commission was quoted as stating that he had secured immunity by testifying in the inquiry. The drop in copper prices naturally affected Amalgamated Copper adversely, but the fact that the directors on Thursday declared a regular dividend of 2 per cent. for the quarter, instead of the customary 1½ per cent. regular and one-half per cent. extra, thus putting the stock on an 8 per cent. basis, had a sustaining influence, the stock being strong in Thursday's and Friday's trading. The Hill stocks, Northern Pacific and Great Northern, became features from the middle of the week onward, there being vague rumors of some important developments which would be especially favorable to the former company, the story which was most freely circulated in this connection being that a readjustment of the joint control the two roads exercise over the Burlington property was in contemplation. Reports of decreased orders for iron and steel were responsible for selling of the United States Steel shares, especially the common, although they received support at the decline and later on tended to rally. The market was active and higher on Friday, though the volume of trading was moderate and the general character of the trading continued to be unchanged.

Boston Stock Market.

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
January 3	4,255,270	3,839,741	1,411,947
January 10	4,073,110	4,768,772	700,950
January 17	2,636,460	3,448,862	1,138,974
January 24	3,328,255	3,433,585	1,101,587
January 31	2,102,216	3,056,208	945,358
February 7	3,319,930	3,241,939	987,775
February 14	2,500,139	2,951,642	536,540
February 20	2,932,491	2,357,068	923,022
February 28	2,857,420	2,300,476	907,936
March 7	2,251,303	2,563,983	1,285,956
March 14	2,080,034	2,010,237	895,742
March 21	1,878,614	2,203,012	1,044,595
March 28	2,707,566	1,542,852	988,600
April 4	3,460,872	2,155,816	886,017
April 11	1,831,105	2,362,347	1,292,301
April 18	3,102,467	1,844,798	1,242,267
April 25	2,583,242	2,149,684	1,260,316
May 2	2,234,756	2,104,748	1,279,864
May 9	2,994,419	2,142,662	899,355
May 16	2,800,177	2,716,783	1,512,550
May 23	3,684,683	3,761,206	1,221,208
May 30	2,401,994	2,526,739	1,309,223
June 6	5,263,138	3,301,007	1,476,840
June 13	3,376,962	2,329,242	588,017
June 20	2,850,222	1,760,609	975,832
June 27	3,598,724	1,902,555	756,641
July 4	2,098,904	1,745,343	1,050,644
July 11	3,264,714	1,952,273	1,903,304
July 18	2,210,770	1,535,967	705,329

Largest exports in 1906, week ending Aug. 30..... 5,188,817
Smallest exports in 1906, week ending July 19..... 1,535,967
Largest recorded exports, week ending Aug. 11, 1901 9,039,761
Smallest recorded exports, week end'g Feb. 16, 1905 536,540

Cereal Exports, with Destinations.

The exports of wheat and corn (in bushels) and of flour (in barrels) from the United States and Canada (coastwise shipments included), with ports of destination, for the week ending July 11, 1907, follow:

To	*Wheat*	*Corn*	*Flour*
Liverpool	855,274	128,183	4,688
London	123,074	68,425	36,652

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and that portion of the season ending with July 13 compares with preceding weeks and seasons one and two years ago as follows:

Week ending	Flour, barrels	Wheat, bushels	Corn, bushels	Oats, bushels
July 13, 1907	297,460	3,075,700	3,222,516	1,885,461
July 6, 1907	303,549	3,391,938	3,642,149	2,238,534
July 14, 1906	305,722	4,464,316	3,111,723	3,307,029
July 15, 1905	290,624	3,186,173	3,421,790	2,738,469
Season				
July 1, 1907, to July 13, 1907	601,009	6,467,638	6,864,665	4,123,995
July 1, 1906, to July 14, 1906	658,293	6,628,247	7,011,843	6,549,149
July 1, 1905, to July 15, 1905	578,388	5,059,215	8,033,325	5,265,752

World's Wheat and Corn Shipments.

WHEAT—BUSHELS.

	July 11, 1907	July 4, 1907	July 12, 1906
United States and Canada	3,265,000	2,008,904	1,952,000
Argentina	992,000	928,000	1,192,000
Russia	1,120,000	2,640,000	1,968,000
India	1,296,000	1,264,000	1,232,000
Danubian	1,000,000	1,376,000	360,000
Australian	288,000	384,000	80,000
Total	7,961,000	8,690,904	6,784,000

CORN—BUSHELS.

United States and Canada	1,412,000	1,410,000	595,000
Argentina	1,479,000	1,895,000	3,485,000
Russia	1,657,000	833,000	178,000
Danubian	3,323,000	3,578,500	901,000
Total	7,871,000	7,716,500	5,159,000

Wool Markets.

There has been a fair amount of activity during the past week, though no large sales have been recorded. Any wools running to three-eighths or half blood, fleece or territory, are active. Manufacturers have bought more freely than ever before in the country on account of the short staple of the new clip. New wools are arriving so slowly and dealers are opening them so leisurely that offerings are not attractive enough to stimulate trade. The firmer London market and the light stocks of domestic wools have strengthened the views of holders greatly, and the outlook is more encouraging, except that dealers consider that the prices recently paid in the country were very high. Sales of the week included 1,000,000 pounds old scoured wool at 68@70 cents for fine and 65@66 cents for fine medium; new Idaho, in the original bags, at 70@72 cents for fine, 23@24 cents for fine clothing, and 25@26 cents for half blood; medium Utah and Wyoming at 26@27 cents, fine medium Utah at 24 cents, staple Oregon at 23½@24 cents, fine washed Ohio delaine at 39 cents, three-eighths and half blood Ohio fleece at 33@33½ cents, and Michigan three-eighths and half blood at 32 cents. Montana is now well cleaned up, not over 1,000,000 pounds of the new clip remaining unsold. Last sales were at 23@23½ cents for medium clips, with choice at 24¼ cents. The clip this year is 25 per cent. smaller than last season, and the new wool is just arriving in Boston. In California, choice northern has sold at 27@28 cents, with fancy at 28½ cents and middle counties at 22@23 cents. Eight-months Texas sold in the country at 23@24 cents, and twelve months brought 26@27 cents. Oregon is well cleaned up, and as the manufacturers bought very freely in Oregon this year, there will be little of the new clip from that state for the open market. The last sale was, at Elgin, at 20½@21 cents, with choice at 22½@23½ cents. The west is practically cleaned up. The London sales are strong, with fine merino 5@7½ per cent. above the previous sale, and a stronger tone in all wools. Americans are reported to be buying freely of all suitable wools.

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	July 12, 1907	July 5, 1907	July 13, 1906
American	2,015,465	2,138,037	1,500,461
Other kinds	1,263,000	1,315,000	1,233,000
Total	3,278,463	3,453,037	2,733,461

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	July 12, 1907	July 5, 1907	July 13, 1906
Great Britain and continent	2,028,000	2,137,000	1,430,000
Egypt	63,000	74,000	59,000
India	719,000	747,000	818,000
United States	468,000	495,000	425,000
Total	3,278,000	3,453,000	2,733,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	Last week	Last year
Week	15,079	25,325	46,608
Season	13,204,229	13,189,150	10,841,832

Boston Shoe and Leather Market.

Leather dealers report that shoe manufacturers apparently have carried over more than an average amount of stock, bought on rising prices, and are not yet in the market for purchases usually made at this time of the year. A fair business is being done in lots intended to go into spring samples. The production of splits has caught up with the demand, and offerings have been made of both finished and unfinished at 2 to 2½ cents under highest quotations. Shoe manufacturers have sold a good line of spring samples and taken some supplementary orders for fall goods, but buyers are very conservative about placing orders beyond immediate wants. While prices are held firmly to high figures, buyers are hoping for recessions soon and making plans to have just as few high-priced goods on their shelves as active concerns can possibly get along with. Shipments this week are over 13,300 cases less than same week last year. The *Shoe and Leather Reporter's* figures are as follows: Total for week, 82,252 cases; total for last week, 88,362; total for corresponding week last year, 95,575; total for 1907, 2,635,954; total for 1906, corresponding date, 2,747,187; decrease, 111,233.

NEW YORK STOCK EXCHANGE SEATS.

A seat on the New York Stock Exchange sold recently for $73,000. This is the lowest price since early in 1905 and might be used as a criterion of the prevailing sentiment as regards the securities market. According to the *Wall Street Journal*, "The trend of the stock market has always more or less governed the price of these seats. This is evidenced by the fact that in January, shortly after the beginning of the big bear market of 1907, a seat sold at $80,000. At the height of the big bull move of the winter of 1905-06 several seats sold at $95,000, and with the initiation fee of $2,000, made the price $97,000, the high-record mark.

"The irregular market since the panic of March, with rallies and reactions dividing the honors, was not conducive to an advance in Stock Exchange seats. Even the very recent upward swing had no effect. On April 30, after a good part of the smoke had cleared away, a seat sold for $79,500. The recent sale, therefore, represents a decline of $6,500 in the price.

"So far this year about six seats have been sold within a range of $80,000, in January, and $73,000, the last sale. Last year about sixteen seats changed hands. The high price was $95,000 in August, just after the Harriman coup, and one sold at the same price in September. The low sale was made at $78,000 in July, after the slump in the market following the San Francisco earthquake. In 1905, in December, the seats advanced from $85,000, the first of the month, up to $95,000, and at that time $97,000 was offered for a seat, but several who had seats for sale wanted over $100,000, at which price no sale occurred.

"The following table shows the high and low prices for Stock Exchange seats for several years past and for 1907 to date:

1907 (to July 12)	$80,000	$73,000
1906	95,000	78,000
1905	95,000	70,000
1904	81,000	57,000
1903	82,000	51,000
1902	81,000	65,000
1901	80,000	48,500

"To show how the aggregate value of all the seats on the Stock Exchange have enhanced in value, the following table is submitted. The average number of seats, now approximately 1,100, is used, and the high price each year is taken in computing the table:

	High price	Aggregate value
1907 (last sale)	$73,000	$82,300,000
1907	80,000	88,000,000
1906	95,000	104,500,000
1905	95,000	104,500,000
1903	88,000	96,800,000
1902	80,000	88,000,000
1901	50,000	55,000,000
1900	35,000	38,500,000
1879	20,000	22,000,000
1866	10,000	11,000,000
1863	4,500	4,950,000
1823 (500 seats)	25	12,500

"In 1823 the initiation fee was $10, while at the present time it is $2,000. The total number of seats have increased in value $103,550,000 from 1863 to the high of 1906—2,233 per cent. Of this $24,200,000 has been lost so far this year."

THE FINANCIAL CONDITION OF JAPAN.

The latest official figures place the population of Japan at 48,864,000, or about that of the United States in 1879. The revenues for the current year are estimated at $308,220,000, and the national debt is reported as 2,217,722,753 yen, the equivalent, in round figures, of $1,100,000,000.

Practically all of Japan's national debt is in the form of outstanding loan bonds, about equally divided between interior and foreign accounts. A part of the internal obligations is supported by collateral, such as state railways and other public utilities and industrial enterprises established or now owned by the government. Nearly all of the foreign loan, and a very large part of the total indebtedness, represents money obtained for the prosecution of Japan's wars with China and with Russia. Practically the whole of the interior loan, amounting to a little more than $500,000,000, bears 5 per cent. interest. There is a foreign loan of $48,815,000 at 4 per cent. for railways and public works. Of the foreign war loan $107,393,000 bears 6 per cent., $292,890,000 bears 4½ per cent. and $122,037,500 bears 4 per cent. The total foreign debt is $571,135,500. A part of the domestic loan also represents military and naval expenditures. In March of this year a loan of £23,000,000 at 5 per cent. for forty years was issued for the refunding of the 6 per cent. loans of May, 1904 (£10,000,000), and November, 1904 (£12,000,000).

The national revenues of the country have increased from a little more than $31,000,000 in 1880 to the estimated amount for the current year, $308,000,000. The sources of income are numerous and various. Among the enumerated taxes there appear the following: Land, income, business, liquor, soy, sugar, consumption of textile fabrics, mining, bourses, issue of bank notes, customs, traveling and succession. There is revenue from the telegraph and telephone service; from state railways; from monopolies in salt, camphor and tobacco; from tonnage dues and from forests. In the matter of its sources about two-thirds of the revenue is classed as "ordinary." The total land tax for the current year is about $43,000,000, the liquor tax about $33,000,000, the customs revenue $18,000,000, the income tax $11,600,000, the "receipts from public undertakings and state property," $63,380,000; receipts from salt monopoly, $13,600,000; from tobacco monopoly, $15,350,000, and railway profits, nearly $12,000,000.

The strain upon the taxpayers is indicated in the increase of national revenues, derived in large part from direct taxation, from $163,733,000 in 1904 to $308,227,000 for the present year.

A GREAT LOCOMOTIVE.

The *Scientific American* says: "A truly enormous express locomotive represents the latest effort of one of our leading railroads to keep pace with the ever-growing demands of its express passenger service. This company has just received the new locomotive from the shops and placed it in trial service in the hope that it will prove equal to the task of handling in one train passenger trains which otherwise must be run in two sections several minutes apart, or else handled by 'double-heading;' that is, coupling up two locomotives at the head of a train.

"The most powerful Pennsylvania standard express engines at present in service are themselves heavy and powerful machines, with cylinders twenty-two inches diameter by twenty-six inches stroke, which, on divisions having heavy grades, are capable of successfully handling trains made up of eight Pullman cars. But the passenger traffic has increased so rapidly that ten or twelve car trains are not unusual. The capacity of the Atlantic type, with four-coupled drivers, could not be increased sufficiently to meet the demands without adding considerably to the weight on the drivers. To gain the required capacity, therefore, it was found necessary to add another pair of drivers, and adopt what is known as the Pacific type of locomotive, in which the total necessary adhesive weight was realized without exceeding a load of 60,000 pounds on any one pair of drivers.

"The dimensions of the new locomotive greatly exceed anything hitherto built, or that would have been considered possible a few years ago. We all remember the great interest which engine 999, built especially for hauling the Empire State express of the New York Central Railroad, excited when she was exhibited at the Chicago World's Fair. Yet, to-day it would take two of such engines coupled together to do the work that can be performed by the new Pennsylvania engine; for the latter locomotive, with water in its boiler and in running condition, weighs 134.6 tons; its tender when loaded with eleven tons of coal and seven tons of water weighs seventy tons, making a total for the engine and tender of 204.6 tons.

"In order that the great power of the locomotive might be available at fairly high speeds, the drivers were made eighty inches in diameter, which is the same as that of the Atlantic type. The cylinders are twenty-four inches in diameter by twenty-six inches stroke, and the piston valves, which are operated by the Walschaert gear, are themselves sixteen inches in diameter. The valve gear, which has been carefully designed with a view to bringing its working parts into one plane, is provided with a special supporting frame outside of the link.

"The boiler tubes which are two and a quarter inches in diameter, are six feet longer than those of the Atlantic type, or twenty-one feet over all; and of these there are 343 whose combined heating surface is 4,117 square feet. As there are 205 square feet in the firebox, the total heating surface reaches the enormous area of 4,322 square feet. The coal is burned on a grate whose area is sixty-one and eight-tenths square feet. The maximum diameter of the barrel of the boiler is seventy-nine and three-quarter inches."

THE RAILROADS OF THE WORLD.

The statistics of the railroads of the world published in the June number of the *Archiv fur Eisenbahnwesen* give the mileage of the several continents as follows:

Europe	192,251	North America	253,098
Asia	50,503	South America	32,859
Africa	16,538	Australasia	17,441
Total	259,382	Total	303,398

making a grand total of 562,780 miles in the whole world at the end of 1905, or the nearest date for which reports are made. This is an increase of 12,525 miles, or 2.3 per cent., over the previous year, and is the smallest increase since 1900, it having varied since 1898 from 10,800 miles in 1900 to 16,754 in 1904, while the total additions to the world's mileage since 1898 have been 95,816 miles, an average of 13,688 miles yearly,

Of the increase in 1905, a little more than one-half was in America, 5,891 miles in North America and 426 in South America (including the West Indies). Canada is credited with 990 miles, against 533 the year before, but in Mexico the additions were but 150 miles in 1905, against 1,720 in 1904. In South America, Argentina opened 337 miles, Peru 39, Brazil 36, and the other additions were 12 miles in the West Indies.

In Europe, Germany opened 567 miles, followed by Austria with 466 and France with 430. Perhaps the most notable progress was in Belgium, already with the densest network, which added 3

per cent. to its mileage by building 135 miles, and in Spain, which opened 184 miles, which is more than in any previous recent year. European Russia is credited with but 165 miles in the year, which is the least for many years, and in the country which needs railroads most.

Progress in Asia keeps up, the 2,621 miles in 1905 being more than in any recent year, but not much more. None is credited to Russia, but in British India 1,052 were built and in China 1,019 miles. The latter is an increase of 83 per cent. in the Chinese mileage, and is significant. Japan is credited with but 270 miles, but Korea, which had but 37 miles in 1903, had 662 in 1905, and that is the work of the Japanese.

Only 480 miles were opened in Africa in 1905, but a great many different lines are under way on that continent.

In Australia 632 miles were opened in 1905. The prolonged drought had prevented growth there. It (including New Zealand) had built but 1,793 miles from 1901 to 1905. It, however, had but about 6,000,000 inhabitants, and the addition was at the rate of one mile to 3,350 inhabitants, while in the same four years the 21,224 miles in the United States added but one mile to 3,707 inhabitants.

"The *Archiv's* statistics of capital invested include all the European railroads except 915 miles, and show for them an average of $114,424 per mile. For the rest of the world the figures cover 83 per cent. of the mileage, the average investment in which has been $57,833 per mile. As in previous years, the capital invested in the railroads of this country is exaggerated by including the $2,638,000,000 which our railroad companies have invested in other companies' stocks and bonds with what they have invested in railroads," says the *Railroad Gazette*. "In this way, for instance, the $120,000,000 which the Union Pacific has paid for the securities of other companies is added to the face of the securities which it has bought with that sum, while those securities are still counted as representing the investment of the companies which issued them. Allowing for this, the capital per mile of United States railroads was $53,355, instead of the $65,475 reported.

"The lowest capital per mile in Europe was $33,214, in Finland, a narrow-gauge system owned by the state. The British railroads, of course, have cost most—$264,185 per mile. The investment in their 22,433 miles is considerably greater than in all the railroads (90,300 miles) in Asia, Africa, Australia and America, excepting that in the United States. Next comes Belgium with $164,698 per mile; France, $121,361; Austria, $107,704; Switzerland, $103,796; Germany, $101,488; Italy, $100,151; Russia (in 1903), $79,419.

"Outside of Europe the low cost of the railroads of British India may be noted—$30,905 per mile. The Japanese railroads cost a little more.

"The aggregate investment in all the railroads in the world in 1905, as nearly as can be ascertained, was $40,744,000,000, which is a mighty sum, indeed, yet amounts to but about $27 per inhabitant. But the railroad capital per inhabitant is $52 in Europe, and no less than $135 in the United States. This, be it understood, does not include street railways, trolley lines and their like. The increase in the world's railroad investment during the last year reported was just about $1,000,000,000. As Africa and Asia have only fairly begun to build railroads, and as in Asia especially there is actual need for scores of thousands of miles more, while the improvement of old railroads in new countries is also a pressing necessity, it is easy to see that the world will find use for its savings for some time to come, and if peace is maintained rapid progress may be expected."

EXTERMINATION OF THE SHAD.

The Washington correspondent of the New York *Tribune* says: "So insatiable has been the ever increasing demand of the public for shad, and more particularly for shad roe, and so energetic have been the fishermen in their attempts to meet that demand, that with the opening of the shad season in the Potomac there is row after row of fish traps and nets set for miles beyond the mouth of that stream, and the fish, in its attempt to reach fresh water that it may reproduce itself, will have a greater task than the threading of an oriental labyrinth. Millions of them will be caught and their spawn will go to the tickling of the pampered palate of the epicure, who will thoughtlessly devour hundreds of thousands of embryo fishes that eventually might have fed multitudes. The bureau of fisheries, in its effort to counteract the rapacity of the consumer and the fisherman and prevent the complete extermination of the shad, will probably encounter difficulties this year greater than ever faced before.

"The figures for shad propagation show that there was a time when the bureau was able to capture as high as 210,000,000 eggs in the Susquehanna river, as opposed to 8,000,000 last year. On the Delaware river, where the catch has gone as high as 115,000,000, it last year fell below 500,000, while on the Potomac it fell from 68,000,000 to 12,000,000. Similar conditions exist in all the streams along the coast, and are growing rapidly worse.

"This condition is due not to the absence of captured fish or to inactivity on the part of the bureau, but to the improved methods at present used by fishermen in capturing the fish. The shad always spawn in fresh water, and in April and May they come into the rivers and their tributaries in search of spawning grounds. At other seasons of the year they live in the open waters of the ocean. In the spawning season they were known to be so plentiful years ago in the Potomac and tributaries of the Chesapeake that it was with difficulty that a boat could be pushed among them. Captain John Smith found them so when, in early Jamestown days, he pushed a small boat up the Potomac to a waterfall above Washington which stopped their advance. His report of this finding was one of the early wonders of America that was carried back to England.

"This 'running' of the fish arises from the fact that their eggs are rendered worthless if they come in contact with salt water, so the instinct of the fish causes them to seek the inland streams, and, as a consequence, in the spawning seasons these streams are alive with them when they are not interfered with. The knowledge of these facts on the part of the fishermen is, however, the downfall and the doom of the shad, for the fishermen have taken advantage of the annual pilgrimage to fresh water and have set their nets and traps accordingly, and when the fish start for fresh water they are brought into captivity and are quickly transported to market.

"This fact was not, in the beginning of the operation of the bureau of fisheries, such a material disadvantage, for the fishermen had not then gone beyond the mouths of the rivers, and great numbers of the fish caught spawned while in captivity and the spawn was artificially hatched and used in restocking the streams. But now this process is not possible, for the reason that the nets are placed far beyond the mouths of the rivers, and if the fish are caught and held in captivity, in the meantime spawning, the spawn immediately comes in contact with salt water, which means the death of the life germ in the egg. The fishermen who formerly set their seines in the waters of the streams have found that more enterprising fishermen have gone still further down and are catching the fish ahead of them. This has led the first fishermen to go ahead of the second, and the process has continued until they have got as far to sea as it is possible to set a net. For miles beyond the point where the Potomac opens out into the sea each wing of its widening mouth is skirted by one line after another of traps. Beginning with a shore, a long wing of nets will reach out, intended to stop the fish as it follows the shore in search of fresh water and guide it into the trap at its end, which it enters as a mouse enters the ordinary trap and is unable to find the way out.

"At the termination of one trap another begins, and the series is continued far to sea, or until the channel of navigation is encountered, which may not be obstructed. Back of the first row of traps a rival fisherman will erect another series, which will bar the way of the fish that has escaped the first, and so on without end. But after the traps have been passed by an almost impossible running of the gantlet and the waters of the streams have been reached the troubles of the shad have not yet ended, for here the fishermen who operate with a seine are encountered in great numbers. The fish that reaches the spawning ground is the exception rather than the rule, and, as a consequence, the extermination of the shad seem inevitable.

"Shad on the market are little less plentiful now than in former years, but this fact is due not to an equal abundance in the streams, but to the improved facilities on the part of the fishermen in capturing them. The demand for the fish has steadily increased, and the popularity of shad roe has led to increased activity on the part of the fishermen. The probabilities are that both the fish and the roe will, in a few seasons, become a rare luxury, and its total exhaustion is regarded as a matter of comparatively few more years."

BRADSTREET'S

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY.

Henry E. Dunn, President; Charles L. Beckwith, Secretary; Charles M. Clark, Treasurer.

NOS. 346 AND 348 BROADWAY, NEW YORK.

Berlin, 23 Charlotten-Strasse.
London, 137 Cheapside, E. C.
Melbourne, 231 Flinders Lane.
Paris, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE.
Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JULY 27, 1907.

Less was done than had been expected at the plenary session of the Peace Conference held at The Hague on Saturday last. The only final action taken was the approval of the proposal for the adaptation of the Red Cross regulations to naval warfare. The American proposal regarding the permanency of the conference was not presented, for the reason that the able and experienced diplomats having it in charge deemed it wise to consult further with other leading delegates with a view to insuring its acceptance. At a session of the committee on arbitration held a few days later, several of the South American delegates supported the proposal of the United States regarding the collection of contractual debts. On the same occasion Baron Marschall von Bieberstein, of Germany, spoke strongly in favor of the American proposal to give The Hague court the character of a real and permanent tribunal. Once the permanent court is established, he said, with judges whose character and ability will inspire universal confidence, it will exercise a power which cannot fail to attract countries that have judicial differences to settle. President Nelidoff expressed himself on Tuesday as anxious to have as much work as possible accomplished before August 1, because of the desire of a majority of the delegates to leave The Hague by that date.

It was expected until a week ago that the movement of iron ore for the current season would reach a total of 42,000,000 tons, thus eclipsing any previous record, but unfortunately a strike of dockmen at the upper Lake Superior shipping ports, followed by a strike of ore miners, renders such a record improbable, it being figured that shipments have already been reduced 2,000,000 tons as the result of the strike. While the disturbance has had no particular influence on pig-iron production as yet, the furnaces being pretty well supplied with ore, it is conceivable that if the strike continues, outputs will be curtailed. However, the signs are that the dockmen's strike, which was ordered despite an agreement to work at a certain wage until November 1, is collapsing. The ore miners' strike appears to have been even more unjustifiable than that of the dockmen, because the former made certain demands for advanced wages and shorter time, and within a few hours and before an answer of any kind could be given them they went out. One result of the nearly simultaneous strikes of these two bodies of workers has been the almost total suspension of shipments of ore and the idleness of thousands of men far outnumbering the comparatively small body of men striking in the mines and on the docks. The ore miners' strike, like that of the dockmen, shows signs of a premature ending. From the standpoint of the disinterested outsider, the strikes seem to be ones where the strikers themselves will be the chief losers, though, of course, other workers will be affected unfavorably. A rather dull and sagging pig-iron market seems to have been given support through the medium of the strikes.

Little desire for the exercise of the elective franchise seems to be felt by the Filipinos, at least those resident in the city of Manila, according to cable dispatches received by the Bureau of Insular Affairs of the War Department. The fact is disclosed that out of a total population of about 220,000 in that city, only 7,902 persons have expressed a desire to vote at the election which takes place on Tuesday next, and of these 865 are Americans. The election to be held is for the choice of members of the new Philippine Assembly, and the occasion will furnish the first opportunity the Filipinos have had for the exercise of the privilege of choosing general representatives—a privilege highly valued in most other countries. The officials of the Insular Bureau are surprised at the lack of interest shown in the approaching election, particularly in Manila, where the percentage of educated persons is larger than elsewhere in the islands, and their surprise is certainly very natural.

On Thursday the new treaty with Santo Domingo was proclaimed both in the United States and in the Dominican republic. This treaty, which provides for the assistance of the United States in the collection and application of the customs revenues of Santo Domingo, was signed early in February, and after no little opposition was ratified by the Senate at Washington before the close of that month. Ratification by the Dominican Congress was delayed until early in May, and was accompanied by the adoption of certain explanatory paragraphs which for a time occasioned some doubts as to the completeness of the ratification. These, however, have since been set at rest. The treaty provides substantially for the continuance of the plan under which the revenues of the islands have been collected by American agents under the protection of the United States, and a portion of the receipts segregated and applied to securing the foreign creditors of the Dominican republic. The benefits accruing both to the republic and its creditors under the arrangement have been strikingly shown by figures made public by the Washington authorities.

Reference was made in these columns some time ago to the fact that the new tariff agreement with Germany had elicited some criticism on the ground that under it certain classes of goods imported from Germany were likely to be undervalued and brought into competition with American goods supposed to be protected by the tariff. This criticism has received definite formulation in a resolution adopted by the board of managers and executive committee of the American Protective Tariff League, which declares that while the customs administrative act provides that all ad valorem duties shall be assessed at the actual value in the principal markets of the country from which the goods are exported, the new agreement construes the market value to be the price fixed for export whenever the merchandise is sold wholly for export. In the agreement, the resolution asserts, the executive branch of the government has waived the requirement imposed by the legislative branch that foreign manufacturers shall show the cost of manufacturing. The agreement is declared to be contrary to law, as well as to the policy of protection.

Under the amended regulations regarding denatured alcohol, which will go into effect on September 1, manufacturers using completely denatured alcohol are not to be required to swear to applications for permits; permits when secured will continue until revoked, and retail dealers in denatured alcohol will not be required to keep a record of any kind. In addition to denaturing warehouses on distillery premises, central denaturing warehouses may be constructed at such points as business interests may require, and alcohol may be transferred from denaturing warehouses by means of tanks or tank cars to consumers. Industrial or farm distilleries are allowed to produce alcohol from anything that contains fermentable material. Manufacturers using specially denatured alcohol are relieved from keeping a record of the goods in the manufacture of which it is used, and proprietors of industrial distilleries and manufacturers recovering alcohol in manufacturing processes where only a small quantity of alcohol is denatured are not required to provide themselves with denaturing material rooms or to have the denaturants regularly tested.

One of the clauses of the new law affecting citizenship which went into effect on July 1 provides that when any naturalized citizen shall have resided for two years in the foreign country from which he came it shall be presumed that he has ceased to be an American citizen, and that his place of general abode shall be deemed his place of residence during those years. This provision has, it appears, aroused interest among a not inconsiderable number of persons who, having been naturalized under the laws of the United States, have been for some time residing abroad, and who fear that they may lose their American citizenship in consequence of their continued foreign residence. It is explained, however, that the presumption of non-citizenship may under the law be overcome on the presentation of satisfactory evidence to the contrary before a diplomatic or consular officer of the United States, so that no injustice need be done to those who wish to retain their citizenship with the privileges and the duties which it involves.

An interesting decision in connection with the making of through routes and joint rates was made by the Interstate Commerce Commission last week. The decision was rendered in a proceeding in which a transportation company sought to compel the Pennsylvania Railroad and another to make with the complainant a through route and joint rate for the transportation of fish from Jamestown, R. I., to Philadelphia. The commission found that no satisfactory through route existed between the points named, and it made an order for the establishment of a through route and joint rate as suggested, fixing the latter at not more than 34 cents a hundred pounds. The commission provided in its opinion, however, that if it wished to do so, the Pennsylvania Railroad Company might apply to that body for an order requiring the complainant to indemnify it against any loss it might suffer in the premises by reason of the financial irresponsibility of the complainant. This seems a sound regulation which circumstances may at times render desirable, and which will prevent the imposition of joint duty without something in the way of security to insure responsibility.

THE LEGAL CLASH IN NORTH CAROLINA.

The legal issue in the North Carolina railroad litigation was presented clearly in the decision rendered by Judge Pritchard in the United States Circuit Court at Asheville on Monday, when he directed the discharge on habeas corpus proceedings of two ticket agents who had been previously sentenced by a local court to thirty days on the chain gang for violation of the new rate law. Judge Pritchard directed attention to the fact that it having by proper order directed that the railway company should provide a ticket with a coupon attached thereto representing the difference between the present rate and the proposed rate, it thereby became the duty of the company and its agents to comply strictly with the requirements of such order, and that any failure on their part to observe the same would render them liable to attachment for contempt. On the other hand, such duty being enjoined by the United States Circuit Court, the performance of the same by the company and its agents would not render them liable to punishment under the statute of the state.

Any attempt, Judge Pritchard continued, to punish the company or its agents for the observance of the order and decree of his court would not only be in utter disregard of the comity which should exist between the state and federal courts, but would be an absolute nullity. If, he added, the state courts possessed the power to indict persons acting under the directions of the federal court for the performance of a duty enjoined upon them in a suit which might be brought in such court, then the power of the circuit courts of the United States would be completely paralyzed, and such courts would be rendered unable to proceed to the determination of any question involving the validity of a statute of a state. Disclaiming any intention to impute improper motives to the state officials, Judge Pritchard nevertheless declared that his court was confronted with open and avowed opposition on their part, and that if the prosecutions instituted by them were permitted the injunction granted by him would be nullified and the jurisdiction of the court practically defeated.

Proceeding to a consideration of the penalty provision of the North Carolina law, which provides, among other things, that for each failure to comply with the requirements of the act any railroad company shall be liable to a penalty of $500, recoverable by the person aggrieved by such violation, Judge Pritchard declared that it imposed upon the company as a penalty for an unsuccessful attempt to appeal to the court such enormous fines and penalties as to burden the challenger of the act in the courts, so as to make it, if the penalties were valid, practically impossible for such an appeal to be made. The effect of the section would be, the judge said, to close the doors of the courts to a judicial inquiry as to rates, and he therefore held it unconstitutional and void.

The last few days have been taken up with conferences between Governor Glenn and his advisers and the railroad companies concerned and their counsel, and a third element has been injected into the situation by the appearance in North Carolina of Assistant Attorney-General Sanford of the Department of Justice with propositions looking to some kind of a temporary settlement pending the prompt preparation of appeals to the Supreme Court of the United States. These conferences, it must be said, have thus far led to no satisfactory result. In his earlier utterances Governor Glenn took the ground that the rate law was constitutional; that it should be obeyed by the railroads, and that the cases instituted in the state courts should take their course through those courts to the state court of last resort, whence they might be brought by appeal to the Supreme Court at Washington. These conditions are substantially reiterated in some counter proposals submitted by him after rejecting those suggested by Mr. Sanford. In the event of his proposals being refused, the governor says, there will be nothing left for him to do but to execute the state law as best he can, and he may call an extra session of the legislature to deal with the situation. The probable course of the federal authorities has not been disclosed; their ultimate action must, it would seem, be largely shaped by further developments in the controversy.

THE CHANGE IN KOREA.

The transfer of the Korean throne to the new Emperor was attended with no little disturbance, as is indicated in the dispatches which have come from Seoul. Immediately upon the announcement of the ex-Emperor's abdication serious riots broke out in the city which resulted in the killing of a number of Japanese and probably of some Koreans, though the casualties among the latter were not enumerated in the early reports. Documents of an inflammatory nature attacking the Japanese were widely circulated, and at one time a mob of five thousand attempted to enter the palace. This crowd was driven back after some fighting, in which Japanese troops called out for the defense of the palace appear to have participated. All traffic was stopped and the shops of Japanese were placed under guard. Early on Friday night the Emperor sent a message to Marquis Ito in which he expressed regret at the commotion excited by his subjects, and declared that he relied on the Marquis to take measures to prevent further trouble.

Rioting was resumed on the following day, when the rage of the mob seemed to be specially directed against the members of the Korean Cabinet. The residences of some of them, including that of the Prime Minister, were sacked and burned, but an attack on the home of the Minister of War was repulsed by Japanese guards with the aid of artillery. A proclamation warning the people to remain in their houses was issued on Saturday evening, but Marquis Ito hesitated to proclaim martial law, being desirous to avoid interference except so far as might be necessary to protect foreigners and the Emperor. Owing to the proximity of some of the foreign consulates, including that of the United States, to the palace, Ito made an offer of protection, but Consul Sammons in reply said that he would leave the matter of protecting Americans to the discretion of the Marquis. A decided element of weakness in the situation was the untrustworthiness of the Korean army, the best regiment of which was ordered to be disarmed on account of having furnished mutineers for the first day's rioting. The Japanese troops are believed to be efficient, but at the outset they were too few in number to suppress a revolt or to disarm the Korean troops suspected of disaffection. The situation quieted down somewhat on Sunday, though the authorities were apprehensive because of the constant influx of people from the country outside, where also attacks on Japanese were expected to follow the news of the abdication. On Monday came the news of the discovery of plots in the palace and of the arrest of several prominent Koreans, with the declaration by the Minister of War that he had no control over or communication with the army.

It is noted that the Japanese Residency disclaims any responsibility for the arrests mentioned. Marquis Ito on Friday declared emphatically that when the Emperor and Cabinet were weighing the question of abdication he refused any participation, but upon being asked for his opinion by the then Emperor, replied that the matter wholly concerned the Emperor of Korea and not himself as the representative of Japan. The Cabinet's entire course of action, he added, was based on its own initiative. To the same effect was a statement by Viscount Hayashi, the Japanese Foreign Minister, who declared that while the abdication of the Emperor occurred simultaneously with his arrival in Seoul, it disappointed his plans. Japan, he said, had no part in the abdication, but on the contrary, if consulted, would not have advised it. Japan's programme in Korea, he added, would be executed with regard to due forms and with the consent of the constituted sovereign.

Notwithstanding the disturbed condition of the country, negotiations between Japan and the new government of Korea have been pressed to a prompt conclusion. On Wednesday some Japanese warships with reënforcements arrived at Chemulpo, and early on Thursday morning a new convention was signed which apparently gives Japan a more complete control over Korean affairs. According to report, the administration of Korea is to be under the guidance of the Japanese Resident General, whose approval is made a prerequisite to the enactment of all laws and ordinances, and to the appointment of all high and responsible officials, and whose recommendation is made necessary to eligibility for office in the Korean government. To all appearance little else remains to be secured by Japan in the Hermit Kingdom. The substance of power, at any rate, seems to be in the hands of her representative there.

STRIKES AND LOCKOUTS.

It seems as if the Bureau of Labor of the Department of Commerce were giving out some rather belated information when it reports, as it has this week, that 1905 saw less injury and interruption to industry from strikes than in any preceding year back to 1892. That branch of the government's statistical machinery reports that in 1905 176,337 persons struck work, rendering idle something like 221,686 persons. It is significant of the publicity given strikes of late years that BRADSTREET'S at the close of the last week of 1905 reported the number of persons rendered idle by strikes during that year at 200,000, but it is none the less gratifying to learn at this late date from government statistical sources that BRADSTREET'S total, confessedly only a partial one, was so near the actual figures.

There are some other features of the bureau's summary which, while not exactly news, will bear repeating. Thus it is stated in the summary that strikes and lockouts are most common in the great industrial states, which seems only what might naturally be expected, as is true also of the added statement that 69 per cent. of the strikes of the past twenty-five years were ordered by labor organizations. It is further added that strikes ordered by labor organizations are more successful than those not so ordered. Thus one-half of the past twenty-five years' strikes ordered by labor organizations were successful, while only one-third utterly failed, whereas only one-third of all strikes not ordered by organizations was successful.

We believe there is room for difference with one rather bald conclusion of the bureau, to the effect that employees striking succeed more often than they fail. This may be true in some years, or in a collection of years, when conditions favor the workers, as, for instance, in years like 1903, 1904 and 1905; but we doubt whether the same is true of years when adverse conditions rule, such as in 1892, 1893 and 1894. In fact, it may be seriously questioned whether the bureau's twenty-five years' totals were not seriously warped by the notable successes of a year like 1902, for instance, when outside pressure brought to bear, as in the case of the anthracite coal-miners' strike, resulted in a victory for the employees. A significant offset to the bureau's statement is perhaps readily found in the sentence following, which says that where employers took the initiative and locked out their men the employers won more often than they lost. Here again the conditions ruling in the general labor market would seem to contain the real reason for the success or failure of either employees or employers in their contests. It is doubtful if there is much comfort to be drawn from the fact that only about 2 per cent. of all the strikes and lockouts of the five years from 1901 to 1905 were settled by arbitration, these, by the way, being largely in the building and coal industries. It really seems an astonishingly small percentage, considering the vogue which arbitration as a means of settling labor disputes has had of late years.

THE HARRIMAN LINES' EARNINGS.

Preliminary statements of the Union Pacific Railroad Company's earnings and those of the Southern Pacific Company for the fiscal year ending June 30, 1907, were made public at the end of last week. Judging from the monthly gross and net earnings statements of the two companies, which have appeared in regular course, the financial world was prepared for very favorable results when the revenues and expenditures of the two companies for the full twelve months were exhibited. The actual outcome in this respect has, however, outrun expectation. In fact, the showings, besides exceeding all previous records of the organizations in question, are looked on as among the most remarkable ever made by American railroad corporations, and have been the objects of

much comment. The figures, compared with those of the two preceding fiscal years, are as follows:

UNION PACIFIC PRELIMINARY (ESTIMATED) INCOME ACCOUNT FOR THREE YEARS.

Year ending June 30	1907	1906	1905
Gross	$75,781,115	$67,281,542	$59,324,949
Expenses and taxes	42,222,500	36,963,773	31,862,714
Net	33,558,615	30,317,769	27,462,235
Other income	*11,028,288	10,329,815	6,496,759
Total income	44,586,903	40 647,584	33,958,994
Fixed charges	8,652,622	8,882,911	11,173,487
Balance	35,934,281	31,764,673	22,8-6,652
Preferred dividends	3,982,006	3,982,032	3,982,810
Surplus	31,052,275	27,782,641	12,802,697
Common dividends	19,548,790	15,550,392	7,104,254
Surplus	12,403,485	12,232,249	5,698,447

* Does not include dividends amounting to $2,015,000 declared since July 1, 1907, for account of year ended June 30, 1907, on shares of Atchison, Topeka & Santa Fe, Baltimore & Ohio and Illinois Central.

SOUTHERN PACIFIC PRELIMINARY (ESTIMATED) INCOME ACCOUNT FOR THREE YEARS.

Year ending June 30	1907	1906	1905
Gross (rail and water)	$124,864,440	$105,632,549	$95,515,158
Expenses and taxes	82,578,907	70,585,189	65,973,436
Net	42,285,533	35,047,360	29,541,722
Other income	3,665,365	3,324,672	2,625,424
Total income	45,950,898	38,372,032	32,167,146
Fixed charges	19,423,833	19,179,385	19,735,173
Surplus	26,527,065	19,192,647	12,431,973
Preferred dividends	2,769,879	2,769,879	2,769,431
Balance	23,757,186	16,422,768	9,662,542
Common dividends	9,892,463	4,946,246	....
Balance	13,864,723	11,476,522	9,662,542
Loss San Francisco and surv	....	357,684	1,407,801
Surplus	13,864,723	11,118,838	8,254,741

It will be noted that the increase in the Union Pacific gross earnings for the fiscal year 1906-07 is equivalent to 12¾ per cent., and that the net gain is 10.82 per cent., while in the case of the Southern Pacific Company the gross increases 18¼ per cent. and the net 20⅝ per cent. Moreover, after providing for fixed charges and dividends on its preferred, the surplus of the Union Pacific applicable to payments on its common shares would be 17 per cent. on the latter, and this, it is to be observed, does not include about $2,000,000 for dividends declared since July 1, 1907, on the shares of the Atchison, Baltimore & Ohio and Illinois Central belonging to the company. Taking into further account the equity which the Union Pacific would have in 45 per cent. of the surplus earnings of the Southern Pacific, the sum available for dividends on Union Pacific common would be equivalent to over 21 per cent. on the latter. It might be added that the statement is claimed by the supporters of the company to be moderate and conservative, and that the full annual report will be even more favorable in its general character.

From the standpoint of the stock market the chief interest in the matter resides in the unexpectedly large earning power which is shown by the Southern Pacific Company. That organization, it will be recalled, began the payment of semi-annual dividends of 2½ per cent., or at the rate of 5 per cent. per annum, on its common stock only as lately as October, 1906. The fact that the surplus earnings shown by the preliminary statement are equal to 12 per cent. on its common stock gave rise to confident reports in the stock market that the approaching dividend meeting of the company's directors will result in an increase of the rate to a 5 per cent. or 6 per cent. yearly basis. In fact, the head of the company's management, Mr. Harriman, is quoted as intimating rather broadly that he favors such action, and Wall street, therefore, entertains little doubt that the dividend will be increased at the directors' meeting which is scheduled for next Thursday. As in the case of the Union Pacific's figures, it is pointed out that the Southern Pacific's showing does not take into account the undistributed surpluses of subsidiary companies or the credits to profit and loss account from real estate sales, etc., which, on the basis of last year's items of that kind, would bring the amount available for dividends on the Southern Pacific's stock up to over 13½ per cent. It is also a matter of current discussion on this head that the San Francisco earthquake and fire, instead of being a cause of loss and reduced earnings to the so-called Harriman railways, has actually increased the latter. In fact, the claim is that a large volume of freight traffic which would ordinarily have been purchased on the Pacific coast or shipped around Cape Horn has been routed by the transcontinental railways, and that the Union Pacific-Southern Pacific system has obtained the larger share of the same.

ANOTHER POSSIBLE BURLINGTON DEAL.

Although Wall street's well-known proneness to formulate imaginary combinations and deals in the railroad world has to be taken into account, there seems to be a disposition in that quarter to regard a readjustment of the relations between the Great Northern and the Northern Pacific railway companies in relation to their joint control of the Chicago, Burlington & Quincy as being more or less of a possibility. It will be recalled that when the Hill-Morgan financiers executed their famous coup in 1901, a transaction which precipitated the Northern Pacific corner and stock-market panic of that year, they acquired control of the Burlington by offering the holders of the latter's $110,839,100 of stock $200 per share for the same, payable in 4 per cent. collateral trust bonds, secured by the stock thus purchased and guaranteed jointly by the Great Northern and Northern Pacific. The shares thus exchanged for the joint 4s now amount to $107,611,600, leaving only $3,227,500 of the stock in the hands of the public, or a little less than 3 per cent. of the total.

That the Burlington property has prospered exceedingly under the joint control is indisputable. In the six years following the deal the funded debt of the system has increased only about $28,000,000, while the expenditures for betterments and improvements, largely derived from earnings, have exceeded $65,000,000. In the same period the net income has risen from $17,900,000 to over $23,000,000 per annum, an increase of $5,000,000, or nearly 29 per cent., while the surplus over dividends and charges, which was $1,472,000 in 1901, was $3,907,000 for the fiscal year ending June 30, 1906, a gain of $2,434,000. It should be noted that the charges for 1906 include 7 per cent. dividends on the stock held by the public, as well as the 4 per cent. interest on the $215,222,000 of the joint 4 per cent. bonds, representing the stock owned by the Northern Pacific and Great Northern. Moreover, the standard of the road's management has been raised in accordance with the principles usually followed by Mr. J. J. Hill in connection with his railroad properties. It nearly doubled its tonnage in the six years, increased its train-load from 200 tons to about 450 tons, and in other respects has been made one of the most valuable railroad properties in the west.

Various reasons are assigned for the alleged desire on the part of the financiers interested in the Great Northern and Northern Pacific to end the joint control and transfer the ownership of the Burlington to one of the two controlling companies. While it cannot be said that the Burlington system is a parallel or competing line to either of the controlling roads, their exercise of a joint ownership in 97 per cent. of the stock might be construed under some circumstances as affording ground for interference by the national or state governments. The story which Wall street now hears repeated, in the face of all denials from official sources, is that the intention is for the Northern Pacific to sell its equity in the Burlington stock to the Great Northern. In fact, the idea finds more or less belief that the only obstacle to the working out of such a scheme is that the financial situation is adverse to the raising of the requisite new capital by the Great Northern. At the same time it is intimated that there are legal features of the matter which cannot readily be solved, and it would seem, in any event, that a considerable time will elapse before a definite plan will be submitted, even if the street is correct in its theory regarding the attitude of the interests identified with the properties in this important matter.

ENGLAND'S COTTON-GOODS DEMAND SLACKENING.

Manchester, July 12.—June was one of the quietest months in cotton-goods buying experienced for some years past, the result being that order lists are lighter than at any time for twelve months past. Manufacturers are naturally getting anxious about the future. As a matter of fact, short time is being worked in most districts; that is to say, weaving firms have agreed to stop a fortnight in addition to annual holidays. Not only are manufacturers receiving few bids from abroad, but yarn prices are so high that to sell cloth and buy yarn to-day means in most cases a slight loss. The present is undoubtedly a most unsatisfactory time for manufacturers if they have to sell and take fresh orders. Home trade, owing to the unseasonable weather, has not helped the market. Huge stocks of light and fancy materials are to be met with. Distributing houses have received most discouraging accounts from their country travelers. Retail shops are depressed, and it looks as if the summer was about to pass without a season's trade.

It is calculated that 400,000 looms will stop fourteen days extra before the end of October, in addition to annual holidays, owing to the poor cloth demand and to the yarn scarcity. To-day it is rumored that spinners are about to counteract this movement by arranging a spell of short time. This will, perhaps, be difficult to bring about, as spinners are doing better at the moment than weavers.

Home trade American yarns have continued profitable to the spinner, the margin of gain being wide and most satisfactory, but the tendency this week is for producers to lose their profit. This tendency is not very marked, but it looks as if yarns had seen their best for a time. Owing to the activity of the continental export trade, spinners are not doing badly by any means. It remains to be seen later on, when the effect of the weaving stoppage is experienced, whether spinning will be able to hold its own.

The exports of cloth for six months were 3,136,000,000 yards, as against 3,117,000,000 yards in the corresponding period of last year, and 3,005,000,000 yards in the first six months of 1905. It has been a big half year for Turkey as well as for Egypt, but China shows only 317,000,000 yards, against 368,000,000 yards in the corresponding period last year, and 427,000,000 yards in the first half of 1905. India kept up her takings, and so have the principal smaller outlets. A feature is that while less gray cloth was shipped, more bleached and printed kinds were exported.

Exports of yarns for six months were 113,000,000 pounds, as compared with 105,000,000 in 1906 and 98,000,000 in 1905. Germany absorbed 50 per cent. more this year than last, and Russia also has taken more freely. There is a falling off in India and China and Japan of an important character, but owing to the continent's increased takings the total figures gain as stated.

It is interesting to note that we continue to export an increasing quantity of textile machinery. Last month shipments were worth £610,000, as compared with £421,000 in 1906 and £404,000 in 1905. The total for the past six months was £3,793,000, against £3,152,000 in 1906 and £2,487,000 in 1905. Most of our foreign outlets have increased their takings, notably Russia, France and Japan. The figures for America are £330,000, as compared with £289,000 last year and £181,000 in 1905. W. T.

AMERICAN RAILWAYS AS INVESTMENTS.*

In view of the ever-growing desire for knowledge, there is some excuse for the appearance of various books on the subject of investments, the latest of which we have seen being "American Railways as Investments," by Carl Snyder. This work is a treatise in which financial science is applied to railway investments; it differs from the well-known statistical manuals in general use, in that the author has taken a mass of what might be termed undigested data and reduced the whole to a more easily understood basis. The general scheme of the work covers the important characteristics of railways, their history, territory traversed, ownership, affiliations, capitalization, including rentals and leases; value of equities owned, style of capitalization, increase of capitalization since 1900, character of traffic, stability of earnings, dividend record and investment value.

While discussing the subjects under the various heads mentioned, Mr. Snyder points out that net earnings of American railways are about 6 per cent. upon their net capital, which, according to the author's method of reckoning, is the net capitalization less the assets. He regards 75 per cent. of the properties as being sound and stable. Mr. Snyder believes that there is practically no overcapitalization, in that the roads could not be reproduced for their net capitalization. In speaking of the future of prices and the cycle theory, Mr. Snyder declares that the general theory of the business cycle is now so well established

* A Detailed and Comparative Analysis of All the Leading Railways from the Investor's Point of View, with an Introductory Chapter on the Methods of Estimating Railway Values. By Carl Snyder. New York: The Moody Corporation. Pp. 760. $3.20.

that "the business man or investor who would disregard it would be in much the same position as the farmer who would ignore the course of the seasons." This is a pretty broad statement, for while the farmer has no control over the seasons, any one of a hundred things might occur to upset the theory of cycles. It is true that history tends to repeat itself at irregular intervals, though not always in a directly analogous way, but the doctrine of the periodicity of cycles per se is hardly accepted as a scientific fact. Moreover, the chapter on the outlook for 1907 savors too much of guess work and the personal opinion of the author to be accepted as a criterion; but while one may desire to refrain from accepting predictions covering a series of years to come, one cannot but hope with the author that stock-market fluctuations in the period from 1902 to 1922 will be rather less violent than in the preceding cycle, and that in each succeeding twenty-year period fluctuations may tend to be within narrower limits. We may say that much of the subject-matter contained in the work under review is material with which those familiar with the technique of market conditions, railway reports and investments are conversant. Nevertheless, the author lays down many rules, methods and formulæ for understanding a railway report, particularly in its bearing on investments, which may be found of interest, the whole being put in a concrete and simple form. The book gives analyses of the essential factors contained in the reports of nearly one hundred railways, the aggregate mileage of the same being about 200,000 miles. The work should appeal to the investor, broker, banker or student of railway economics who may be in quest of another viewpoint than his own.

EDITORIAL NOTES.

A decision of considerable interest was rendered by the Interstate Commerce Commission last week in a case which involved the right of a railroad to divert traffic from one cotton compress to another—a right which the commission holds a railroad does not possess. In a complaint by the Muskogee Commercial Club and the Muskogee Traffic Club against the Missouri, Kansas & Texas Railway, it appeared that the defendant carried cotton to South McAlester to be compressed, though it might more easily have been compressed at Muskogee. The commission held that the defendant's rule for the compression of cotton in transit resulted in undue prejudice against Muskogee, and that the defendant should grant to one compression point all the privileges it granted to another. The commission further held that the fact that the compress company at South McAlester had another compress at Fort Smith, and threatened, unless preference was given to its compress at the former place, to divert its cotton traffic to another railroad, did not justify discrimination in the rules or practices of the defendant company. In its opinion the commission said that the compression of cotton in transit is not a matter with which a railroad may deal entirely without respect to the effect which its practices have upon the transportation of cotton. Either the carrier must publish a rate upon uncompressed and another rate upon compressed cotton and divorce itself entirely from the matter of compression, or else such compression as is given by the railroad becomes subject to the jurisdiction of the commission, and where a railroad company declares a policy which allows compression of cotton in transit at the nearest point, it cannot vary that rule so as to give certain shippers the opportunity to avoid it and thereby receive an advantage which is not given to shippers generally.

Final returns of exports of food-producing animals, meats and dairy products, given in another column, bear testimony, apparently, to the effect of high prices on our sales of these products as well as to the agitation of last year regarding slaughter-house conditions in this country. Thus the values of our exports of animals and provisions of all kinds fell off by 7.3 per cent. from the total of the preceding fiscal year, and it is interesting to note that of fifteen leading items of provisions exports, only six increased in value. These were live hogs, fresh beef, tallow, hams, pork and cheese. Specially large decreases were shown in our shipments of live cattle, canned beef, bacon, lard, oleo oil, artificial and naturally made butter. As to the first item, it may be said that the lifting of the British embargo on Argentine cattle shipments and the competition of this probably cheaper product were largely responsible. High prices for our bacon probably affected that article of export, which decreased 30 per cent. in quantity and 27 per cent. in value, and accounted for more than half the decrease in exports of all provisions. The cutting down of our canned-meat exports from 64,104,725 pounds in 1906 to only 15,644,013 pounds in 1907 looks serious, and the loss in value was fully $5,000,000, while the proportions of loss in quantity and value were respectively 76 and 75 per cent. There is a disposition to charge this entire decrease to the agitation about slaughtering conditions, but exports of dairy butter were more than cut in two, and the butter trade could hardly have been affected by this agitation, while, as shown above, cheese escaped. The increases in exports of hams and pork, while bacon and lard decreased, are of special interest. Just what effect high prices had on the various branches of our export trade, and what proportion was assignable to other causes, can hardly be definitely stated at this time.

More or less attention has been directed to the recently created coastwise steamship combination incorporated under the title of the Consolidated Steamship Lines, by reason of a rather sudden and rapid advance in the quotations for its securities on the New York curb market. The 4 per cent. collateral trust bonds of that organization have advanced from around 25 or less to over 30, and the stock, which had been dealt in at 3 to 4, has sold during the present week at as high as 6. Wall street, moreover, has heard a variety of rumors relative to the organization, coupled with intimations that the financial interests which were behind it had decided upon an aggressive manipulative campaign in these securities. Among the other reports on this head was one to the effect that the earnings of the various steamship lines of which it had acquired control were not only very satisfactory, but were increasing to such an extent that the concern was likely to exhibit an ability to pay a dividend on the stock. Furthermore, it has been stated in well-informed circles that the recent purchase of control of the Central of Georgia Railroad from the Southern Railway was effected in the interest of the Consolidated Steamship Lines and would give the latter practical ownership of the very important Savannah Steamship Line. How this may be is of course unknown, but it would seem to afford a plausible explanation of the Central of Georgia sale. Meantime it is to be observed that the Consolidated Steamship Lines has moved in the direction of increased rates for its service, the Metropolitan Steamship Company, one of its subsidiary organizations, having raised the water rate for freight transportation between Boston and New York to a parity with the cost of railroad shipments between those points.

Demands for money at interior points have already made their appearance and are, it seems, relatively larger than are usually experienced at the present season. A year ago, for instance, funds were still coming from outside cities to New York, but in the present instance the banks at the latter city are being called upon to supply requirements, which, though not very large in the aggregate, constitute a decided feature. It has also been pointed out that western cities, at which supplies of money had recently been so abundant that they were liberal discounters of commercial paper offered by the eastern centers, are now apparently fully loaned up, so that even a 6 per cent. rate for the highest class of such instruments is no longer attractive. It is true that the rates for call loans at New York remain comparatively low. During the present week 2½ per cent. has been the prevalent rate for renewals of such borrowings by stock-exchange interests. Time money, however, continues very firm, the prevalent rates at the end of the week for six months' accommodation on collateral being firmly held at 6 per cent. In estimating the money market probabilities for the autumn, the attitude of lenders is, in fact, mainly regulated by the expectation that interest rates will continue firm for the balance of the year, although there is a certain amount of hopefulness among borrowers on account of the prospects for a large export trade in grain and cotton during the coming season, which would naturally offer an inducement to international bankers to put out finance bills.

Last week's further reduction in the prices at which large producers of copper and selling agencies were ready to dispose of the metal have not brought about as yet any real change in the copper situation. There have been no very large sales reported, and the fact seems to be that while the demand is still very limited, there has also been a failure on the part of the producers to fully estimate the amount of the metal which is on hand with consumers. Furthermore, the disposition on the part of the latter seems to be to maintain their attitude of unwillingness to enter the market and to buy to any large extent until there has been a further decided reduction in the price. It is understood, however, that the larger mining concerns and the firms and corporations which handle such a large proportion of the country's copper output are equally decided in their determination to withstand any additional lowering of prices, the contention on their part being that the concessions already announced are fully adequate to meet the exigencies of the case, the belief in such quarters being that with a little further delay the consumers will be obliged to reënter the market and replenish their stocks at present figures. It is intimated, however, that some of the smaller mines have sold limited lots of the metal at quotations below those established by the leading producing interests, although the amounts involved have been too small to make any special impression. It seems, in fact, that the deadlock in the copper trade which existed before the principal producers announced the first reduction in prices, a fortnight or more ago, is being kept up at the present quotation, the outcome being, on the whole, uncertain.

Some additional features brought out in the Canadian census of 1905 are at hand showing the great progress the Dominion is making along industrial lines. They will be found summarized in the following table:

	1900	1905	*Inc., p. ct.*
Capital employed	$446,916,487	$843,931,178	88.8
Wage earners	344,035	391,487	13.6
Wages paid	$113,249,350	$164,304,490	45.1
Value of product	$481,053,471	$717,118,092	49.0

From these returns we learn that the capital employed in Canadian manufacturing industry in 1905 aggregated $843,931,178, a gain of 88.8 per cent. over 1900, while the value of product has gained by 49 per cent., the wages paid have increased 45 per cent., and the number of persons employed has gained by 13.6 per cent. The apparent disparity in the ratios of increase in capital and value of product is explained in an accompanying note to be due to the inability of recently established works to produce to their full capacity. In cars and car works, for example, the ratio of production to capital in 1900 was 151, and in 1905 it was 101; in Portland cement works it was 86 and 15, in smelting works it was 67.5 and 32.5, and in electric-light works it was 17 and 9 for each year respectively. The five years have been a growing period in industrial investment, and the full results are not yet realized. It is to be noted that the logging industry employs the largest amount of capital — just short of $100,000,000 — followed by the smelting industry with $87,000,000 capital, and electric light and power industries are third with $80,000,000 of capital. The logging industry pays the largest sum in wages—$21,028,919—while the electric light and power works, with capital employed second only to logging, pay the strikingly small sum of $1,460,418, being surpassed by nearly thirty other industries. Explanation of this is, of course, found in the comparatively small value of product of the electric-light industry, which is less than that of at least twenty-three other lines of industry. In the five years the number of employees increased by 47,452, the amount of wages by $51,145,140, and the average wage per employee by $90.74, or 27 per cent. The value of product per employee in the year 1900 was $1,398, and in 1905 it was $1,832, being an increase of $434, or 31 per cent.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Railroad—Charter—Character.

The Supreme Court of Illinois held, in the case of City of Aurora et al. vs. Elgin, etc., Traction Company, that where an electric railway company was chartered under the General Railway act, and by its charter was authorized to operate between two cities and transport passengers, mail, express and other matter, it was a commercial railroad and not a street railroad.

Insurance—Assessment—Void Notice.

The Supreme Court of North Carolina held, in the case of Duffy vs. Fidelity Mutual Life Insurance Company, that a by-law of an insurance company to the effect that the mailing of notices of assessment may be conclusively shown by the certificate of an officer of the corporation who is not required to be personally cognizant of the fact is unreasonable and void.

Note—Writing—Indorsement.

The Supreme Court of Minnesota held, in the case of Mullen, Administrator, vs. Jones, that a writing on the back of a promissory note by the payee which guaranteed the payment of the note at maturity and waived notice of demand and non-payment was an indorsement in a commercial sense, and made the person to whom it was transferred an indorsee under the law merchant.

Notice—Custom—Mailing.

The Supreme Court of Tennessee held, in the case of Kavanaugh vs. Security Trust, etc., Insurance Company, that the mere mailing of a notice properly addressed and stamped is not, in the absence of a statute or contract provision, a compliance with a custom to give notice of the maturing of a note given for an insurance premium where the letter never reaches its destination, although the custom has been to give notice by mail.

Corporation—Dissolution—Stockholder.

The Supreme Court of Alabama held, in the case of Ross vs. American Banana Company, that where a private business corporation has failed of the purposes and objects of its creation, a single stockholder may maintain a bill in equity for the dissolution of such corporation and the distribution of its assets among those equitably entitled thereto, and that such a bill may be maintained whether the corporation is solvent or insolvent, but that under such a bill the remaining stockholders are necessary parties.

Creditor—Mortgage—Preference.

The Kentucky Court of Appeals held, in the case of Krist et al. vs. Kentucky Jeans Clothing Company, that in order that a creditor may obtain relief against a mortgagor of his property, under sections 1910 and 1911 of the Kentucky statutes, upon the ground of a fraudulent preference of his creditors, he must file his petition therefor within six months after such mortgage is lodged for record, alleging that the mortgage was made in contemplation of insolvency and with the design to prefer certain creditors to others.

Bank—Check—Dishonor—Damages.

The Court of Appeals of the District of Columbia held, in the case of The Columbia National Bank of Washington vs. MacKnight, that the contract implied by law between a bank and a depositor is that the bank will hold the funds and pay them out on the order of the depositor; that for breach of the duty imposed thereby the bank is liable either in tort or upon contract; that a breach of the contract between a bank and its depositor by dishonoring a check entitles the latter to substantial damages; that the dishonor by a bank of one check does not preclude the depositor from drawing other checks, and that in an action by the depositor against the bank, evidence of the wrongful dishonor of each separate check drawn by him against his deposit is properly admitted.

Contract—Services—Corporation.

In a case recently decided by the United States Circuit Court of Appeals for the Second Circuit, it appeared that the defendant employed the plaintiff to assist him in building up a business under a parol contract to the effect that the plaintiff was to draw his necessary expenses, and that the balance of his compensation should be determined at a future time when the plaintiff had proved his worth in the business, and that the plaintiff should consider that he was "in with" defendant in the business and that it was half his own. After the business began to succeed the defendant formed a corporation in order to better conduct the same and became the owner of all the stock, plaintiff being elected president, treasurer and one of the directors, which offices he continued to hold until he resigned. No action was ever taken by the corporation with reference to the payment of salaries, and no salary was ever fixed during the plaintiff's employment. The court held (Bonsall vs. Platt) that the plaintiff's services rendered after the organization of the corporation were rendered under the original contract, and that the organization of the corporation did not relieve the defendant from liability therefor.

City Charter—Licensing Auctioneers.

The charter of the city of Duluth, Minn., gives to the common council of the city power to license and regulate auctioneers, and to regulate the time, place and manner of holding public auctions or vendues. In the exercise of this power the city council enacted an ordinance providing for the licensing of auctioneers, and, further, that such license should not authorize the licensee thereunder to conduct any auction sale of jewelry or watches. The Supreme Court of Minnesota held, in the case of State ex rel. Cook vs. Bates, that the ordinance was valid.

Railroad—Engineer—Negligence.

In the case of St. Louis & San Francisco Railroad Company vs. Dewees, decided by the United States Circuit Court of Appeals for the Eighth Circuit, it appeared that a wrecked train, of which the appellee's intestate was the engineer, being unable to conform to the regular schedule, was being run under special telegraphic orders directing it to run late according to a special schedule therein given. The train dispatcher who issued the order testified that it "simply set the train back," and a general rule of the company, of which the engineer had knowledge, required him to run "steadily and uniformly, adhering as closely to time as due regard for safety permits." The court held that such special orders should be construed merely to require the engineer to adhere to them as closely as due regard for safety permitted, and did not abrogate the standing rules of the company requiring engineers on approaching switches to know that they were in proper position, etc.

Taxation—Notes—Non-Resident.

The Supreme Court of the United States held, in the case of Buck vs. Beach, that the state of Indiana could not consistently with due process of law tax debts evidenced by notes given and payable in Ohio by residents of that state to a resident of New York for loans made in Ohio on lands there situated, merely because in the attempt to escape proper taxation in Ohio such notes, together with mortgages securing their payment, were sent to an Indiana agent of the payee, there to be held by him until they were needed in Ohio to have payments of interest indorsed or to be delivered up if the principal were paid. The court said: "We cannot assent to the doctrine that the mere presence of evidences of debt, such as these notes, under the circumstances already cited, amounts to the presence of property within the state for taxation. * * * If payment of these notes had to be enforced it would not be to the courts of Indiana that the owner would resort. He would have to go to Ohio to find the debtor as well as the lands mortgaged as security for the payment of the notes."

Constitutional Law—Telegram—Delivery.

The Supreme Court of Appeals of Virginia held, in the case of Western Union Telegraph Company vs. Chiles, that section 1294h, clause 6, of the Code of Virginia of 1904, imposing a penalty on telegraph companies for failure to deliver messages in so far as it applied to a message sent from a point within the state to a naval officer in the Norfolk navy yard, which was under the exclusive jurisdiction of the federal government, was not in violation of the commerce clause of the Federal Constitution as an attempt to regulate commerce within the states. The court said: "The telegraph company was doing business in the state. The contract to deliver was made in the state. The fact that the message was to be delivered at a point over which the state had no legislative jurisdiction would not render the act unconstitutional unless forbidden (which, as we have seen, it was not) by the federal or state constitution; for it is well settled that all subjects of legislation not prohibited by the federal or state constitutions are within the discretion of the General Assembly."

BUSINESS NOTES.

The World's Wheat Crop.

Estimates and forecasts of the wheat crop of the world for the year now opening are offered by Broomhall. From the details of the exhibits now presented and from previous data, the *Price Current* submits averages for ten years prior to 1907, with the comparisons for 1907 and 1906, for the world's general divisions, in bushels:

	1907	1906	10-*yr. av'ge*
Europe	1,656,000,000	1,830,000,000	1,626,000,000
All America	824,000,000	938,000,000	839,000,000
Asia	372,000,000	383,000,000	339,000,000
Africa	56,000,000	56,000,000	52,000,000
Australasia	84,000,000	74,000,000	54,000,000
Total	2,992,000,000	3,281,000,000	2,910,000,000

Carrying the application of the details further, the *Price Current* finds the following comparisons of yearly wheat production for Europe, for all other countries and the total, in bushels:

	Europe	*Other*	*Total*
1897	1,153,000,000	1,138,000,000	2,291,000,000
1898	1,587,000,000	1,341,000,000	2,928,000,000
1899	1,513,000,000	1,114,000,000	2,627,000,000
1900	1,485,000,000	1,178,000,000	2,663,000,000
1901	1,475,000,000	1,309,000,000	2,784,000,000
1902	1,813,000,000	1,338,000,000	3,151,000,000
1903	1,870,000,000	1,366,000,000	3,236,000,000
1904	1,710,000,000	1,221,000,000	2,931,000,000
1905	1,820,000,000	1,388,000,000	3,208,000,000
1906	1,830,000,000	1,451,000,000	3,281,000,000
1907	1,656,000,000	1,336,000,000	2,992,000,000

Flax Crop Not Late.

According to the Duluth *Commercial Record*, "the talk about this year's flax crop being any later than usual is all nonsense, as the last flax put in this spring was at about the same time as usual, June 20 to 25, and seeding had begun in many places as early as May 15 to 25, while the great bulk of the crop was seeded between June 1 to 10. Flax requires from eighty to ninety days to mature from the time it is put in the ground, depending on the season. This would bring the maturity of the crop somewhere between August 20 and September 10, with an average probably around September 1. As a comparison we cite the condition of last year's crop, when only about 50 per cent. of it was matured and ready to be cut September 1; the balance required from one week to three weeks to mature. August frosts, of course, are always to be feared, but even at that it will require a severe frost to hurt flax that is once in the boll, and we are not liable to have that kind of a frost in August. At the present time there are hundreds of thousands of acres of flax in blossom, and that means about forty to fifty days to the rich brown color that spells 'matured flax.'"

Shipbuilding.

From returns compiled by *Lloyd's Register of Shipping*, it appears that, excluding warships, there were 564 vessels of 1,250,318 tons gross under construction in the United Kingdom at the close of the quarter ended June 30, 1907. Particulars follow:

	June 30, 1907		*June* 30, 1906	
Steam	*No.*	*Gross tonnage*	*No.*	*Gross tonnage*
Steel	500	1,235,730	521	1,395,294
Iron	1	500	1	500
Wood and composite	..	....	1	13
Total	501	1,236,230	523	1,395,807
Sail				
Steel	43	13,149	31	12,212
Wood and composite	20	939	15	1,437
Total	63	14,088	46	13,649
Total steam and sail	564	1,250,318	569	1,409,456

The total is 50,000 tons less than at the end of the previous quarter, and is 150,000 tons less than the tonnage building twelve months ago. The following is a statement of the shipbuilding in progress in the three principal maritime countries outside the United Kingdom:

	1907, *Tons*	1906, *Tons*	1905, *Tons*
United States	117,256	124,237	35,682
Germany	278,762	269,238	227,216
France	106,396	32,528	60,005

Holland had under construction at the end of June 68,852 tons, Italy 64,120 tons and Japan 65,698 tons.

Sawmills and Planing Mills.

At the census of 1905 the number of sawmills reported was 18,277, and their combined capital was $381,621,184. They furnished employment on the average to 223,674 wage earners, paid $100,310,891 in wages, consumed materials costing $263,865,101, and manufactured products to the value of $491,524,662. In this industry Wisconsin ranked first according to the value of products, Washington second, Michigan third, Louisiana fourth and Pennsylvania fifth. In 1900 Wisconsin was second, Washington sixth, Michigan first, Louisiana eleventh and Pennsylvania third. A classification of the mills according to the quantity of lumber cut indicates that between 1900 and 1905 the capacity of the average mill materially increased. Mills cutting 1,000,000 feet or more annually formed 33.3 per cent. of the total number in 1905, as contrasted with 30.6 per cent. in 1900. The principal products of the sawmills, with their values, were as follows: Rough lumber, $435,708,084; shingles, $24,009,610; hoops, $3,159,973; staves, $19,082,641; headings, $7,436,259, and laths, $5,435,968. The number of planing mills reported in 1905 was 9,486, and their combined capital was $222,294,184. They employed 132,030 wage earners, paid $66,434,440 in wages, consumed materials costing $273,276,381, and manufactured products valued at $404,650,282. In the value of products of this industry New York ranked first, Wisconsin second, Pennsylvania third, Minnesota fourth and Illinois fifth. The high rank of New York in the planing-mill industry is due almost entirely to the magnitude of the operations of its independent planing mills.

Copper and Brass Industry.

New Jersey leads all the other states of the Union as regards the copper-smelting industry. In its report just made public for the year 1905 the Census Bureau at Washington shows that in that twelve months' period the value of the product refined and smelted in New Jersey—$62,795,613—was 26.1 per cent. of the entire valuation of the industry of the country—$240,780,215. The growth of the industry in five years and the percentage of the states most actively engaged in smelting and refining copper is shown best in the following tabulation:

	1905	1900	*Per ct. total* 1905	1900
United States	$240,780,216	$165,131,670	100.0	100.0
New Jersey	62,795,613	38,365,131	26.1	23.2
Montana	*	36,387,063	..	22.0
Arizona	22,761,981	17,286,517	9.4	10.5
Michigan	21,222,217	17,340,041	8.8	10.5
Utah	8,498,956	†	3.5	..
Colorado	*	3,893,634	..	2.4
California	2,583,524	4,508,259	1.1	2.7
Other states	122,917,925	47,351,625	51.1	28.7

* Included in other states. † Not reported separately.

The value of the brass and copper wire industry in 1905 was $19,657,743, against $4,278,635 in 1900. In 1905 a total of 1,406 short tons of copper rods were manufactured, valued at $463,057. In the same time 25,966 short tons of copper wire were turned out, having a value of $7,252,917. The value of brass and bronze manufactures and rolled copper for three different years compares as follows:

	1905	1900	1890
Brass	$700,772	$1,410,817	$2,549,860
Brass and rolled copper	51,912,853	44,309,829	8,381,472
Brass castings	29,671,928	23,891,248	24,344,434
Bronze castings	2,622,495	2,229,329	1,165,163
Total brass (not including wire mentioned above)	102,407,104	88,653,987	50,656,101

Pennsylvania's Railway Fare Law.

On July 11 testimony was taken in the case brought by the Pennsylvania Railroad to test the constitutionality of the 2-cent fare law of Pennsylvania. One of the principal witnesses in the Common Pleas Court of Philadelphia was Max Riebenack, comptroller of the Pennsylvania Railroad, who submitted a summary of the earnings and expenses of the intrastate passenger business of the Pennsylvania for the first three months of the current calendar year, which follows:

Class	*Passengers*	*Amount*	*Av'ge rate per pass. per mile*	**At 2 cents*
One way	2,810,690	$1,084,982	2.406	$991,815 †183,167
Round trip	2,198,143	595,997	2.109	565,262 †30,734
Commutation	4,163,644	399,254	1.046	399,254
Mileage tickets	1,080,294	990,701	2.000	990,701
Total	10,252,771	3,070,935	1.007	2,857,033 †213,901
Expenses	....	2,921,607	....	2,921,607

* If one-way, excursion and round-trip tickets had been sold at 2 cents per mile revenue would have been as shown in last column. † Loss.

Based upon the experience of the first quarter, Mr. Riebenack submitted a second table showing his estimate of operations for the whole of the current year, calculating that the railroad would carry this year 216,782,449 passengers one mile one way, producing at the old average rate of 2.406 cents per mile $5,216,261.39, but at the new rate of 2 cents a mile only $4,335,648.98; 135,880,476 round-trip passengers one mile producing at old rate of 2.109 cents per mile $2,865,371.68, but under the new rate only $2,717,609.52; 183,514,697 commutation passengers one mile at the old rate of 1.046 cent per mile producing $1,919,493.27; 238,149,344 mileage passengers at present rate of 2 cents a mile producing $4,762,986.88, the total being $14,764,113.22 under the old rates and but $13,735,738.65 under the new rate, thus showing a total loss under the 2-cent fare act of $1,028,374.57 a year.

CURRENT BUSINESS NEWS.

Commercial.

It is announced that farm lands in New York state have declined $170,000,000 in the last twenty-five years, and that there are now within its borders 12,000 abandoned farms, capable of caring for a population of 250,000. But within the past three years a reaction to the farm has set in. The telephone, the trolley and the free rural delivery service have all helped to break down the isolation which was the chief drawback to country life and to make living on the farm more attractive and easier.

The Prussian official report makes the condition of winter wheat 70, against 66 last month and 84 last year. Spring wheat, 82, against 80 last month; rye, 76, against 74 last month and 80 last year; oats, 84, against 82 last month.

Canadian exports of wheat last season were disappointing, notwithstanding the claims of large export sales. Deducting the United States exports from the total from both coasts for twelve months shows Canadian shipments of only 24,464,000 bushels, against 37,428,000 last year.

Preliminary estimates of the average wheat yields in nineteen Kansas counties show an average of 13.56 bushels to the acre for about 1,250,000 acres. Eleven of the nineteen counties are important wheat counties and they seem to fairly represent average conditions in the state. A similar average yield over the entire state, figuring the area reported by Secretary Coburn as remaining June 1 for harvest, would make a total yield of 71,500,000 bushels.

Commenting on the cotton situation, Ellison's Liverpool circular of July 8 says: "The prevailing weather conditions have had a disastrous effect upon the spring and summer trade in the United Kingdom and upon the continent, the effects of which are manifest in Manchester and upon the spot markets. A stoppage of looms has been brought about by the present scarcity and high price of yarns, which spinners are threatening to counteract by a reduction of output between now and October. As a whole, the situation is decidedly complex, but with consumers holding unusually large supplies, unprecedented stocks at the ports, and with the distributing markets of the world showing unmistakable signs of repletion, nothing short of an absolute crop disaster can warrant any further upward tendency in values, while average weather conditions from now onward over this season's acreage can only be followed by a marked fall from the current high level of prices."

The government crop report on the acreage and condition of tobacco on July 1 follows, acreage being expressed as a percentage of the area last year, and the condition on July 1:

Type and district	*Per cent., acreage*	*Cond'n July 1, p. ct.*
I—Cigar type:		
New England	101	88
New York	100	87
Pennsylvania	104	85

Upper Cumberland district	75	69
Clarksville and Hopkinsville district	81	77
Virginia sun-cured	76	78
Virginia dark	86	80
Bright yellow:		
Old belt—Virginia and North Carolina	92	81
New belt—N. Carolina and S. Carolina	125	84
Maryland and eastern Ohio export	87	80
Perique—Louisiana	91	65

Wednesday was the tenth anniversary of the enactment of the Dingley tariff law. The collections of customs duties under the Dingley law in the decade ended Wednesday amounted to $2,527,698,826, these figures including all except the collections made in the last seven days of July, 1897, of which no separate record was kept. The largest revenue results of the Dingley law were realized in the fiscal year closed on June 30 last, when the collections amounted to more than $333,000,000, or more than $1,000,000 a day for every business day of the year. In the five years from 1901 to 1905 the customs receipts were $1,300,583,247, but the gain in value of manufactured products was in the same years $1,787,859,589. The total value of manufactures in 1905 was nearly $15,000,000,000. Should the Dingley law remain in force unamended until the spring of 1909 the total collections of revenue under its provisions will probably exceed $3,000,000,000.

French exports to the United States for the fiscal year ended June 30 reached the value of $129,908,400. The total includes France and Algeria, and represents an increase of $22,043,796. The exports from Paris alone were $64,143,479, an increase of $12,105,796. All these figures are unprecedented. Practically all the items throughout the list show an increase, but particularly automobiles.

According to Beerbohm, the consensus of opinion among the millers assembled at the Exeter Convention the second week in July was there would be very little new wheat available before September, which means that the season is about a month longer than last year.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—The very favorable weather conditions are forcing harvest, and prospects as a result show an improvement. France—The weather is now excellent and harvesting is progressing rapidly. The outlook is fair, as the crop is late. Germany—The weather has been generally unfavorable, causing further delay to harvesting. The harvesting of wheat is progressing slowly. Hungary, Bulgaria and Turkey—The unfavorable conditions as reported last week are about unchanged, with if any change slightly for the better. Roumania—Threshing returns confirm half a crop for wheat. Corn needs rain badly. Russia—There are further complaints regarding the outlook for the winter crops. Spring crops are generally favorable, but there are some complaints from the southwest as a result of heat and drought. Drought is also reported in the east, and in the Caucasus district the crop will be below expectations. Italy—Reports confirm good harvest. Spain—The outlook on the whole is favorable. North Africa—The outlook is satisfactory. Australia—Reports are of a satisfactory outlook.

Our crop of wheat, exports thereof, and the world's exports compare as follows, three figures being omitted from the crop and export columns:

Season	*United States Crop*	*Exports*	*World's Crop*	*Exports*	*U. S. p. ct. exports*
1906-07	736,000	146,000	3,400,000	560,000	25
1905-06	692,000	96,000	3,316,000	536,000	18
1904-05	552,000	44,000	3,148,000	520,000	8
1903-04	640,000	120,000	3,187,000	529,000	23

Broomhall estimates the probable world's import requirements at 580,000,000 bushels during the coming season, and figures that the United States can be expected to send only 100,000,000, or about 17 per cent. of the total.

The Minister of Finance of Uruguay, Señor Vidal, is preparing a new tariff law. Abandoning the protectionist policy he will recommend free import of all products not produced within the country and a reduction of duties on agricultural machines and articles liable to be introduced as contraband.

According to the Japanese Department of Agriculture and Commerce, the exports of apples, dried pepper, dried ginger, sweet pepper, onions, potatoes, lily bulbs, plants and grasses (or their roots) for gardening purposes, etc., are as follows: 1901, 1,023,135 yen; 1902, 1,253,331; 1903, 1,674,876; 1904, 1,539,824; 1905, 1,834,653; 1906, 3,392,581. The authorities add that the exports were gradually increased through the encouragement of the government. During the late war business was dull.

French exports into the United States for the fiscal year of 1907 are declared at the American consulate to amount to $129,044,567, an increase of $22,043,813 over the last fiscal year. The largest increase is recorded at Paris and amounts to $12,105,796, and next comes Lyons with $2,592,654. This growth of exports is not confirmed by the movement in articles of special manufacture, but it is in general consistent with the increase in the movement of every class of merchandise in France.

The Weather Bureau at Washington issued its usual weekly summary of the weather in the crop country of the United States Tuesday. It was as follows: Cooler weather prevailed in the Rocky mountain and plateau region and in the upper Missouri valley during the week ending July 22. Light frosts occurred during the fore part of the week in portions of the middle and southern plateau regions. Over the central and eastern portions of the country it was warmer than usual. Portions of the Missouri and upper Mississippi valleys suffered considerably from heavy rains, while Oklahoma and portions of Texas, Missouri, Tennessee, North Carolina and Massachusetts need rain. As in the previous week, severe local storms were confined to the central and northern districts, the southern states being practically free from storms of this character. In the Dakotas, Minnesota and Iowa there was generally less than the usual sunshine, and there was considerable cloudiness in the south Atlantic states and on the north Pacific coast. Elsewhere there was abundant sunshine, the percentage being unusually high in the central and west gulf states.

The President on Thursday signed a proclamation informing the public of the conclusion of the Dominican treaty. Similar action was taken the same day in Santo Domingo by President Caceres. Under the provisions of the treaty the United States is to name a receiver-general and an assistant for the collection of the Dominican revenues.

B. W. Snow sends the following from Winnipeg: "Manitoba and south Saskatchewan wheat very poor. Too dry all spring. Many fields being plowed up for summer fodder. Central Saskatchewan, Alberta, crop good, but full two weeks late. Heads just showing. Frost before September 10 will catch it all. Northwest Canada will not exceed 65,000,000 bushels at best. Oats bad in Manitoba and fair but late west."

The Consul-General of Colombia at New York has received cable advices from Bogota announcing that the Colombian government has issued a decree granting a premium, or bonus, on all exports of coffee, cotton, rubber and tobacco, which can be advantageously produced in the country, and which find one of their readiest markets in the United States. In fact, the United States takes much over 50 per cent. of the total quantity of these products exported.

The French government has notified Ambassador White that American meats may be brought into France upon the American certificates, and that microscopic examination will not be insisted upon. This ruling, however, is only temporary.

Financial.

Bank losses in New York are very, very small, and officials of long experience declare that if statistics were to be compiled on the matter it would be found that the losses amount to less than one ten-thousandth of 1 per cent. Many of the banks in New York City are said to be so well safeguarded that not even an executive officer, except in isolated cases, has single access to funds.

The General Electric Company announces that the entire issue of $13,000,000 5 per cent. ten-year convertible bonds, the first payment on which fell due last Saturday, has been subscribed for.

The New York County National Bank has declared a special equalizing dividend of 150 per cent. to stockholders of record July 15.

On Wednesday a seat on the Stock Exchange sold for $71,500, which is $1,500 less than the price brought at the last sale a few weeks ago.

The South Manchurian Railway loan of £4,000,000, issue price 97, interest 5 per cent, bonds repayable in twenty-five years and guaranteed by the Japanese government, has proved a fiasco, according to a London dispatch. It is officially admitted that the underwriters are saddled with about one-half of the total of the loan.

It is officially announced that Uruguay's financial year closed with a balance in the treasury of 2,500,000 pesos gold.

With reference to the success of German banking operations abroad, Consul-General Guenther writes from Frankfort: "The annual report of the Deutsche Ueberseeische Bank (German Trans-Oceanic Bank) indicates the development of German financial and commercial spirit, to which is due the commanding position which Germany in a comparatively short time has gained in the world's market and as an ocean carrier. This financial company, only organized a few years ago, has increased its share capital by 50 per cent., enhanced its profits, and in a still greater measure extended its business operations. The bank now has twenty-three branches, which are located in Chile, Bolivia, Peru, Argentina, Uruguay, Mexico and Spain. Its paid-in share capital last year was 17,600,000 marks (mark, 23.8 cents), on which the net profits in 1906 amounted to 2,368,000 marks."

It is stated that it cost the Westinghouse Company nearly $900,000 to float its last issue of $6,000,000 of bonds.

The New York State Senate on Wednesday passed a bill permitting Comptroller Metz to sell at private sale New York city bonds which remain unsold after a public sale.

The Brazilian loan, which was to be floated in England, has been postponed until October.

Industrial.

The Seattle correspondent of the *Iron Trade Review*, under date of July 10, says: "The new blast furnace which is being built at Irondale, near Port Townsend, Wash., will be in operation within thirty days. The plant, which will have a capacity of sixty tons per day, is the only blast furnace in American territory west of the Rocky mountains, and will make high-grade, pure charcoal pig exclusively. The charcoal, which is more economical and satisfactory on this coast than coke, will be made of fir and alder logs taken from the forests adjacent to the works. The plant has twenty charcoal kilns twenty by thirty feet with a capacity of seventy-five cords of wood, and can make charcoal for 4½ cents per bushel."

The New York State Museum has just issued a bulletin on the mining and quarrying industries of the state for 1906. That the value of the total output should reach an amount in excess of $37,000,000 will probably surprise those who are not familiar with the state's mineral resources. The items which pass the million-dollar mark are as follows: Portland cement, $2,766,488; natural rock cement, $1,184,211; building brick, $9,688,289; pottery, $1,795,005; other clay products, $2,472,003; iron ore, $3,393,609; mineral waters, $1,000,000; petroleum, $1,721,095; salt, $2,131,650; limestone, $2,963,829; sandstone, $1,976,829. Among numerous minor products, it is noted that arsenical ore has been worked commercially for the first time. The grand total in 1906 was $37,118,430, as against $35,470,987 in 1905 and $28,812,595 in 1904.

Railroads.

An idea of the increasing cost of railroad supplies may be seen from statistics furnished by the Pennsylvania Railroad. The increases over cost in 1906 for this year's supplies are as follows: Steel angles 31 per cent., bronze journal bearings 25 per cent., copper 22 per cent, freight-car wheels 21 per cent., malleable iron castings 20 per cent., brass and tin 16 per cent., car axles and crossties 12 per cent., rail braces 8 per cent., white-pine lumber 8 per cent. and airbrake hose 7 per cent.

Miscellaneous.

One of the postal laws provides that "any person who shall knowingly conceal or inclose any matter of a higher class in that of a lower class, and deposit or cause the same to be deposited for conveyance by mail at a less rate than would be charged for both such higher and lower class matter, shall for every such offense be liable to a penalty of $10." The provisions of this statute admit of no waiver, the law officers holding that the penalty is due upon commission of the offense and does not depend upon the intent of the sender. During the last fiscal year post-office inspectors collected $59,065 for such violations. In thousands of cases a short note or memorandum was placed inside a package of merchandise on which postage was paid at 1 cent an ounce, while the written matter made it necessary that 2 cents an ounce should have been paid. Finding that in a great number of cases the offense was due to ignorance of the law and that the collection of the fine usually works a hardship to the poor, especially where written messages are made in returning coupons, tags and certificates for premiums, Postmaster-General Meyer has directed that proper notices be placed in post offices warning the public against the practice.

The Denver *Republican* says that "Denver is the natural convention city of the country; that it is here the fraternities and organizations that hold annual meetings should head if they want their delegates to enjoy an outing and get the most out of the coming together. Nature has given Denver much the best of it in this particular. This climate, the pure and rarefied air, the cool nights, the nearby scenic wonders, the historic past of the great west, all blend to provide the right place for meeting, and man has supplied a city of broad, well-paved streets, splendid hotels, and all the modern day conveniences of living. Colorado has been firmly established in the itinerary of the tourists. They come now whether there are conventions to attend or not. The railroads into the hills are hauling more passengers and doing more business than last year, and more through tickets have been deposited at the union depot. It is proof that people want to come to this state for their summer outings, and the organizations cannot do better than to recognize the fact in selecting their place of meeting."
